**Über dieses Buch**

Dies ist ein digitales Exemplar eines Buches, das seit Generationen in den Regalen der Bibliotheken aufbewahrt wurde, bevor es von Google im Rahmen eines Projekts, mit dem die Bücher dieser Welt online verfügbar gemacht werden sollen, sorgfältig gescannt wurde.

Das Buch hat das Urheberrecht überdauert und kann nun öffentlich zugänglich gemacht werden. Ein öffentlich zugängliches Buch ist ein Buch, das niemals Urheberrechten unterlag oder bei dem die Schutzfrist des Urheberrechts abgelaufen ist. Ob ein Buch öffentlich zugänglich ist, kann von Land zu Land unterschiedlich sein. Öffentlich zugängliche Bücher sind unser Tor zur Vergangenheit und stellen ein geschichtliches, kulturelles und wissenschaftliches Vermögen dar, das häufig nur schwierig zu entdecken ist.

Gebrauchsspuren, Anmerkungen und andere Randbemerkungen, die im Originalband enthalten sind, finden sich auch in dieser Datei – eine Erinnerung an die lange Reise, die das Buch vom Verleger zu einer Bibliothek und weiter zu Ihnen hinter sich gebracht hat.

**Nutzungsrichtlinien**

Google ist stolz, mit Bibliotheken in partnerschaftlicher Zusammenarbeit öffentlich zugängliches Material zu digitalisieren und einer breiten Masse zugänglich zu machen. Öffentlich zugängliche Bücher gehören der Öffentlichkeit, und wir sind nur ihre Hüter. Nichtsdestotrotz ist diese Arbeit kostspielig. Um diese Ressource weiterhin zur Verfügung stellen zu können, haben wir Schritte unternommen, um den Missbrauch durch kommerzielle Parteien zu verhindern. Dazu gehören technische Einschränkungen für automatisierte Abfragen.

Wir bitten Sie um Einhaltung folgender Richtlinien:

+ *Nutzung der Dateien zu nichtkommerziellen Zwecken* Wir haben Google Buchsuche für Endanwender konzipiert und möchten, dass Sie diese Dateien nur für persönliche, nichtkommerzielle Zwecke verwenden.

+ *Keine automatisierten Abfragen* Senden Sie keine automatisierten Abfragen irgendwelcher Art an das Google-System. Wenn Sie Recherchen über maschinelle Übersetzung, optische Zeichenerkennung oder andere Bereiche durchführen, in denen der Zugang zu Text in großen Mengen nützlich ist, wenden Sie sich bitte an uns. Wir fördern die Nutzung des öffentlich zugänglichen Materials für diese Zwecke und können Ihnen unter Umständen helfen.

+ *Beibehaltung von Google-Markenelementen* Das "Wasserzeichen" von Google, das Sie in jeder Datei finden, ist wichtig zur Information über dieses Projekt und hilft den Anwendern weiteres Material über Google Buchsuche zu finden. Bitte entfernen Sie das Wasserzeichen nicht.

+ *Bewegen Sie sich innerhalb der Legalität* Unabhängig von Ihrem Verwendungszweck müssen Sie sich Ihrer Verantwortung bewusst sein, sicherzustellen, dass Ihre Nutzung legal ist. Gehen Sie nicht davon aus, dass ein Buch, das nach unserem Dafürhalten für Nutzer in den USA öffentlich zugänglich ist, auch für Nutzer in anderen Ländern öffentlich zugänglich ist. Ob ein Buch noch dem Urheberrecht unterliegt, ist von Land zu Land verschieden. Wir können keine Beratung leisten, ob eine bestimmte Nutzung eines bestimmten Buches gesetzlich zulässig ist. Gehen Sie nicht davon aus, dass das Erscheinen eines Buchs in Google Buchsuche bedeutet, dass es in jeder Form und überall auf der Welt verwendet werden kann. Eine Urheberrechtsverletzung kann schwerwiegende Folgen haben.

**Über Google Buchsuche**

Das Ziel von Google besteht darin, die weltweiten Informationen zu organisieren und allgemein nutzbar und zugänglich zu machen. Google Buchsuche hilft Lesern dabei, die Bücher dieser Welt zu entdecken, und unterstützt Autoren und Verleger dabei, neue Zielgruppen zu erreichen. Den gesamten Buchtext können Sie im Internet unter `http://books.google.com` durchsuchen.

This is a reproduction of a library book that was digitized by Google as part of an ongoing effort to preserve the information in books and make it universally accessible.

## POSITIONS VACANT.

### COUNTY BOROUGH OF WEST HAM.

**Traffic Superintendent.**

Applications are invited from fully qualified persons for the position of Traffic Superintendent of the West Ham Corporation Tramways, at a commencing salary of £250 per annum, advancing by increments of £25 to a maximum of £300 per annum.

The person appointed will be responsible to the General Manager for the proper and efficient working of the Traffic Department.

Applications in candidate's own handwriting, stating age, experience and present position, and when duties could be taken up if appointed, together with copies of three recent testimonials, to be addressed to Mr. Lewis Slattery, General Manager, Tramway Offices, Greengate Street, Plaistow, E.13., endorsed "Traffic Superintendent," and must be received not later than Monday, 8th July, 1918.

GEO. E. HILLEARY,
Town Clerk.

Town Hall, West Ham, E.
26th June, 1918.

### METROPOLITAN BOROUGH OF HAMMERSMITH.

**Electricity Department.**

**Engineer-in-Charge.**

Applications are invited from properly qualified men for the position of Engineer-in-Charge. Salary, £175 per annum, rising by annual increments of £12 10s. to £200 per annum, plus war bonus of 20s. weekly and 12½ per cent. on earnings.

The appointment will be subject to one week's notice on either side. Applications, stating experience, and accompanied by copies of three recent testimonials, must be delivered to Mr. G. G. Bell, Engineer and Manager, Electricity Works, 85, Fulham Palace Road, Hammersmith, W.6, not later than July 12th, 1918.

Canvassing will disqualify.

LESLIE GORDON,
Town Clerk.

Town Hall,
Hammersmith, W.6,
June 26, 1918.

### SHIFT ENGINEER.

Shift Engineer wanted, for working seven eight-hour shifts per week, with experience in the operation of extra high tension alternating current and direct current supplies with converting plant and steam turbines. Experience with large gas engines would be a recommendation. Salary, inclusive of all bonuses, £195 per annum. Apply, with copies of three testimonials, stating age, and when at liberty, to the Engineer and Manager, Corporation Electricity Works, Accrington (Lancashire).

### CHARGE ENGINEER.

Charge Engineer required for Tramways sub-station, shift duties averaging 56 hours a week. Wages, 50s. a week, rising to 60s., plus war wages of 20s. and 12½ per cent. Applicants must be over 25 years of age and have a thorough knowledge of sub-station plant and operation. Apply by letter, giving age and particulars of previous experience, to the General Manager, London County Council Tramways, 23, Belvedere Road, S.E.1.

### SHIFT ENGINEER.

Shift Engineer wanted for sub-works with steam D.C. plant and rotaries. Salary £3. 3s. per week, inclusive of war wages, bonus, and allowances. Applications, stating age, and giving particulars of present position and previous experience, together with date on which appointment could be taken up, if successful, to the Borough Electrical Engineer, St. Peter's Chambers, Glebe Street, Stoke-on-Trent.

### FOREMAN PAVIOR.

Wanted, a working Foreman Pavior on Yorkshire tramways system. Wages, inclusive of bonus to date, 1s. 3d. per hour. Will be responsible for all work done on permanent way. Apply, giving full particulars as to experience, etc., to Box No. 28, THE TRAMWAY AND RAILWAY WORLD, Amberley House, Norfolk Street, London, W.C.2.

## MAXIMUM TRAMWAY FARES.

A great deal of very interesting information is to be found in the evidence which was recently heard by the Select Committee of the House of Commons who enquired into the expediency of allowing temporary modification of statutory tramway fares and charges. The report of the Committee was published recently, but it is now reissued, together with a record of the proceedings of the Committee and the official verbatim report of the evidence. It may be recalled that the Committee recommended that the Board of Trade should be empowered by general legislation to permit the temporary modification of statutory requirements with regard to the charges for the conveyance of traffic on tramways and railways constructed on roads in the case of undertakings whose financial circumstances are proved to have been injuriously affected by causes arising out of the war. When one examines the evidence in detail no surprise can be felt that such a conclusion was reached. The evidence was given by three witnesses, on behalf of the Tramways and Light Railways Association, and the Municipal Tramways Association. Full opportunity was afforded for other evidence to be tendered, but none was forthcoming. The witnesses put forward an unanswerable case, and showed that in this matter at least municipalities and companies see eye to eye. They adduced a mass of facts to show how enormously the working expenses and the cost of materials have increased, and demonstrated that though there has frequently also been an increase of revenue since the beginning of the war, it has been quite inadequate to meet costs which run up to as high as 200 per cent. above pre-war rates. A good deal of interesting matter will be found on the subject of statutory maximum fares, and on the variations in these maxima on different undertakings. Among other things, it is brought out that in the case of certain tramways there are statutory halfpenny fares for half-mile stages—a point which may be new even to some tramwaymen. In other cases the penny stage, as fixed, is unduly long. It was made clear that, speaking generally, it is the smaller undertakings which are most in need of liberty to raise their fares above the present maxima, as they have less density of traffic, but that even the larger undertakings are feeling the pinch and want to get present shackles removed. The most immediate call for relief is that for tramways which are now charging maximum fares, but yet are unable to pay their way. The witnesses maintained, and the Committee have taken the same right and proper view, that even though municipal tramways can fall back on the rates the passenger should not be carried at a loss. It is gratifying to find this elementary principle recognised in high places in these days of labour and socialistic influence. The Tramways and Light Railways Association, and the Municipal Tramways Association, are to be congratulated on the result of the movement which they have carried out. The former were early in the field, as they began representations on the subject to the Board of Trade as far back as November, 1916. At that time the trouble was not quite so acute as it is now, and it was only by repeated representations and interviews by both Associations that the Board of Trade was induced to move. Sir Albert Stanley, the President of the Board of Trade, of course knows the subject thoroughly, and is better able to appreciate the difficulties of tramway authorities than professional politicians can be expected to do. It is to be hoped that legislation based on the report of the Committee will speedily be passed. The case is one of urgency, and whatever is to be done should be done quickly. It is consequently gratifying to learn that a Bill, the text of which is given in another column, has been introduced to enable statutory provisions in respect of certain undertakings, including tramway undertakings and light railways constructed on public roads, and undertakings for the supply of gas, water, and electricity, to be temporarily modified.

## INCREASED FARES.

The new scale of fares that has been in force on the southern section of the London County Council tramways for some weeks, went into effect on the lines north of the Thames on Sunday last. The fares are now consequently three stages for a penny throughout the system, but the 4d. fare for the whole journey now in force in the south does not apply to the northern lines. The delay in applying the new scale to the northern lines was due to the arrangements for inter-running with other authorities which required modification.

At the suggestion of Mr. C. Raine, deputy chairman of the Hull Tramways Committee, it was decided at the last meeting that as the three months allowed for consideration of the question of fares had expired, a special meeting should be held to deal with the matter. Alderman Gillett expressed the opinion that there should be a reasonable margin of profit. At present they had halfpenny fares for people who were earning more money than ever before, and they were crowding out people who wanted penny tickets.

The Manchester Tramways Committee has settled the revised scale of fares. By the new schedule, passengers will be carried two miles measured from the centre of the city for a penny, and various stages have been re-arranged. Paper shortage, however, has placed the Committee in difficulties, as no tickets for the revised fares are available, and consequently it has been impossible to fix the date for their introduction. In the meantime the old fare will be continued.

The general manager of the Glasgow Corporation tramways has prepared a report for the Tramways Committee on the revision of fares. The Glasgow *Evening News* says that there is a section who are opposing any attempt to interfere with the present system, and any proposals that are laid before the Corporation for fare revision will not have a smooth course.

The recent increase in fares at Nottingham has been so successful in increasing the revenue, that it is probable that a further change will be made that will be of advantage to travellers. At present, the lowest fare is three-halfpence, but it is proposed to introduce short penny stages.

The revised schedule of fares came into force on the Belfast Corporation tramways on July 1. It is hoped with the new schedule to meet the estimated deficit with the old fares of £1,000 a week.

## INCREASE OF STATUTORY CHARGES.

The following is the text of the Bill, which has been presented by Sir Albert Stanley, to enable the statutory provisions affecting the charges which may be made in respect of certain undertakings, including tramways and light railways, to be temporarily modified.

Be it enacted by the King's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows :—

1.—(1) Where it appears to the appropriate Government Department that the financial position of any undertaking to which this Act applies has been adversely affected by circumstances arising out of the present war, the Department may, if they think fit, by order provide for the modification of any statutory provisions regulating the charges to be made by the undertakers, and of any statutory provisions consequential on or supplemental to any such provisions as aforesaid, for such period during the continuance of this Act, in such manner, and subject to such conditions, as appear to the Department to be just and reasonable :

Provided that—

(*a*) where the undertakers are a local authority no modification shall be authorised which will increase the statutory maximum charge by more than fifty per cent., or which is more than sufficient so far as can be estimated to enable the undertaking to be carried on without loss ; and

(*b*) in any other case no modification shall be authorised which is more than sufficient to enable a dividend on the ordinary stock or shares of the undertaking to be paid at half the standard or maximum rate of dividend, if any, prescribed for the undertaking, or at half the pre-war rate of dividend, whichever is lower.

(2) An application to a Department for the purposes of this Act shall be accompanied by such information, certified in such manner, as the Department may require with respect to the financial position of the undertaking in question.

(3) The undertakings to which this Act applies are tramway undertakings, including light railways constructed wholly or mainly on public roads, and undertakings for the supply of gas, water, and electricity.

(4) For the purposes of this Act—

The expression " statutory provisions " includes the provisions of any order having the force of an Act ;

The expression " appropriate Government Department " means, in relation to gas and water undertakings carried on by local authorities, the Local Government Board, and in relation to other undertakings the Board of Trade ;

The expression " local authority " includes any commissioners, trustees, or other public body of persons carrying on, otherwise than for purposes of private gain, any undertaking to which this Act applies ;

The expression " pre-war rate of dividend " means the average rate of dividend for the three financial years immediately preceding the war.

2. In the application of this Act to Scotland the Secretary for Scotland, and in the application of this Act to Ireland the Local Government Board for Ireland, shall be substituted for the Local Government Board.

3.—(1) This Act may be cited as the Statutory Undertakings (Temporary Increase of Charges) Act, 1918.

(2) This Act shall have effect during the continuance of the present war and for a period of two years thereafter, and no longer.

## SIEMENS BROTHERS AND COMPANY, LIMITED.

A BRITISH CONCERN.

SIR H. DALZIEL, in the House of Commons on Monday, asked the Prime Minister whether Mr. Chauvin, managing director of Siemens, who are Government contractors, is a German naturalised since the outbreak of the war ; whether his name was previously von Chauvin ; whether, on the winding up of the business as an enemy concern, it was a condition of purchase that Mr. Chauvin's services should be retained ; whether, in view of the close relations of this firm to the Government in the production of war material, he will consider the possibility of employing a manager who was British-born ; and whether Mr. Chauvin was also a director of the Deutsche Bank ?

SIR A. STANLEY : The Prime Minister has asked me to answer this question. Mr. Chauvin, whose name was previously von Chauvin, is of German birth and has been naturalised since the outbreak of war. So far as I am aware he has never been a director of the Deutsche Bank. On the sale of the shares of Siemens Brothers and Company, Limited, there was no condition with regard to the retention of Mr. Chauvin's services, and the agreement under which he now acts as managing director of the company was, I understand, entered into by the new directors appointed by the purchasers of the shares.

SIR H. DALZIEL : Will my right hon. friend answer that part of the question which asks whether there is no person of British birth who can do this important and delicate work ?

SIR A. STANLEY : It rests with the shareholders of the company. I have no control over the matter.

SIR E. CARSON : Is my right hon. friend satisfied that the purchase was a real purchase, and not a sham purchase, in order to keep the same German manager ?

SIR A. STANLEY : I am perfectly clear on that point. The sale of these shares was a *bo a fide* transfer. The company is thoroughly British, and is bound by the model Clause, which ensures that it shall permanently remain British.

## GRANTS FOR MOTOR OMNIBUSES.

### Further Statements in the House of Commons.

On Monday MR. GILBERT, following questions on the previous Wednesday which were reported in our last issue, asked the Minister of Munitions if any conditions as to cheap fares being charged to workpeople travelling on the various routes were made with the London General Omnibus Company when grants were given by his department for motor omnibuses, and whether the company allowed any passengers to travel on any of the subsidised routes at workmen's fares at the same price as municipal tramway services allowed work-people to travel on their systems.

SIR L. WORTHINGTON EVANS, who replied, said that the answer was in the negative, but cheap return fares had been instituted by the London General Omnibus Company at the request of the Ministry, these cheap return fares being restricted to the employees of the Royal Arsenal. In some cases the fares charged were the same as those charged by competing tramway services. In some cases they were higher than the tramways charged, but in no case were they lower.

In reply to a further question, Sir L. Worthington Evans said that the amount claimed by the London General Omnibus Company for the year 1917-18 would be larger than that paid for the year 1916-17. Negotiations were at present proceeding for a revision of the existing arrangement with the company, including the provision of additional services on existing routes.

### Sunday Omnibuses.

The President of the Board of Trade, in reply to a question by Mr. Gilbert in the House of Commons on Monday, said that four omnibuses had been withdrawn from the Sunday service in the Croydon district, and nine in the Ilford district. The omnibus companies had been requested not to increase their services on tramway routes where, to secure economies in coal, the tramways had reduced their services.

## REPORT OF SELECT COMMITTEE ON FARES.

The recommendations of the Select Commitee of the House of Commons on fares were given in our issue of June 13. A full report of the proceedings of the Committee and minutes of evidence have now been officially published (Stationery Office, price 2d.).

The Committee, was appointed on April 24, and consisted of the following :—Sir William Pearce, chairman, Captain Barnett, Sir James Boyton, Mr. Broughton, Sir Arthur Fell, Mr. Randall, and Mr. Watt. Three meetings were held, and evidence was given by Mr. R. J. Howley, vice-chairman of the Council of the Tramways and Light Railways Association and joint manager of the British Electric Traction Company ; Mr. A. L. Barber, secretary of the Metropolitan Electric Tramways, Ltd., and Mr. C. J. Spencer, honorary secretary of the Municipal Tramways Association of Great Britain and Ireland, and general manager of the Bradford Corporation Tramways.

## REDUCTION IN GLASGOW CAR SERVICES.

At a meeting of the Glasgow Tramways Committee on Wednesday, it was decided that from Sunday, July 21, the last car on each route should leave the centre of the city about an hour earlier than hitherto on week-days. On Sundays the last cars will leave the city for the suburbs about 9.30 p.m. One of the factors contributing to the Committee's decision was the expected calling up shortly of about one hundred motor-men.

## MISCELLANEOUS NEWS AND NOTES.

**Children's Holiday Cars.**—During the summer holidays the Manchester Tramways Committee will provide special cars to convey poor school children to and from Heaton Park.

**Motor Vehicles Wanted.**—Stockton District Council has received sanction for the purchase of a steam wagon. A sub-committee of Chorley Council is considering the purchase of a motor ambulance.

**Whitley Council for the Tramways Industry.**—Some progress has, we understand, been made with the preparation of a draft constitution. Representatives of the men and the tramways have held several conferences.

**Speed Limits.**—A driver in the employ of the Bristol Tramways and Carriage Company was fined 20s., on July 3, for driving a tramway car down Wells Road, on June 17, at a rate exceeding 8 miles an hour. Another driver was fined 20s. for a similar offence on the same day.

**Stopping Places Reduced.**—On the recommendation of the General Manager of Salford Corporation tramways, between two and three hundred stopping places are being dispensed with. At Leeds a considerable number of stops have been discarded on various routes. Not long ago the intervals between the stopping places in the centre of the city were lengthened. Chesterfield Corporation have also reduced the number of stopping places in order to effect economy.

Digitized by Google

**National Service and Car Drivers.**—At the Leicester tribunal a representative of the Tramway Workers' Union said that by arrangement with the Ministry of National Service and his union, tramway car drivers born prior to 1883 were allowed to remain in their present occupation.

**Railway Travelling Restrictions.**—The President of the Board of Trade stated in the House of Commons on Monday that no fresh regulations for restricting railway travelling are at present contemplated, but he could not say what steps it might be necessary to take in the future.

**Sunday Services at Croydon.**—The Sunday morning tramway service was re-started last Sunday, the cars beginning to run at 8 o'clock. There had been much complaint of the absence of the service during the past few weeks, and the management therefore decided to resume the usual service.

**Objection to Women Drivers at Hull.**—Hull tramway men are strongly opposed to the introduction of women drivers, and they are supporting the appeals of all motormen called up for service. The secretary of the Tramwaymen's Union on June 28 supported the application of the grade 2 men for exemption before the local Tribunal. He stated that three hundred men had joined the colours, and desired that the remainder should be retained in order to avoid the necessity of employing women drivers. The application was refused.

**War Time Grading of Tramways.**—A number of the area subcommittees of the Tramways (Board of Trade) Committee have completed the grading of the tramways in their respective areas on the basis of the essential character of their services. The classification has, we believe, been unanimously agreed to, and the decisions have been reported to the principal committee in London. The undertakings have been classified in three grades, those being placed in the first grade the maintenance of whose services is considered to be essential in the national interest.

**Tramway Obstruction.**—In view of the present shortage of men and other difficulties in maintaining tramway services, it is surprising to learn that tramway managers in the Metropolitan area are being given much unnecessary trouble by the exactions of Scotland Yard. Surely in times like these the police officials should do everything possible to assist tramway managements in meeting the convenience of the public. Many of the police requirements in normal times are unnecessary, but to insist upon them in the present critical circumstances constitutes a perfect scandal.

**Abolition of Second Class on the South Western Railway.**—It has been officially announced that from Monday, July 22, the London and South Western Railway Company will abolish its second-class bookings. This step has been dictated by war conditions, although the continuous decrease in second-class long distance travel to about 2 per cent. of the traffic foreshadowed the change now determined upon. One of the results of the change will be a saving in coal which will result from the avoidance of hauling partially filled heavy main line stock. Uniformity of accommodation throughout the line will also be secured, thereby avoiding some confusion on the electrified suburban country branches, where trains have only first and third class accommodation. The second-class stock will be converted to third-class as soon as possible.

**Workmen Refuse to Accept Staggered Hours.**—At a meeting of the Halifax Chamber of Commerce, Mr. E. E. Pollitt submitted a report upon the suggestions made by Mr. J. W. Galloway, engineer of the Halifax Corporation Tramways, for effecting an alteration of the time-tables so as to relieve the congestion at the starting and finishing hours at the mills. Mr. Pollitt said that one firm had already altered their hours for beginning and ending work, and four other large firms had agreed to do likewise. Certain schemes were then drawn up varying the hours slightly, but the majority of the workpeople declined to accept the new time and the employers were consequently unable to proceed further. It was pointed out that the workers would suffer for their non-acceptance of the proposed schedule, because it would be impossible to provide as convenient services for them under the present conditions.

**Metropolitan Managers Visit Reading.**—The Metropolitan Association of Electric Tramway Managers and a few of their friends visited Reading on Wednesday, and inspected the power station of the Corporation, where they were received by the chairman of the Corporation Tramways Committee and the manager, Mr. G. F. Craven. The visitors were much interested in the appointments and equipment of the station, and also in certain special work which is now being carried out there. After leaving the station, the party were taken in special cars over portions of the lines and were also shown the premises which have been fitted up for handling the parcel service which has recently been introduced. The arrangements there are very complete, and provide for the distribution of parcels at very reasonable charges. All parcels handed in at the central office before 6 o'clock are delivered the same evening. The visitors then proceeded to Caversham Bridge Hotel, where they were entertained at luncheon. The Mayor, Mr. F. A. Sarjeant, presided and welcomed the visitors, together with the chairman (Alderman C. G. Field) of the Tramways Committee. Mr. W. C. Ullman, president of the Association, replied, and Mr. W. G. T. Goodman, general manager and engineer of the Adelaide Municipal Tramways, also expressed the thanks of the visitors for the opportunity of going over the fine installation at Reading, and for the hospitality with which they had been received. In the afternoon the party went down the river by steam launch to Henley, returning to London by rail, and dined together at the Municipal and County Club in the evening.

**Council Members as Street Cleaners.**—Owing to a strike of municipal workmen at Cardiff, as a result of a war bonus dispute, the Lord Mayor of Cardiff, Alderman W. Roberts, and a number of members of the city council have been assisting in cleaning the thoroughfares. From midnight on Tuesday until early Wednesday they were engaged on the work.

**Influenza Among Tramway Employees.**—The epidemic of influenza is seriously interfering with the tramway services in various parts of the country. In Manchester, on Monday, the service was reduced by 70 cars, 300 drivers and conductors being away. In Salford 25 fewer cars were run, 100 of the employees being absent. At Belfast last week the general manager reported that ninety-two motormen and conductors were absent from duty, and it was with the greatest difficulty that the services could be kept going. Some of the rush cars had, in fact, to be taken off. The difficulty was partly met by the men in the depot who had been trained to act as motormen in cases of emergency.

**The 12½ Per Cent. Bonus.**—The applications of the National Transport Workers' Federation and other organisations representing the employees, for the granting to tramway employees of a 12½ per cent. bonus, was heard by the Committee of Production on Monday afternoon. The case for the municipal tramways was presented by Mr. J. M. McElroy and Mr. C. J. Spencer, that for the Tramways and Light Railways Association by Mr. R. J. Howley, while Mr. H. E. Blain very cogently set forth the case on behalf of the Metropolitan omnibus companies. The proceedings, which were of considerable interest, occupied the whole of the afternoon, and the Committee reserved its decision. There can be no doubt that if the increase be granted, the condition of many tramway undertakings will become very serious. While in some cases the prospective loss might be recouped by an increased fare, in other cases any further increase in fares may so much reduce the traffic as to secure no substantial gain.

**Edinburgh-Queensferry Tramways.**—The *Scotsman* states that the parliamentary inquiry into the provisional order that is being promoted in connection with this scheme will take place in Edinburgh probably in the second fortnight in July. The Tramways Committee expect by that time they will have succeeded in coming to an arrangement with some at least of those who have lodged petitions against the proposal. The local trades council and the local branch of the Labour party are taking active steps to support the scheme. In a circular letter, the unions state that they consider it would be fatal to allow private enterprise to enter the field for the provision of travelling facilities in the vicinity of the city. A well-conceived scheme of tramway extensions in public hands will assist the solution of the housing problem, not to speak of the advantage in providing for the workers and their families ready access to the coast districts in the vicinity. A series of public open-air meetings is being held.

**The Channel Tunnel.**—Sir Arthur Fell, Chairman of the House of Commons Channel Tunnel Committee, in speaking at the Inter-Allied Parliamentary Commercial Conference, on Thursday, said that the effect of the proposed tunnel would be tremendous. The effect of a sea voyage on the goods traffic between Great Britain and the Continent generally was even more serious than the effect on passenger travel. Goods had to be packed substantially the same as for a voyage to New York or Australia, while the freight charges were often less to New York than across the Channel. Many products could not stand the sea voyage from France and other consignments were unable to bear the expense and delay of two transshipments. To accommodate European express trains the diameter of the tunnel would be 18 feet, and the cover above the tunnel would be 100 feet, thus protecting it against mines, while provision would be made in case of emergency to flood it with water for a length of a mile. Expresses would run direct from London to Paris in less than six hours.

## PERSONAL.

**Lieut.-Col. W. A. Vignoles,** borough electrical engineer of Grimsby Corporation, has recently been awarded a bar to his D.S.O.

**Mr. William Perren Maycock,** whose death occurred on June 29, at West Norwood, was the author of many useful electrical text books.

**Mr. K. P. K. Thom,** son of Mr. W. Thom, general manager of the Potteries Electric Traction Company, has won an entrance scholarship at Radley College, of the value of £50 per annum, tenable for four years.

**Mr. J. W. Hame,** city electrical engineer and tramways manager of York, has been appointed district engineer to assist the technical local representative of the Controller of Coal Mines in securing coal economy in local engineering and other works.

**Mr. R. G. Elliott,** station superintendent of Hull City Tramways, has been appointed honorary district engineer and representative of the technical adviser to the Controller of Coal Mines, Board of Trade (Coal Mines Department).

**Mr. W. T. Robson.**—The Southampton Tramways Committee have adopted the following resolution:—"The Committee, having heard with extreme regret that the general manager and engineer, Mr. W. T. Robson, has not apparently benefitted in health by his recent vacation, desire to place on record their high appreciation of Mr. Robson's devotion to duty while he has been in the service of the Corporation. Further, the Committee recommend Mr. Robson to take an extended holiday, with the sincere hope that he may soon return fully restored to his usual health and able to resume his duties.'

Digitized by Google

**Mr. A. W. Clegg,** electrical engineer and tramway manager of Lincoln Corporation, has been granted an increase in salary from £40c to £500 a year as from April 1 last.

**Mr. Ernest Hatton,** general manager and engineer of Newcastle Corporation tramways, has been awarded an increase in salary from £1,000 to £1,500 per annum, the increase to be made at the rate of £100 a year during the next five years. At the Council meeting on Wednesday, Mr. R. Mayne, chairman of the Tramways Committee, in moving the acceptance of the Tramways Committees recommendation, spoke in high praise of Mr. Hatton's work and gave statistics showing how greatly the traffic and receipts of the undertaking have increased under his management. Mr. Hatton had proved his worth in a practical way. Not only was he their general manager and engineer, but he had brought out and patented several inventions of which they had the advantage. The recommendation was seconded by Mr. A. M. Sutherland, vice-chairman of the Committee. Mr. Sheriff S. Easten, advocating the adoption of the report, stated that he thought the manager and his staff deserved to be congratulated on the service that was maintained. The *Newcastle Chronicle,* in commenting on the matter, remarked that it had to be admitted that the Newcastle tramway system was in the hands of a very capable manager. War time conditions had made his task an exceedingly difficult one but through it all he had been able to maintain a good service of cars.

The death is announced of **Mr. W. H. Pickles,** chairman of the Morecambe Tramways Company and several other local undertakings.

## FINANCIAL REPORTS AND MEETINGS.

**Brighton Corporation Tramways.**—The annual report of the engineer and manager of the Brighton Corporation tramways, Mr. William Marsh, for the year ended March 31 last, has been issued. The financial results are very satisfactory. All previous records have been broken, and the number of passengers carried was nearly half as many again as was the case three years ago. The remarkable growth of the undertaking is shown in the following summary :—

| Year ended March 31 | 1918 | 1917 | 1916 | 1915 |
|---|---|---|---|---|
| Traffic revenue | £77,916 | £62,527 | £55,871 | £54,413 |
| Miscellaneous revenue | 2,306 | 2,292 | 2,065 | 2,113 |
| Total revenue | £80,222 | £64,819 | £57,936 | £56,526 |
| Working expenses | 48,398 | 41,498 | 41,001 | 42,985 |
| Surplus on working | £31,824 | £23,321 | £16,935 | £13,541 |
| Bank interest | 391 | 134 | 38 | 55 |
| Total gross profit | £32,215 | £23,455 | £16,973 | £13,596 |
| Interest on capital | £7,301 | £7,345 | £7,348 | £7,661 |
| Sinking fund | 6,195 | 6,432 | 6,429 | 5,917 |
| Income tax | 2,041 | 1,644 | 965 | *491 |
| Revenue contribution to capital outlay | 1,250 | 513 | — | — |
| Net balance | 15,428 | 7,521 | 2,231 | 18 |
| | £32,215 | £23,455 | £16,973 | £13,596 |
| Car miles run | 1,152,006 | 1,131,201 | 1,053,285 | 1,108,352 |
| Passengers carried | 16,942,512 | 13,678,251 | 12,295 198 | 11,837,828 |
| Number of units used | 1,907,537 | 1,837,629 | 1,678,627 | 1,676,770 |
| Units per car mile | 1·65 | 1·62 | 1·59 | 1·51 |
| Average traffic revenue per car mile | 16·23d. | 13·26d. | 12·73d. | 11·78d. |
| Average traffic revenue per mile of single track | £4,532 | £3,637 | £3,191 | £3,165 |
| Average total revenue per car mile | 16·71d. | 13·75d. | 13·202d. | 12·24d. |
| Percentage of working expenses to receipts | 57·25 | 58·56 | 64·14 | 72·79 |
| Average working expenses per car mile (excluding power) | 7·17d. | 5·78d. | 6·35d. | 7·10d. |
| Average working expenses per car mile (including power) | 9·56d | 8·05d. | 8·47d. | 8·91d. |
| Average car miles per day per car | 83·92 | 88·56 | 77·76 | 76·08 |
| Average journeys per head of population per annum | 126·5 | 102·13 | 91·8 | 88·38 |

* Included in working expenses

The capital charges on the loan for the Act of 1912 have now been met, but the saving in this respect is far more than counterbalanced by the increase in income tax. The total revenue shows an increase on the year of 23·76 per cent., while the working expenses, including war dependants' separation allowances, have increased by 16·63 per cent. The passengers carried amounted to nearly seventeen millions, an increase of nearly 3,600,000. Mr. Marsh remarks that although the undertaking may be apparently prospering, the conditions are abnormal, and in view of the future fares should certainly be increased, and other steps taken permanently to increase the revenue. Repairs and renewals have been reduced as much as practicable, and the postponement of track renewals is mounting up steadily. Just previous to the war, thorough reconstruction of the track had taken place, and the benefit of the good workmanship then put in is now being felt. In concluding his report, Mr. Marsh says that one outstanding point is the greatly increased expenditure which is bound to come as an aftermath of the war, and no time should be lost in taking the necessary steps to provide for it. Another item of importance is the steadily accumulating arrears of renewals, while insufficient provision is being made to pay for them. Allowing for an increase of 50 per cent. in the cost of track renewals, the undertaking cannot be said to be making sufficient allowance until at least £12,500 per annum is being set aside, with arrears to date.

**Edgar Allen and Company, Ltd.,** after paying the preference dividend and allocating £20,000 to general reserve, pay 10 per cent. and a bonus of 1s. 6d. per share, making a total of 17½ per cent. on the ordinary shares, free of tax, and carry forward £35,340.

**General Electric Co.**—The Treasury has refused for the present to sanction the division of the ordinary £10 shares of this company into £1 shares. This does not, however, make any alteration in the plans of the directors, but the ordinary shares will remain £10 shares.

**Lancaster Corporation Tramways.**—For the year ended March 31 last, there was a profit of £29. This is the first time in the history of the undertaking that all the charges have been met out of revenue. During the year the tramway debt has been reduced by £1,250. The profit on the omnibuses after paying all charges was £572.

**Colombo Electric Tramways and Lighting Co.**—After providing for debenture interest and including the amount brought forward, the available balance is £35,239, a decrease of £1,650. A dividend of 10 per cent., free of tax, has been declared, and £18,500 has been carried to the general reserve and renewal fund, leaving £8,655 to be carried forward.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended July 3, amounted to £65,323, an increase of £8,618 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to July 3 (thirteen and a half weeks), the total receipts were £830,374, an increase of £93,166 on the corresponding period of 1917.

**Rangoon Electric Tramways and Supply Co.**—Presiding at the meeting on June 28, Sir F. W. R. Fryer said that after providing for debenture interest, dividend on preference capital and several allocations mentioned in the report, there was a balance of £9,568. The directors recommended the payment of a dividend on the ordinary shares of 3 per cent., free of income tax, carrying forward £4,258, an increase of nearly £1,300 as compared with last year. Power house expenses amounted to £61,543, as compared with £35,030, due largely to the higher price of coal. The receipts showed an improvement of £4,500, the passengers being nearly 50 per cent. more. The introduction of lower fares had made tramway travelling much more popular. The motor omnibus service, owing to temporary difficulties, had been suspended and the vehicles had been converted to other use.

## CONTRACTS AND ORDERS.

**Hadfields, Ltd.,** of Sheffield, are supplying steel points and crossings to Salford Tramways Committee.

**The Stirling Boiler Company, Ltd.,** are supplying a boiler and superheater to Hammersmith Electricity Committee at £4,660, plus £500 for fittings.

**Ilford Tramways Committee** have authorised the tramways manager, Mr. L. E. Harvey, to use the Sandberg process for hardening rails at fifty joints, at £2 per joint.

**Salford Electricity Committee** have accepted the following tenders : —British Westinghouse Company, Ltd., e.h.t. switchgear ; E. Green and Son, Ltd., fuel economisers ; Callender's Cable and Construction Co., Ltd. e.h.t. cable and telephone cable.

**Glasgow Tramways Committee** have accepted tenders for armature coils from the British Westinghouse Co., Ltd. ; for trolley wire from F. Smith and Co. ; for 500 tons of rails from Bolckow, Vaughan and Co., and for 200 tons of rails from Walter Scott, Ltd.

**DICK, KERR & Co.,**
**Limited,**
**ABCHURCH YARD, CANNON STREET,**
**LONDON, E.C.,**
**ENGINEERS & CONTRACTORS.**
**Complete Equipment**
**TRAMWAYS & LIGHT RAILWAYS**
**at home and abroad**

# TRAMWAY TRACK CONSTRUCTION AND MAINTENANCE.

By R. BICKERSTAFFE HOLT,
Highways and Permanent Way Engineer, City of Leeds

CONTENTS:

FOREWORD.
What's wrong with the Track?"

CHAPTER I.—CONCRETE FOUNDATIONS.
Defects—Causes of fracture—Method of laying concrete.

CHAPTER II.—CONCRETE MATERIALS.
Road metal—Water-gravel—Sand—Clinker-sand—Trass.

CHAPTER III.—REPAIRS TO CONCRETE FOUNDATIONS.
Patching—Partial repairs—Complete renewal.

CHAPTER IV.—TRACK DESIGN.
"Follow my leader" policy—Importance of local conditions—Effect on sub-soil—Standard methods—Transverse sleeper tracks—Effect of vehicular traffic and tramway car traffic.

CHAPTER V.—RAIL PACKING.
Pitch and tar packing—Materials—Testing and preparation of materials—Prepared tar—Pitch mixtures—Movement of rails—Packing and floating.

CHAPTER VI.—RAIL LAYING.
Bad rail packing—Rails canted or twisted—Anchoring and Padding—Rail expansion and contraction—Curving of rails—Springing of rails—Anchoring tracks.

CHAPTER VII.—JOINTS, FISH PLATES, BOLTS AND NUTS
Why joints fail—Dished or hammered joints—Movement at joints.

CHAPTER VIII.—JOINT WELDING.
Methods of welding—Thermit welding—Electric arc welding process—Expansion and contraction—Oxy-acetylene process.

CHAPTER IX.—RAIL WEAR.
At joints—On new tracks—On steep gradients—On wheel tires—Contact of wheel and tire—Leeds special rail section—Railway rails—Depression of check.

CHAPTER X.—COMPOSITION AND MANUFACTURE OF TRAMWAY RAILS AND RAIL WEAR.
Defective rails—Composition of rails—Standard specification—Basic and acid Bessemer process—Sandberg process—Analysis of rails and rail tests—Drop test unnecessary.

CHAPTER XI.—CORROSION OF TRAMWAY RAILS.
Causes of rail corrosion—Exposure to sea water—Effect of corrosive liquid.

CHAPTER XII.—TRACK PAVING.
Effect of vehicular traffic—Cause of loose rails—Importance of quality in setts—Square-dressed setts—Nidged granite setts—Bonawe granite setts—Wood paving—Bedding of setts—Laying and ramming.

CHAPTER XIII.—RECONSTRUCTION.
Removal of tracks—Temporary tracks.

CHAPTER XIV.—SURFACE DRAINAGE AND RAIL MAINTENANCE.
Rail cleaning—Rail grinding—Rail planing.

CHAPTER XV.—SPECIAL TRACK WORK.
Design and standardisation of points—Unbroken main line crossings—Renewable plates—Switches—Mechanism for movable points—Heel pins—Tongue heel adjusters—Guard rails—Spiral tables for curves and junctions—Special track problems.

## THE AUTOBUS IN THE TRAMWAY WORLD.

**Motor Traffic Section.**

When "The Tramway and Railway World" was founded in 1892, motor traction was, of course, scarcely dreamt of, but the avowed object of the paper was to encourage all new methods that gave promise of usefulness.

In pursuance of that policy the progress of motor traction received early attention. Commenting on the historic motor parade to Brighton in 1896, "The Tramway and Railway World" predicted that

"It would give a prodigious impulse to transport both by road and rail."

Within a decade this prophecy was abundantly fulfilled and so much space had been devoted to the new industry that in 1906 a special

MOTOR TRAFFIC SECTION

was added. Every illustrated issue thus contains a section devoted especially to motor cars for Public Service, and includes articles on current topics, illustrated descriptions of new types of vehicles and accessories, and the latest news.

**Public Service Motor Cars.**

The importance of this section will be gathered from the fact that an increasing number of the leading municipal authorities, railway and transport companies now own and operate large fleets of motor vehicles, including omnibuses, chars-a-bancs, motor lorries, for the transport of goods, parcel delivery vans, tower wagons, motor street sweepers, and a variety of other types.

# Electric AND OTHER Traction.

LARGEST MAKERS OF COAL AND ASH HANDLING PLANT IN THE KINGDOM

WITH a "Bennis" equipment the coal can be carried direct to the hoppers of the Mechanical Stokers, eliminating costly labour, saving time and waste in handling, while "Bennis" Mechanical Stokers will give an increased steam output with low price coal.

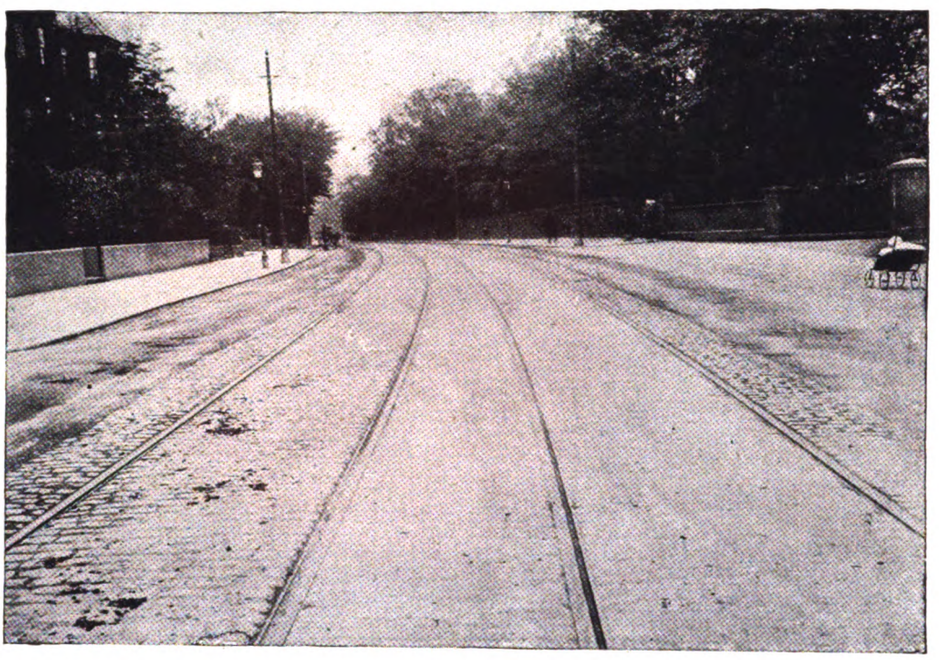
# TRAMWAY FOUNDATIONS



Belfast Corporation Tramways. Borough Engineer: H. A. Cutler, Esq., M.I.C.E.
Trouble due to settlement on bad ground has been eliminated by use of B.R.C. Foundation.

WHEN the concrete foundation is reinforced with B.R.C. Fabric the surface is maintained level, which gives a smooth running line, even on poor ground.

# THE PARAGON EARTH CONE

is the safest, surest and most reliable. Careful tests have proved that its geometrical form provides a good contact. Will carry heavy currents for short periods without overheating. THE PARAGON EARTH CONE is made of pure copper—perforated—and filled with charcoal. This attracts the moisture and ensures a certain contact. Suitable for Electric Railways, Tramways, Telegraph, Telephone, Electric Light, Power, Lightning Conductors, etc.

# RAIL WELDING COMPANY

119 Victoria Street, Westminster, LONDON S.W.1

## ELECTRIC RAIL WELDING FOR NEW AND EXISTING RAILS

The only process by which the premature renewal of rails owing to defective joints can be avoided, the life of the rails prolonged for several years, and silent running ensured.

(Until recently carried out by The Rail Welding Dept. of the Tudor Accumulator Co. Ltd.)

*THIS PROCESS HAS BEEN CARRIED OUT ON THE FOLLOWING UNDERTAKINGS*

| | | | |
|---|---|---|---|
| ABERDEEN | LEITH | NEWPORT | SALFORD |
| BRADFORD | LIVERPOOL | OLDHAM | SHEFFIELD |

## The Fallacy of "Cheap" Cars.

So-called "cheap" motor vans are traps for the unwary. Like the jerry-built house, they are a constant source of expense.

Secure an Albion—the car that is built to last. It may cost rather more in the first place, but owing to its splendid reliability, freedom from break-down, and exceedingly long life, it is the cheapest in the long run.

The Albion is the perfected result of over 18 years' experience in the specialised manufacture of Commercial Vehicles.

*Fully illustrated Handbook published for each Albion Model. Price 2/6 per copy.*

# SAFETY FIRST

Secondly, see that each car is equipped with a Barrett EMERGENCY Jack.

It must be a BARRETT, which means quick lifting.

The Barrett EMERGENCY Jack illustrated lifts 15 tons (guaranteed) in any position.

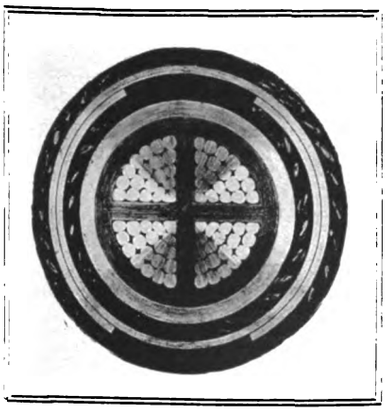
# Westinghouse Tramway Controllers

Strong and simple mechanism.
Liberal rating of current carrying parts.
Low maintenance.
All parts made to guage and strictly interchangeable, therefore all wearing parts are quickly and cheaply renewable.
Maximum accessibility for inspection and repairs.
Constant finger tension irrespective of wear and finger springs specially designed to prevent stubbing.
Simple method of cutting out either motor when required.
Powerful magnetic controller blow-out.
Ample space for incoming cables.

Westinghouse
Manchester

The British Westinghouse Electric & Mfg. Co., Ltd.,
Trafford Park, Manchester.



*·075 sq. in. Cable, Class 202, Paper Insulated, Lead Covered, Served, Steel Tape Armoured and Served.*

# HENLEY CABLES

EVERY year we manufacture tens of thousands of miles of small electric wire insulated with Vulcanised India Rubber, in addition to Paper insulated Mains.

WE have separate factories (at North Woolwich and Gravesend, England), each devoting its energies to one type.

YOU should ask us to quote for your requirements in *any* size or type of Electric Cables for use under any working condition.

# Upkeep Costs

**DURABILITY** is the deciding factor when purchasing Electric Traction Material. A slight difference in first cost can be quickly absorbed in subsequent maintenance charges.

It must be borne in mind that even maintenance charges do not unfold the whole story. Defective overhead equipment produces delays and consequent loss of traffic revenues.

It pays to purchase BIRKBY'S Equipment because it has an old-established reputation for workmanship and durability.

Our fully illustrated catalogue will be sent post free on request.

We specialise in the manufacture of all kinds of Electrical Insulation Material, viz. :—Mica, Leatheroid, Press-spahn, Fibre, Yellow and Black Insulating Cloth, Tapes, Silk and Moulded Insulating Material.

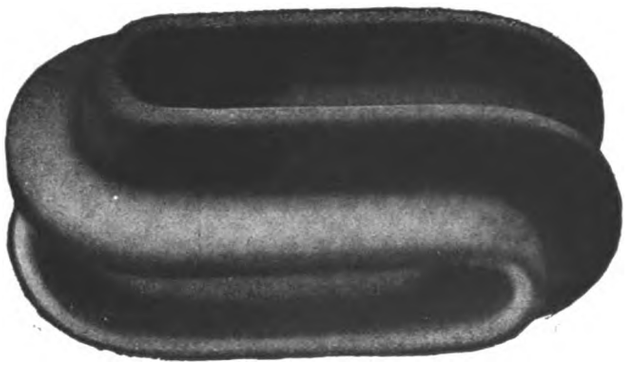
# PRESCOT INSULATORS



Regd. No. 639667/14.

These Insulators are insulators all through and do not depend on the attractive green glaze for their insulating qualities.

They are designed to maintain their alignment when erected, and their mechanical and electrical factors of safety are high.

**The following are particulars of the sizes stocked:**

| | D 4411 | D 4412 |
|---|---|---|
| Working Load ... ... ... | 500 lbs. | 2,500 lbs. |
| Breaking Load ... ... ... | 2,000 lbs. | 10,000 lbs. |
| Flash over Voltage (dry) ... ... | 20,000 A.C. | 30,000 A.C. |
| Flash over Voltage (wet) ... ... | 2,000 A.C. | 10,000 A.C. |

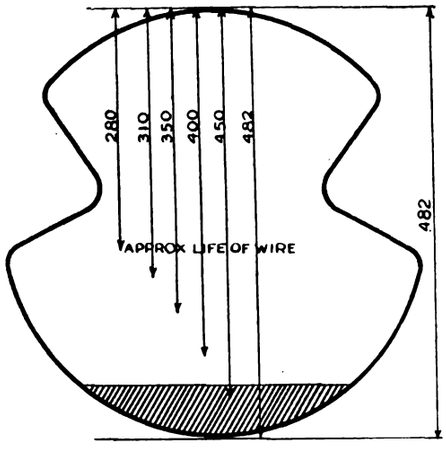
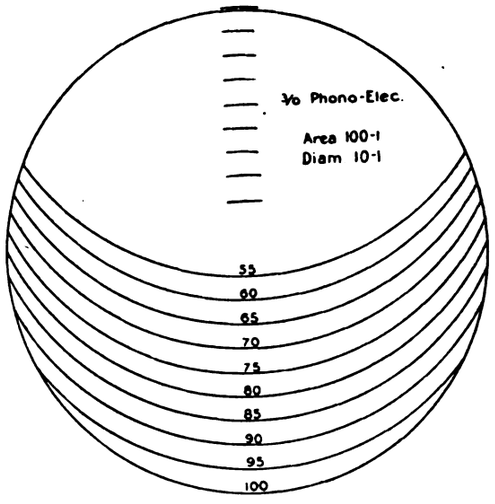
# THE SECRET

## OF THE LONG LIFE IN

# PHONO-ELECTRIC TROLLEY WIRE





The above diagrams show the permissible wear upon a No. 0000 Phono ELECTRIC trolley wire and are taken from the actual results of gauging by a large user.

They show that the section of the wire can be worn down to practically 65 per cent. of its original thickness before it need be discarded.

This is because it has such a high tensile strength that the small section left is quite sufficient to withstand the strain of traffic. Ordinary hard drawn copper wire would have to be renewed long before an equal reduction has been made and would have worn out much quicker.

## HOW IS THIS FOR ECONOMY?

PHONO-ELECTRIC Trolley Wire is homogeneous throughout and not hard on the surface only, like hard drawn copper wire. Therefore the wear is even throughout.

**Try a short length on a busy section. We ask this to prove what we say is correct**

# Improved Braking for Pony Wheels

A brake beam has always been used for the driving-wheel brake shoes on maximum-traction trucks, but has only recently been adopted for the pony-wheel shoes. The Brill 39-E Truck now incorporates a pony-wheel brake beam, which beam is in a direct line with the force. A differential lever system for exerting a proportionate pressure on each pair of wheels according to the load which each carries has now been worked out in a very simple and effectual manner. This design of pony-wheel brake beam prevents any possible springing of the beam due to the force of the pull rod. The connection between the driving and pony-wheel brake beams—including the adjusting feature—is the same as on other Brill Bogie Trucks; furthermore, the centre-pull lever is the same as formerly. The Brill 39-E Truck now has a brake system which under practically any conditions keeps all four brake shoes in perfect alignment. This improvement is covered by patents.

## SPECIFY "AETNA" INSULATION

Large Stock of Line Material, Porcelain Insulators, "Shaw" Lightning Arrestors, Fuses, Tools, and Accessories for Traction and Transmission Lines

## BLOT OUT REPAIR BILLS

If the insulation of the armatures and windings of your electrical plant is not given proper attention you are certainly laying up trouble for yourself. Breakdowns caused by the entrance of moisture, acid, oils, dirt, etc., will result, and repair bills will be the outcome. On the other hand, a periodical coating with Standard Insulating Varnishes and Compounds will prevent the possibility of this occurring and will enable the entire plant to run with the greatest economy.

Standard insulating specialties are regularly used by the leading electrical manufacturing firms, lighting and power stations, railways, tramways, etc., which constitutes definite proof of their practical utility.

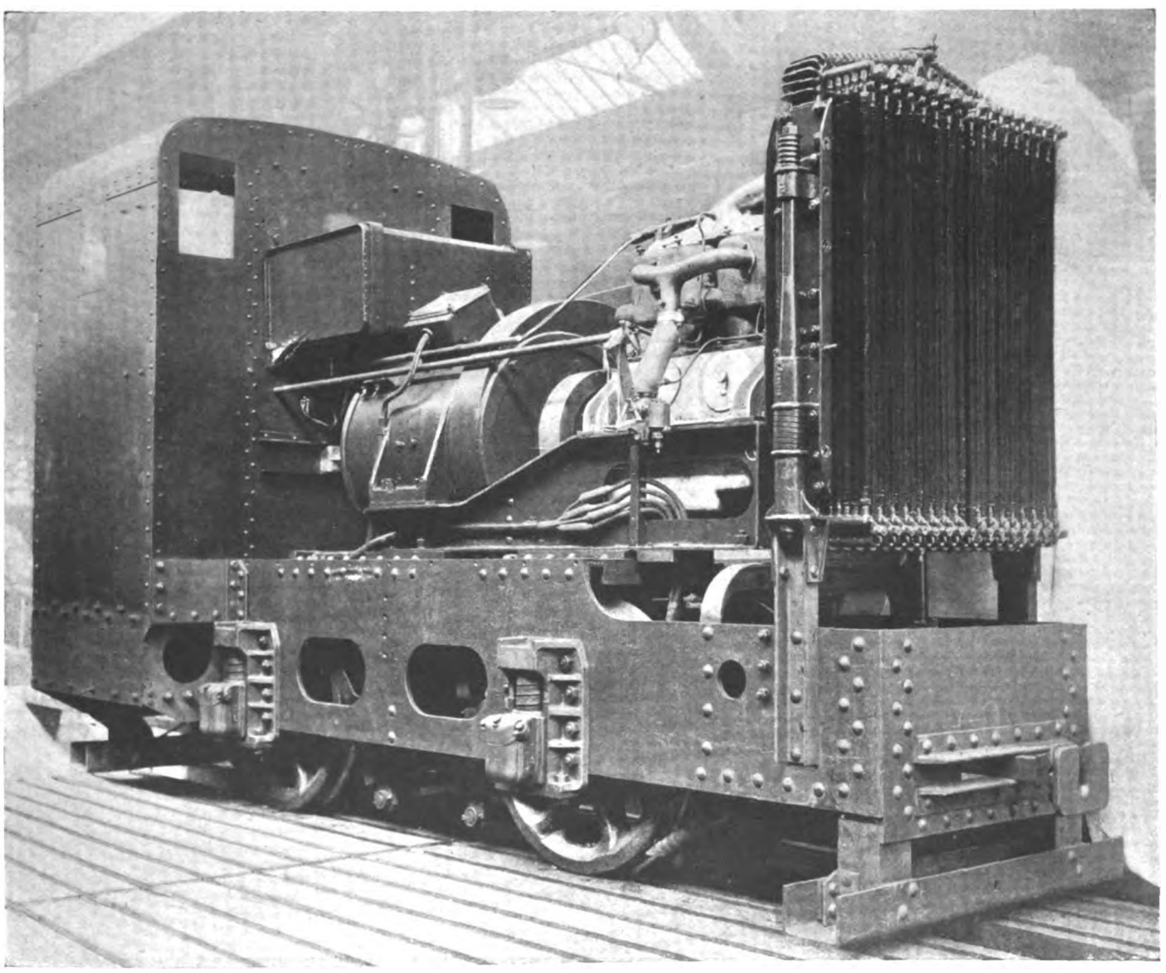
# SOME NOVEL DICK-KERR LOCOMOTIVES.

PETROL ELECTRIC MOTORS FOR SIXTY CENTIMETRE RAILWAYS.

Within the last few years Messrs. Dick, Kerr and Company have constructed for service abroad over one hundred petrol electric locomotives, which have given excellent results. These interesting and novel machines, which are illustrated in the accompanying series of photographs, are designed to haul 100 tons on the level, and are built to run on a 60-centimetre gauge railway. They have an over-all length of 15 ft. 1 in., and an extreme width over the cab of 5 ft. 6 in., with a height of about 8 ft. 6 in. The weight is 7 tons each. The superstructure, including the driver's cab, housing for the generating plant, petrol tank, radiator, etc., is carried on a rivetted frame built up of ½-in. boiler plate. At each end there is a re-railing bar, which is placed across the truck and suspended just above the rails. These bars, in case of derailment, hold the locomotive in position, and facilitate its replacement by means of re-railing levers and lifting jacks provided for the purpose. Combined buffers and couplings are provided at each end of the truck, and there is sanding gear to each wheel. The brake gear is of the equalised type. A special tackle with eyes for crane hooks is provided over the housing, so that the locomotive may be conveniently handled for shipment.



Petrol Electric Locomotive with Housing Removed, Showing Radiator, Petrol Engine, and Generator.

Each locomotive is provided with a 45-H.P. four-cylinder petrol engine, which drives through a flexible

Digitized by Google

coupling a 30-KW. ventilated type direct-current generator. This generating set runs at 1,000 revolutions per minute, and supplies current at 500 volts pressure to two D-K 21 mining type traction motors, each driving through single reduction gearing of 6·68 to 1 ratio on to an axle with 32-in. wheels. The motors each have a continuous rating of 12 H.P., and an hourly rating of 25 H.P., and allow of a locomotive speed of 5·2 miles per hour on the one hour rating.

The two motors are run in parallel, speed control being obtained by varying the generator voltage, a special type of controller being employed in which provision is made for cutting out either motor in case of a breakdown, and in which special notches are provided for starting the engine by means of electric current supplied from another locomotive. The controller is mounted in the cab close to the control levers for the ignition and throttle. The cab also contains a starting handle, the hand wheel pillar for the brakes, circuit breakers and instruments, including a revolution counter. The petrol tank is carried under the housing immediately in front of the cab, and means are provided for filling it from inside the latter.

## THE CHANNEL TUNNEL.

Sir Arthur Fell, chairman of the House of Commons Channel Tunnel Committee, in speaking at the Inter-Allied Parliamentary Commercial Conference on July 4, said that the effect of the proposed tunnel would be tremendous. The effect of a sea voyage on the goods traffic between Great Britain and the Continent generally was even more serious than the effect on passenger travel. Goods had to be packed substantially the same as for a voyage to New York or Australia, while the freight charges were often less to New York than across the Channel. Many products could not stand the sea voyage from France, and other consignments were unable to bear the expense and delay of two transhipments. To accommodate European express trains the diameter of the tunnel would be 18 feet, and the cover above the tunnel would be 100 feet, thus protecting it against mines, while provision would be made in case of emergency to flood it with water for a length of a mile. Electric expresses would run direct from London to Paris in less than six hours.

## NEW TURBINE PLANT AT HULL.

A 5,000-KW. STANDARD DICK-KERR IMPULSE MACHINE.

In view of the growing demand for electrical power for local industries the Hull Corporation, on the advice of its engineer, in 1911 embarked on a comprehensive scheme for three-phase supply to augment the existing high tension and low tension direct current system. This scheme included the installation of three-phase turbo-generating plant, serving several sub-stations through a system of ring mains, and the initial stages were completed at the latter end of 1913.

To contain the new plant, reinforced concrete turbine and boiler houses were constructed, adjoining the older station; the former was designed to accommodate four 2,000-KW. sets and can be considerably extended when required. The first installation of generating plant comprised two Dick-Kerr turbo-alternators with an output of 2,000 KW. at ·8 power factor, when running at 1,500 revolutions per minute, to supply three-phase current at 6,600 volts and 50 cycles.

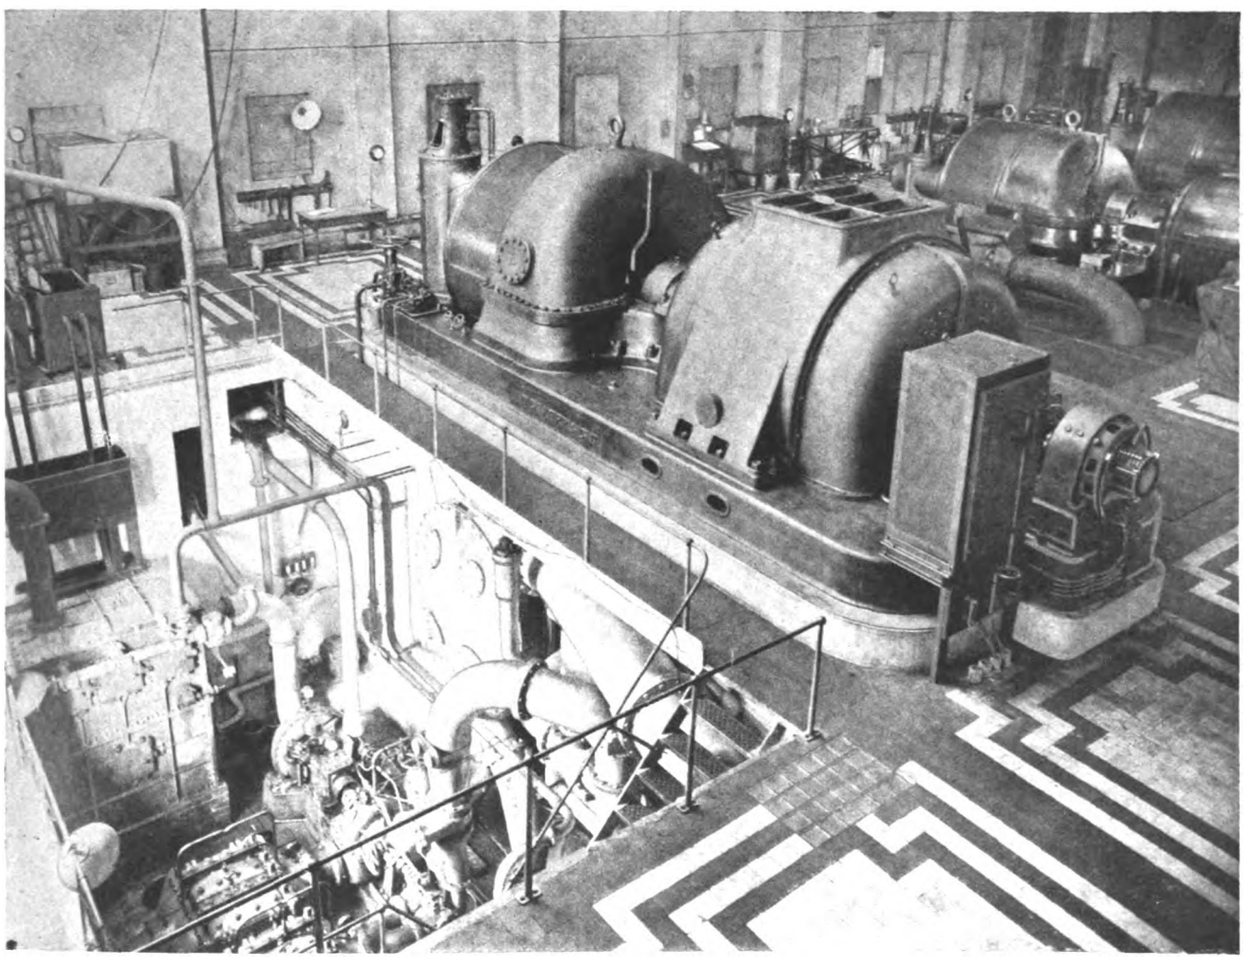
Steam at 180-lbs. pressure with 170 deg. of superheat is applied to these turbines, and they were fitted with ejector condensers in uniformity with the older plant. The initial boiler installation consisted of two Woodeson water-tube boilers, each having a heating surface of 6,100 sq. ft.

Early in 1915 the city authorities adopted a recommendation by the acting city electrical engineer, Mr. J. F. Magoris, for the installation of further plant, and it was decided in the interests of efficiency and general economy to instal a larger unit than previously and to adopt surface condensing, the contract for a 5,000-KW. turbo-alternator set being placed with Messrs. Dick, Kerr and Company, who had supplied the earlier turbine sets. The new extension also includes a further Woodeson water-tube boiler of the same capacity as the previous two boilers, and a Stirling boiler having a heating surface of 8,200 sq. ft. Both these latter two boilers are fitted with Erith-Riley underfeed stokers.

It was necessary to restrict the depth of excavation below the turbine set, in order not to interfere with the piling under the foundations, and with a view to obtaining the necessary head room for the condensing plant, the turbine bedplate was raised some 12 in. above the normal floor level.

The turbine set is a compact machine, measuring roughly 30 ft. in length over the bedplate which is longitudinally split. It is designed for an output of 5,000 KW. at ·8 power factor at full load when running at a speed of 1,500 revolutions per minute, and will carry 50 per cent. overload. The steam conditions are similar to those of the earlier turbines and the condensing plant is designed to give a vacuum of 28½ in. with 30 in. barometric pressure.

The turbine is a standard Dick-Kerr impulse machine, with 11 stages, the first being a velocity compounded stage. The ordinary stages are fitted with special bronze blading, while the velocity stage has alloy steel blades. The turbine body is of cast iron, split horizontally. The first half dozen diaphragms are of cast steel, and the remainder of cast iron, and the body is supported at the exhaust end in such a way as to allow



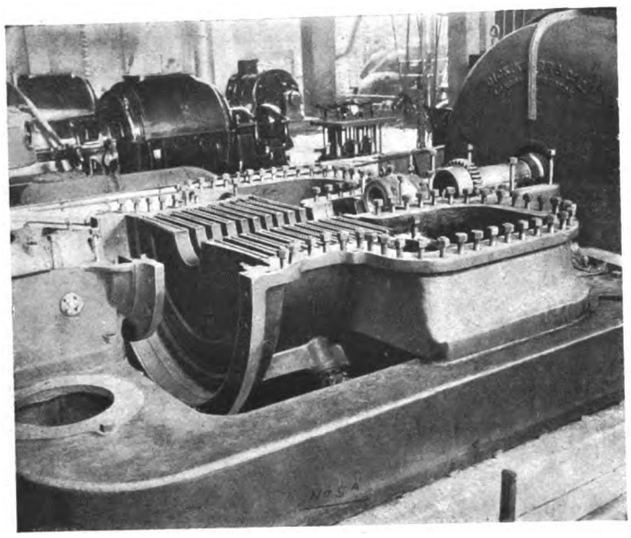
**5,000-K.W. Dick-Kerr Turbo Generator with Willans Condensing Plant—Hull Corporation's Power Station.**

Digitized by Google

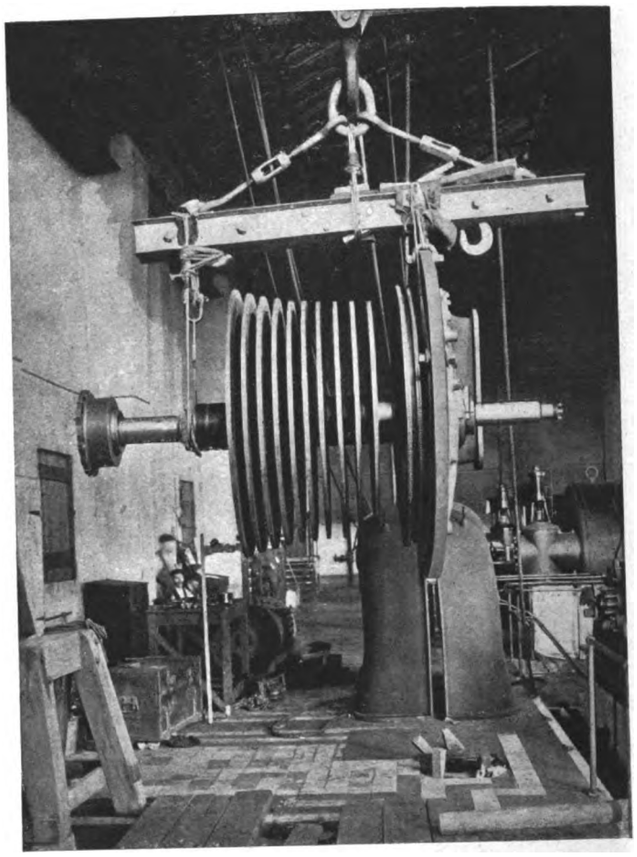
of freedom for expansion. The steam admission end is closed by a cast-iron cover, with high-pressure steam-carrying parts of cast steel; the disc wheels forming the rotor are of special quality steel, and were accurately balanced and carefully tested when complete with their blading. All the turbine glands are of the labyrinth type and the end glands are steam-sealed, any excess steam from the high-pressure glands being taken to an intermediate stage of the turbine.

The turbine governor is of the centrifugal type, worm-driven from the main shaft, and by means of an oil relay this actuates a double-beat throttle valve with individual nozzle regulating valves arranged in series, which automatically control the admission of steam to the turbine under all load conditions. The actual movement of these valves is effected by pressure oil, the sequence of operations being the opening of the double-beat throttle valve, controlling the admission of steam to the nozzle-regulating valve chamber and the first group of nozzles, followed successively by the opening of the individual nozzle regulating valves, four in number, which control the admission of steam from the valve chamber to the remaining groups of nozzles. In addition to the ordinary governor, the usual safety governor is fitted in the turbine shaft and is arranged to come into operation when the turbine attains a speed of 15 per cent. in excess of the normal.

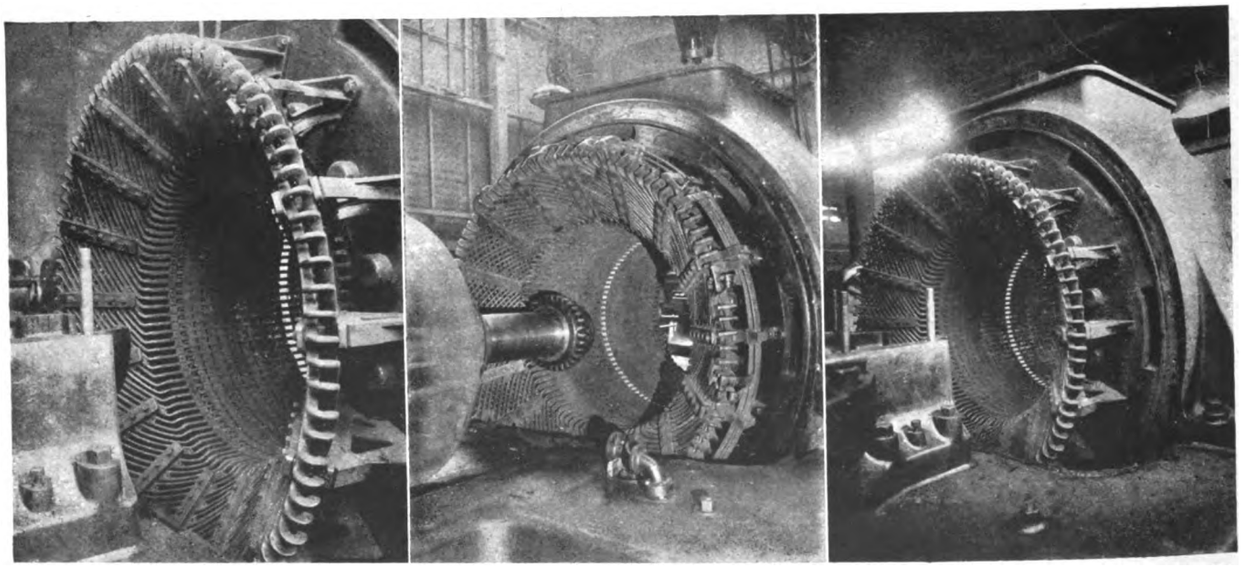
A complete oil circulating system is provided to the bearings and for supply to the governor relay, pressure gauges being fitted to indicate oil pressure at the thrust block and relay cylinder. The oil after use is filtered and cooled in a condenser-type oil cooler, having 200 sq. ft. of cooling surface. For starting-up purposes, before the main oil pump comes into operation, a duplex steam-driven oil pump is fitted. The turbine



Lower Half Case of Turbine Casing.



Turbine Rotor and End Cover.



Views Showing Basket Winding on Alternator.

Digitized by Google

is coupled to the alternator by a claw-type flexible coupling, lubricated by pressure oil.

The alternator frame and laminated core are built up in one piece, the laminations being securely held in dovetail slots machined in the frame. An interesting feature of the machine is the stator winding, which is of the barrel or basket type. The coils are former wound and mica insulated, and are laid in open slots; the projecting end-turns are given a conical formation, being inclined at about 45 deg. to the axis of the machine and supported in position by massive bronze clamps. This arrangement gives an extremely rigid and at the same time well-ventilated construction.

The rotor, which is of the cylindrical type, and shaft are machined from one solid forging, ventilating channels being cut below each coil and radial ventilating slots near the centre of the rotor. The winding consists of copper straps laid flat in the slots and bent on edge, with mica insulation between turns and to ground. The overhanging ends are retained in position by means of massive bronze end caps.

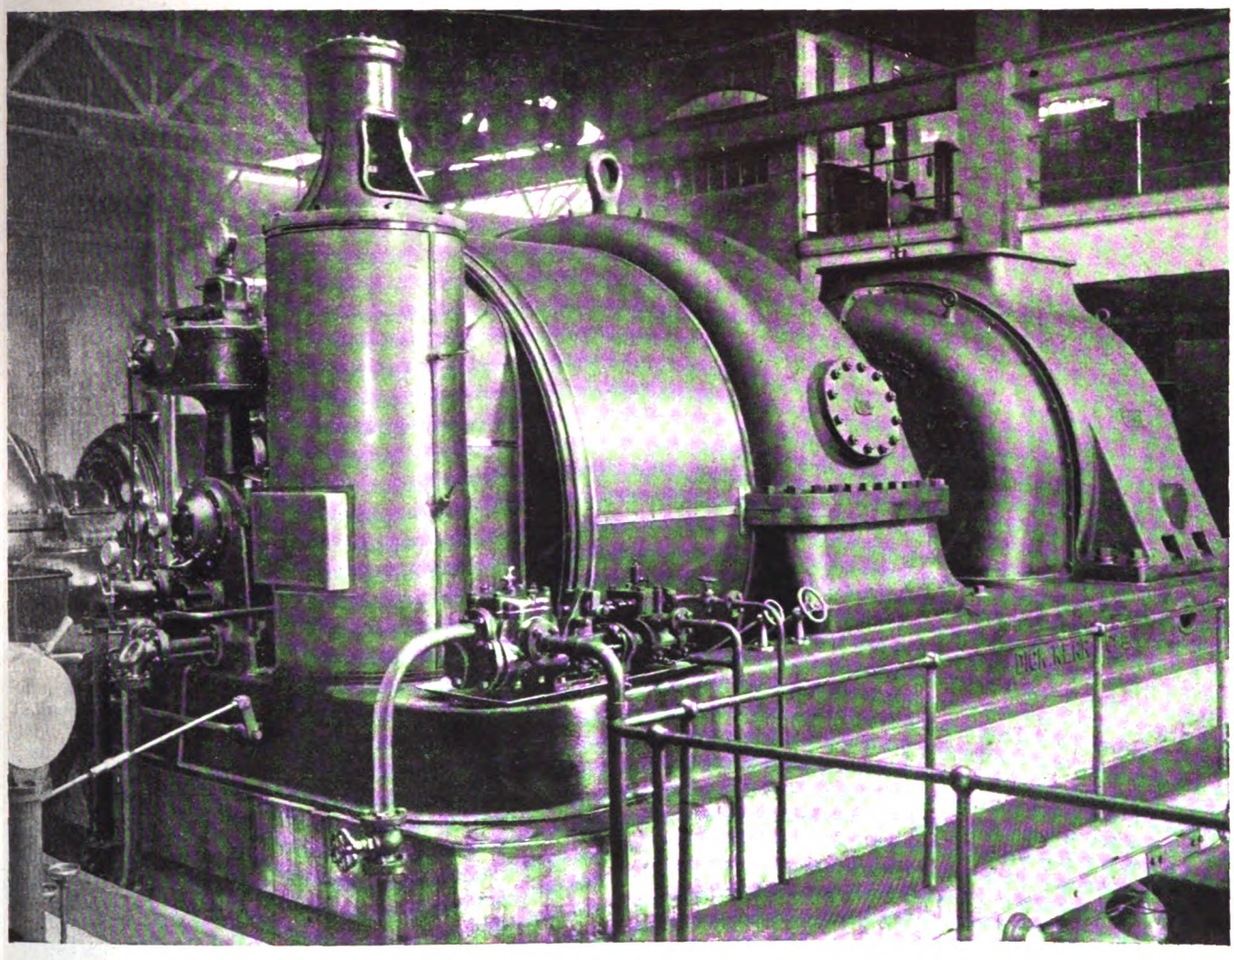
The ventilating air for this machine is passed through a Heenan and Froude cooler, being forced through the machine by an external motor-driven fan and discharged through the chimney opening on the top of the stator. A liberal number of air ducts is provided in the stator, and the cooling is effected by a combination of the radial and circumferential system. An exciter of the overhung type is carried on the end of the alternator shaft.

Although the lifting capacity of the crane was not equal to the weight involved, it was considered desirable that the stator should be in one piece, and the stator was therefore skidded into position, being fixed in a timber cradle supported by timbering, etc., over the condenser well and subsequently, by means of successive lifts alternately on either side of the frame, followed by the insertion of timber packing, raised the requisite amount to allow of its being slid into position on the bedplate.

It will be noted that the main field rheostat is fixed on the bedplate beside the exciter, this arrangement being adopted with a view to saving heavy copper cable runs to the switch gallery. This rheostat can if necessary be motor operated.

The condensing equipment, which was supplied by Messrs. Willans and Robinson, embodies some interesting features. The condenser itself has a cooling surface of 7,300 sq. ft. and operates in conjunction with the Willans rotary air pump system, in which a portion of the circulating water is passed through an ejector which takes the place of the ordinary air pump. The plant is designed to handle 70,000 lb. of steam per hour with an air displacement of 230 cub. ft. per minute. The circulating water is delivered by two centrifugal pumps working in parallel, one of which delivers direct while the other delivers through the air ejector to the condenser; no additional water is required for the operation of the ejector.

The circulating, ejector, and condensate pumps are direct coupled, mounted on one bed, and driven by a Willans single impulse wheel turbine running at 2,000 revolutions per minute. The circulating water suctions are each coupled to duplicate strainer boxes, to enable a box to be opened for cleaning without affecting the circulating water supply to the pumps. This arrange-



Steam End of 5,000-K.W. Turbo-Alternator Set at Hull.

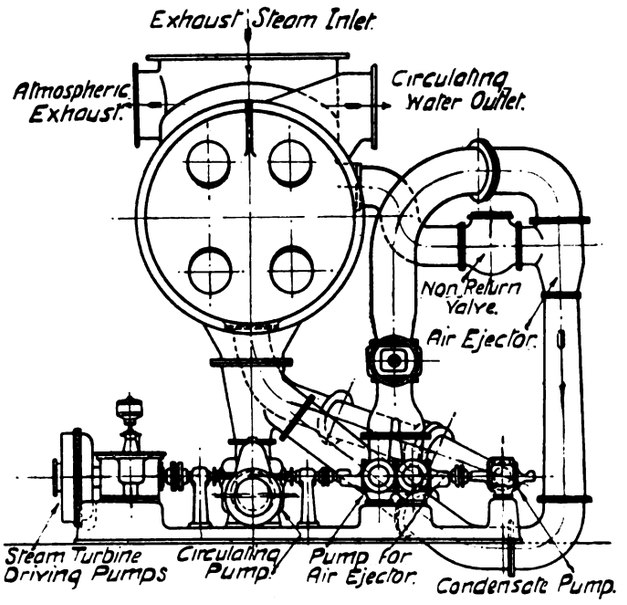
Digitized by Google

ment is necessary, because at seasons of the year the water contains weeds and at others numerous eels. The exhaust steam from the pump turbine is utilised in a direct-feed heater for heating the condensate, and should the latter be insufficient to absorb all the heat available, arrangements have been made by which the condensate can be supplemented from the general feed water supply. For testing the condensate is weighed by a Holden and Brooke water meter.

A flooding valve is fitted to the condenser. The flooding water—which is taken from the town supply—is introduced through a perforated annular pipe fitted below the exhaust flange of the turbine. In case of pump failure this arrangement ensures a gradual transition to atmospheric working.

The guaranteed steam consumptions of this set per KW.-hour were as follows :—50 per cent. overload, 13·5 lb. ; 25 per cent. overload, 13 lb. ; full load, 13 lb. ; 75 per cent. load, 13·5 lb. ; 50 per cent. load, 14·3 lb. ; and 25 per cent. load, 16·9 lb. It is satisfactory to know that these figures have been improved on in service.

In common with other undertakings, that of the Hull Corporation has experienced the difficulty of obtaining the necessary plant to cope with the increasing demand for electricity, and for many months



**Arrangement of Rotary Pumps and Air Ejector, for Condensing Plant at Hull.**

prior to starting up the 5,000-KW. turbine set the two previously-installed 2,000-KW. Dick-Kerr machines had been regularly supplying loads of up to 4,800 KW. between them. The 5,000-KW. set was taken into commission on November 15 last, and two days later was loaded in excess of its normal rating.

Some idea of the growth of three-phase supply in Hull can be gathered from the fact that in 1911, when three-phase supply was started, the load was 100 KW., while at the present time it has risen to 5,200 KW. Over 35,000 H.P. of electric motors are now connected to the mains, and individual motors of large size are being adopted, the department being about to connect up one of 900 H.P. It may be mentioned that the department operates 17 rotary and nine static sub-stations—13 of these are three-phase sub-stations.

We are indebted to Mr. Magoris, the acting city electrical engineer, for his assistance in preparing these particulars of the most recent development in connection with the undertaking which he controls.

## LOAD FACTOR ON TRAMWAYS.

E. S. RAYNER.
*Borough Electrical Engineer and Tramways Manager, Doncaster.*

When the question of efficiency with regard to every phase of the engineering and manufacturing undertakings of the country is under review—and it has been realised through painful experience that to hold our place as a nation in the front line with other nations, the shibboleths of vested interest must receive some very heavy blows—the question of the utilisation to the full of tramway undertakings in this country must receive a very large amount of attention.

The owners of tramway undertakings were content to accept the ordinary passenger receipts as a fair return for their outlay. Those who gave consideration to the question of other forms of traffic were faced by the herculean task of fighting the forces of vested interest, upsetting Acts of Parliament, and deleting clauses inserted in tramway orders. This outlook offered such a small chance of success that no single undertaking considered the risk worth taking. At the present time conditions have altered. With increased expenses the attainment of a far greater efficiency than was ever anticipated in tramway work, and above all the imperative need of national efficiency, the time has come when no opportunity for increasing the productivity of expended capital can be overlooked.

The first cars on the average tramway system start about 5 a.m. and the last cars at present return to the shed about 11 p.m. ; this leaves a period of six hours during which the capital invested is lying dormant, and it appears to me, especially under present conditions, that this time might very well be utilised for the carriage of minerals to central distributing depots. This applies more particularly in the case of coal. Many towns have collieries in the irimmediate vicinity in close proximity to their tramway routes, and at a very small cost connections could be run to the pit heads, where trailers of suitable design could be filled during the daytime and attached to the ordinary cars at night, and thus carry out a distribution of the whole of the local requirements for coal. It is quite a simple matter to arrange for central depots, and in many cases it would certainly pay firms along the tramway routes to bear the cost of a siding from the tramway route into their works. In this way from the point of view of tramway efficiency, the load factor on the tramways would be increased by something like 20 per cent., and the dormant capital expenditure would be reduced to a minimum. Apart from the benefits that would accrue to the undertaking, there is the national point of view.

Taking the conditions at Doncaster as an example, there are no less than five large collieries in operation within a radius of five miles of the centre of the town, nearly all of which are within easy reach of the tramway routes. Coal is purchased from some of these collieries by the electricity department, and at present is delivered as follows :—

It is loaded into railway wagons at the pit head, the following day it is delivered into local sidings, which are only two and a half miles from the pit head. Here it is man-handled into carts, the railway wagons " with luck " being returned to the colliery the following day, the coal being carted from the sidings to the electricity works. This is a most wasteful system of distribution, as the useful running time of the railway wagons cannot exceed half an hour, for which they are out of general service for a period of three days. Again, there is the cost of handling the coal into the cart and

Digitized by Google

the time of the cart returning empty to the sidings. Under the suggested arrangement the tramway trailers would go to the pit head and be taken directly to the electricity works, or any other works with a suitably arranged siding, and the coal tipped directly into the bunkers or elevator hoppers.

When we are asked to economise at every point there is undoubtedly a very simple and effective means of realising great economies in this direction; the cost of the rails and trailers is a comparatively small item.

The great bar to the realisation of this ideal is the fact that the majority of undertakings have clauses in their tramway and light railway orders which prohibit them from attempting anything of this sort. Now that the railways are in the hands of the Government, and now that the shortage of wagons is becoming a very serious matter, it certainly behoves the Government to give assistance with regard to the removal of these disabilities and to relieve railway rolling stock of what is undoubtedly a most inefficient duty. It should be used for purposes where the loading up and terminal wastage of time does not bear such an undue proportion to the useful running or carrying time on the track.

I have not dealt with the carriage of general goods or distribution of tradesmen's goods to outlying districts, as this is receiving a considerable amount of attention, and is more or less an obvious addition to the functions of a tramway system. The elaboration of the general principle is only a matter of local conditions and desirability. As to minerals, so far as I know, this question has not been tackled to any very general extent, but obviously it is one that should receive immediate attention and the wholehearted support of the Government.

## TRADE AFTER THE WAR.

### Encouraging Organisation Prospects.

After a period of inactivity which was more apparent than real, the great subject of the preservation and development of British trade after the war is growing with a rapidity which warrants the strongest hopes. And the development is in the right direction. The results of prolonged and searching investigation by various bodies of experts are coming to light, and the conclusions point so unmistakably in one direction that the politicians who, like others, have learned wisdom from the war, are bound to take action.

Let us do a little cataloguing just to see how things stand. In the spring Lord Balfour of Burleigh's Committee who dealt with general trade policy after the war issued a second report, which amplified their original proposals in favour of imperial preference and of various steps to shield empire trade from German penetration and domination. This was followed by the issue in June of a whole series of reports by Departmental Committees which had been appointed in 1916 to consider the position of various specific trades. All these reports recommend specific action such as the prevention of dumping, prohibition for a period of years of importation of enemy goods, the securing of adequate supplies of raw material, a thorough organisation of home industries, the drawing together and consolidating the interests of employers and employed, the foundation of industrial banks for financing developments, and so forth. The reports in which readers of this journal will be most interested are those of the committees on the electrical trades, the iron and steel trades, and the engineering trades. Another Board of Trade Committee has reported on electric power supply, backing up the former report of the Coal Conservation Committee for a national system of electric power production and outlining a scheme of organisation for carrying it out. A peculiar feature in connection with the reports on various trades is that they appear to have been hung up for a year before publication. They come now, however, at a very appropriate moment.

### Empire Views.

All these reports are now under the consideration of the Government. What is of equal if not of more importance is the fact, officially announced at the end of June, that all such post-war problems are the subjects of resolutions passed by the Imperial War Conference sitting in London. The Inter-Allied Parliamentary Commercial Conference which began its sittings early in July has also been dealing with the subjects from the point of view of the Allies, and of the resolutions passed at the original Paris Economic Conference.

Two features about the Departmental Committees' reports may be emphasised. One is that we have for the first time what may be called official recognition of facts and arguments which have been put forward by manufacturers and traders for years. Protection especially of key and nascent industries, anti-dumping regulations, financial and other aid where necessary, counter-offensive to German trade machinations which have always political and military considerations behind them—these and a hundred other things have been urged for years on deaf and blind British Governments, rendered void of sense by party politics and the catching of votes. One good effect of the war accordingly is that the two blind elements in this country, the Government and the working classes, are now able to see. The other feature of these reports is their wonderful unanimity.

### Power Supply and Electrical Trades.

Readers may be recommended to study with special care the reports of the Board of Trade Committee on electric power supply and of the Departmental Committee on electrical trades after the war. The former is dated April of this year, but the latter belongs to the series which were over a year old when published. The Power Supply Committee's report supports all the conclusions of the Coal Conservation Committee for a comprehensive national scheme of power production and distribution, and works out a scheme for national Electricity Commissioners and District Electricity Boards. These details would be matter for adjustment and settlement if and when the Government bring forward a Bill to give effect to the recommendations. The Electric Trades Committee's report emphasises the obstruction placed legislatively and in other ways on the development of electrical industries in this country, and advocates a thorough reform of legislation and conditions affecting the generation and distribution of electricity and affecting the promotion, construction, and operation of tramways and light railways. The prohibition of the import of enemy goods and the imposition of import duties are insisted on, as well as numerous other means for helping the British electrical trades. The part of the report dealing with electric traction is specially grateful.

The subjects covered by all these reports are of vast extent and importance, and we have only been able to make brief reference to them. The full reports themselves should be carefully studied, and it will then be realised that there is at last some chance of a radical change for the better being effected in trade conditions in this country.

LONDON, JULY 11, 1918.

**Maximum Fares.**

Sir Albert Stanley, President of the Board of Trade, is to be congratulated on the promptness of his recent action in connection with the question of maximum tramway fares. Within a few days after the issue of the report of the Select Committee which was appointed to investigate the subject, he introduced in the beginning of July a Bill in the House of Commons the object of which is "to enable the statutory provisions affecting the charges which may be made in respect of certain undertakings to be temporarily modified." The Bill gives effect to the contentions of the two tramway associations and to the recommendations of the Select Committee. It is, we think, unfortunate that the Bill has been made to apply to other undertakings, such as gas, water, and electricity undertakings, the conditions of which are by no means identical with those that prevail among tramway authorities. All these classes are, it is true, suffering from increased expenses for wages, materials, and fuel, and some of them, even when making their statutory maximum charges, are unable to make both ends meet, but they do not suffer from the same disabilities as tramways, and their inclusion in the Bill will raise difficulties that a Tramway Bill pure and simple would probably have escaped. Under the Bill a Government department—in the case of tramways, the Board of Trade—will have power to modify the statutory provisions, so that higher charges than those now authorised may be made. There are limitations on the increased fares or charges which may be allowed, but even with these the owners of the undertakings should be largely relieved from their present anxieties. As the public is so largely affected by the Bill, and in so many different ways, there will undoubtedly be considerable opposition; but so far, at least, as tramways are concerned, the case for the change is overwhelming. In connection with railways the public have had to submit to an increase of 50 per cent. in fares, and tramways have quite as good a case. They have, in fact, a better case, as they are not, like the railways, guaranteed their pre-war dividends. The Bill is to remain in force only for the period of the war and for two years thereafter. The second reading was passed on July 8.

**London Police Restrictions.**

One of the troubles under which tramway undertakings in the London area have always suffered, and from which tramways in other parts of the country are free, is the restrictions imposed by the Metropolitan Police. For some reason the chief officials of that force have always looked on tramways with a jaundiced eye, and have hampered them in every possible way. Unfortunately they have great powers in that direction, and the local authorities in the metropolis have no control over them. Some London police objections have only been overcome by Parliamentary powers being got for the purpose, but it is not often easy to obtain that heroic remedy. At the present time the police regulations are specially troublesome. They were framed many years ago, and in times of peace, for the then existing conditions, and in such times it was generally possible to comply with them, even if at much inconvenience or expense. But now when times are wholly changed, when every possible expedient should be adopted to meet emergencies and to allow of the work of transportation being carried on in spite of the scarcity and high cost of labour and materials, police regulations remain practically unaltered. That

Digitized by Google

would not matter so much were it not for the fact that attempts are made to enforce them with the cast-iron monotony and indifference to public convenience characteristic of officialdom. For example, we hear of the difficulties which are thrown in the way of getting licences for car drivers. The number of suitable men obtainable for training as drivers is very small; yet when some are found all the old trouble is raised if every punctilio of the police regulations cannot be complied with. Again, there is paint. Cars must be painted and varnished at certain intervals, according to the regulations. But how can that be done if the paint and the varnish cannot be had, or if painters cannot be found? Yet there are reports of attempts to prevent cars going on the road because they have not been provided with the requisite number of coats of varnish. Obviously the only painting which should be done at the present time is that which is absolutely necessary for preservation. Again, we hear of police objections to slight variations in car lighting arrangements with a view to avoiding accidents in darkened streets. The fact, of course, is that no car lighting restrictions are now necessary any more than they are necessary in the case of railways. The fact of the matter is that the Home Office which is, or is supposed to be, responsible for the Metropolitan Police, ought to take the subject in hand, and impress on its subordinates the necessity of giving tramway managers the fullest possible opportunity to maintain services which are so essential to the prosecution of the war. The managers are responsible officers who are in a far better position to judge what precautions are desirable and necessary than any officials of Scotland Yard can be. The tramway authorities of the London area should combine to bring pressure to bear on the Home Office, and for this purpose they might well work through the Association of Metropolitan Tramway Managers, which could, of course, obtain the aid of the two national tramway associations, whose influence has been an exceedingly helpful factor in various other ways since the outbreak of war. Fortunately only the London area is concerned, but that means the interests of seven or eight millions of people, a great number of whom are directly concerned in war work.

**Reconstruction in Electrical Enterprise.**

There can be no ground for questioning the wisdom of the inquiries of three committees on subjects appertaining to electrical and traction matters. None of the three is the offspring of visionaries; only one has its origin in the Ministry of Reconstruction, and that one dealt with the practical question of coal conservation. Closely linked to that are subjects taken up by the remaining two committees. The latter were appointed by the Presidents of the Board of Trade, past and present, the task of one being to consider the electrical power supply, while to the other was deputed the consideration of the position of the electrical trades after the war. With the first and second reports we have already dealt. Their main conclusions are on the whole acceptable both from the national and the municipal points of view. The error of the past—a too parochial treatment—is especially complained of in the third report—that of the Departmental Committee on the Electrical Trades. It is given in considerable length elsewhere in this issue. The committee have rendered a national service by their trenchant exposure of the causes of the injury inflicted upon the electrical industry hitherto, and their remedial proposals should command approval. The term "trades" fails to do justice to the comprehensive field embraced by the committee's deliberations. These are divided into four sections, relating to electricity generation and transmission in the United Kingdom, electric traction, manufacturing, and financial interdependence between manufacture and finance. A commentator can do little else than express a hope that immediate efforts will be made to support the committee's recommendation that remedial and unifying legislation should be introduced forthwith. Unless that course is adopted the nation will be blind to one of the lessons of the war, namely, that the conflict has demonstrated that the safety and trade of the Empire are dependent on the proper employment of electricity. It has always been regarded as a key industry by Germany, with results that for years have been disastrous to this country and the Colonies. For one of the principal recommendations support can be adduced from reports submitted by committees of the Legislature during the past two decades. We refer to the reform of

Digitized by Google

procedure relative to private Bills and Provisional Orders, which was dealt with in these columns on April 11 last, following recommendations presented by Acquisition of Powers Sub-Committees of the original Reconstruction Committee. Not the least important sections of the present report are the statements relating to the paralysing effects of the purchase clauses in the legislation governing electrical supply and tramway companies. That provision not only debars a company from keeping abreast of technical progress, but prevents the expenditure of fresh capital to the best advantage, with consequent disadvantage to the public interest. If the parties interested can put forward a better method of dealing with supply and traction matters than the suggested independent Board of Commissioners, they should table their scheme without delay. The report wisely insists that provision should be made for railway electrification being carried out on some settled general principle, so that all main or local lines may be properly co-ordinated, and the power-stations placed in positions adapted to both military and civil needs. The best tribute to the worth of the report is its impartiality. The execution of its recommendations may, for the time being, militate against individual private interests. On the other hand, it should open up new prospects for enterprise in electric traction, and to British electrical manufacturers promises opportunities such as they have never before enjoyed. To secure these advantages every effort should be put forth without delay.

## SAFETY FIRST IN INDUSTRY.

A conference, arranged by the London Safety First Council, was held at the Mansion House on June 12, to inaugurate a national industrial "safety first" campaign. Lord Leverhulme, who presided, said that in Germany £50,000,000 was saved in industry every year by attention to "safety first" appliances. The object of the new movement was to ensure that we should have throughout the United Kingdom such a condition of "safety first" as would give us the equipment for winning the industrial war after we had won the military war.

Mr. W. Hayes Fisher, M.P., President of the Local Government Board, welcomed the movement, to which he promised to give every assistance. It was satisfactory, he said, to learn that from street accidents the sphere of operations of the Safety First Council was to be extended to accidents arising from industrial occupations. They must use education to make people see that it was their duty to themselves, to their families, and to the State to take every possible precaution to preserve their lives.

Mr. G. Roberts, M.P., Minister of Labour, said that no works should be tolerated in the country unless they were sanitary and properly lighted and the machinery was safeguarded. Then they would be entitled to expect the workers to take every care to avoid accidents and disease. They must insist upon certain standards of equipment in the various works and factories, and in this matter he promised the support of his department.

Mr. W. Brace, M.P., Under Secretary for the Home Department, wished the movement every success, and assured the promoters of the co-operation of the Home Office.

## A BILL TO INCREASE STATUTORY CHARGES.

MAXIMUM FARES ON TRAMWAYS, ETC.

The following is the text of a Bill which has been introduced in the House of Commons by Sir Alfred Stanley, President of the Board of Trade, to enable the statutory provisions affecting the charges which may be made in respect of certain undertakings to be temporarily modified.

1. (i.) Where it appears to the appropriate Government Department that the financial position of any undertaking to which this Act applies has been adversely affected by circumstances arising out of the present war, the Department may, if they think fit, by order provide for the modification of any statutory provisions regulating the charges to be made by the undertakers, and of any statutory provisions consequential on or supplemental to any such provisions as aforesaid, for such period during the continuance of this Act, in such manner, and subject to such conditions, as appear to the Department to be just and reasonable:—

Provided that:—

(*a*) Where the undertakers are a local authority no modification shall be authorised which will increase the statutory maximum charge by more than 50 per cent., or which is more than sufficient so far as can be estimated to enable the undertaking to be carried on without loss; and

(*b*) In any other case no modification shall be authorised which is more than sufficient to enable a dividend on the ordinary stock or shares of the undertaking to be paid at half the standard or maximum rate of dividend, if any, prescribed for the undertaking, or at half the pre-war rate of dividend, whichever is lower.

(ii.) An application to a department for the purposes of this Act shall be accompanied by such information, certified in such manner, as the department may require with respect to the financial position of the undertaking in question.

(iii.) The undertakings to which this Act applies are tramway undertakings, including light railways constructed wholly or mainly on public roads, and undertakings for the supply of gas, water, and electricity.

(iv.) For the purposes of this Act—

The expression "statutory provisions" includes the provisions of any order having the force of an Act;

The expression "appropriate Government Department" means, in relation to gas and water undertakings carried on by local authorities, the Local Government Board, and in relation to other undertakings the Board of Trade;

The expression "local authority" includes any commissioners, trustees, or other public body of persons carrying on, otherwise than for purposes of private profit, any undertaking to which this Act applies;

The expression "pre-war rate of dividend" means the average rate of dividend for the three financial years immediately preceding the war.

2.—In the application of this Act to Scotland the Secretary for Scotland, and in the application of this Act to Ireland the Local Government Board for Ireland, shall be substituted for the Local Government Board.

3.—(i.) This Act may be cited as the Statutory Undertakings (Temporary Increase of Charges) Act, 1918.

(ii.) This Act shall have effect during the continuance of the present war and for a period of two years thereafter, and no longer.

## REPORT OF SELECT COMMITTEE ON FARES.

The recommendations of the Select Committee of the House of Commons on fares were given in our issue of June 13. A full report of the proceedings of the committee and minutes of evidence have now been officially published (Stationery Office, price 2d.).

The committee was appointed on April 24, and consisted of the following:—Sir William Pearce, chairman, Captain Barnett, Sir James Boyton, Mr. Broughton, Sir Arthur Fell, Mr. Randall, and Mr. Watt. Three meetings were held, and evidence was given by Mr. R. J. Howley, vice-chairman of the Council of the Tramways and Light Railways Association and joint manager of the British Electric Traction Company; Mr. A. L. Barber, secretary of the Metropolitan Electric Tramways, Limited, and Mr. C. J. Spencer, honorary secretary of the Municipal Tramways Association of Great Britain and Ireland, and general manager of the Bradford Corporation Tramways.

# REPORT OF BOARD OF TRADE ELECTRICAL TRADES COMMITTEE.

## LEGISLATIVE RECOMMENDATIONS RELATING TO TRACTION, MANUFACTURING, ENGINEERING, AND FINANCIAL MATTERS.

Sir Albert H. Stanley, President of the Board of Trade, has issued the report of the Departmental Committee on the Electrical Trades, which was appointed by his predecessor, Mr. W. Runciman, in April, 1916, to consider the position of the electrical trades after the war, with especial relation to international competition, and to report what measures, if any, are necessary or desirable in order to safeguard that position. The committee comprised the Hon. Sir C. A. Parsons (chairman), Mr. J. Annan Bryce, M.P., Mr. T. O. Callender, Mr. James Devonshire, Mr. B. M. Drake, and Sir John Snell. The committee heard evidence from the Institution of Electrical Engineers, the Incorporated Municipal Electrical Association, the Association of Electric Power Companies, the British Electrical and Allied Manufacturers' Association, the Cable Makers' Association, the Tramways and Light Railways Association, from eminent consulting engineers, from manufacturers of machinery, cables and other electrical appliances, directors and engineers of public supply undertakings, from bankers, and many others. We append lengthy extracts from the report.

### NATIONAL IMPORTANCE OF THE ELECTRICAL INDUSTRY.

The committee is of opinion that the national importance of this industry has never been realised either by Government or by the public, and as a consequence both the industry and the country have suffered from legislative errors.

Through the efforts of Faraday, Wheatstone, Kelvin, Swan, Hopkinson, and many others, Great Britain was, and should have continued, first in electrical enterprise. Mines and factories were so situated as to gain rapid advantage from the application of electrical science, and railways, especially the urban and suburban lines, were, owing to density of population, ideally suited to electrification. In order, however, to bring electrical energy into practical use it was necessary to employ cables, either underground or overhead, the installation of which involved interference with streets, roads, and private lands. Manufacturers of electrical plant have been held back while Parliament and local authorities debated how the distribution and use of electricity might be prevented from infringing conventional conceptions of public privileges and vested interests. Hence the progress of the industry has throughout been hampered by political considerations. Abroad there were strong encouragements, in Great Britain irksome restrictions, and the evil effects on the British electrical industry justly entitle it now to special remedial measures, which can be secured only by legislation. Such legislation should be passed without delay.

The prosperity of our industries depends largely on cheap energy for driving machinery, and even a fractional reduction in price is of importance in determining the ability of manufacturers to compete in the world's markets. The application of electricity to agricultural purposes is also claiming attention, and will, without doubt, extend. The scientific replanning of our distribution of energy would effect a saving of 50 million tons of coal per annum. This replanning would reduce the cost of power for manufacturing, lighting of streets and houses, propulsion of railway, tramway and road vehicles. Witnesses of high authority estimate the loss incurred through failure to take full advantage of electrical progress at £100,000,000 a year, a loss preventable by concentrating generation under improved administration.

The value to this country of the electrical manufacturing trade already amounts to 22½ millions sterling a year. These figures represent only a fraction of the trade which can be obtained if the blunders of the past be rectified.

It is not too much to say that the war has demonstrated the safety of the Empire to be dependent on the employment of electricity. The output of munitions in the great industrial areas could not possibly have attained anything like its present scale had not an enormous aggregate horse-power of electrical energy been available for the supply of power and light. The emergency has proved the electrical industry to be a "key industry." The committee proceed to report on the position of the industry from five sectional points of view.

### GENERATION AND TRANSMISSION IN THE UNITED KINGDOM.

Section I. states that as the production of generating and distributing plant forms the chief part of electrical manufacturing it has been necessary to consider whether present methods of generation and distribution are adequate, and if not how they can be improved. The witnesses examined on these points concur in the opinion—

(a) That it is of vital importance to every industry to have a free circulation of cheap and efficient power supply.

(b) That owing to obstacles caused by the present administrative methods, which they unanimously condemn, the supply has till now been deficient, with consequent serious loss to the nation.

(c) That the removal of these obstacles will be followed by a widespread extension in the use of electricity and a greatly increased demand for every kind of electrical plant.

The home demand alone for electrical machinery and apparatus should already have been sufficient to employ a manufacturing industry with at least three times the present output. There is therefore urgent need to place electrical energy at the disposal of all manufacturers and at the lowest possible price, which can best be done by the employment of large units in large central generating stations with suitable interconnection between the various areas of supply. This will involve the subordination or discontinuance of the smaller and uneconomical stations, and, as already stated, if full advantage is taken of the modern applications of electricity the annual saving in fuel alone would be not less than 50 million tons. The obstacles complained of arise partly from the prevailing official atmosphere and partly from legislative enactments. In this country the attitude towards electrical progress has been far too restrictive, in contrast with the widespread official and public encouragement of the use of electrical energy abroad.

The existing procedure is complicated and responsibility divided. At present all new or extension orders authorising electric supply must be sanctioned by the Board of Trade and afterwards confirmed by Parliament. All administrative matters affecting electrical undertakers generally are determined by the Board of Trade. The regulations of the Board of Trade are directed primarily to secure the safety of the public, and secondarily to ensure a proper and sufficient supply of electricity. Whether the undertaking be municipal or private, local considerations, owing to the possible exercise of Parliamentary pressure, may become the determining factor in the action of the authorities. In the past lack of foresight has allowed even adjacent undertakings to establish works differing, not only in type of plant and mains, but also in pressures and frequencies, with the result that linking-up and interchange of power is now extraordinarily difficult and costly. The mischievous effect of that policy has been brought into prominence by the attempt now being made to comply with the circular issued in 1916 by the Board of Trade urging undertakers to link up in the national intersts so as to reduce the consumption of coal and economise labour.

As a result of the Board of Trade's circular a joint committee has been appointed by the Incorporated Municipal Electrical Association and the Incorporated Association of Electric Power Companies to consider the question of linking up. This joint committee has issued a constructive memorandum on the present position of the public supply of electricity, including the following significant paragraph :—

> Sufficient time has elapsed and sufficient experience is available to show the defects of the original legislation. Experience has shown that the comparatively small areas of the companies and local authorities working under Provisional Orders are, in many cases, insufficient to enable advantage to be taken of modern improvements in plant. It is also evident that liability to compulsory purchase imposed upon the undertakings of companies working under Provisional Orders has restricted enterprise and retarded the development of electric supply. Since some of the companies operate in very important districts, immediate measures should be adopted to deal with this difficulty.

In cases where provision for compulsory purchase has been inserted, in the supposed interest of the public, it is impossible for the undertakings, as the time of purchase approaches, to keep abreast of technical progress or to expend fresh capital to the best advantage. In this case there is no necessary inconsistency between the interests of the public and of the individual, and it should be the aim of the State to secure to the nation the full benefit of scientific progress. Attention is also called to the anomalous inequalities of tenure as between municipalities, Parliamentary companies, and companies working under Provisional Orders.

The general concensus of evidence is that all matters concerning the development of electrical supply should be placed in the hands of a new and independent Board of Commissioners free from political control and untrammelled by traditions. It has been suggested that the Commissioners should be invested with the requisite authority to deal adequately with all questions of new Provisional Orders, interconnection of electrical areas, extensions or modifications of existing areas of supply, wayleaves and all technical questions connected therewith, as well as all matters affecting tramways and light railways (Section II. of this report), and that among its first duties the Board should be required (*a*) to advise upon detailed remedial and unifying legislation governing all electrical supply; (*b*) to determine all questions of concentration for generation purposes with resultant economy of coal and other savings; (*c*) to prepare at once a properly co-ordinated scheme of expansion which will enable local developments held over during the war to be proceeded with on proper lines immediately after the war.

The committee, recognising the great importance of these proposals and their far-reaching effect, addressed a memorandum to

Digitized by Google

the Board of Trade on January 19 last. As a result of this communication a new committee has been appointed "to consider and report what steps should be taken, whether by legislation or otherwise, to ensure that there shall be an adequate and economical supply of electric power for all classes in the United Kingdom, particularly industries which depend upon a cheap supply of power for their proper development." (This committee's report appeared in our issue of June 13.) The recovery of by-products from the distillation of coal has been discussed as an alternative to direct combustion of raw coal under boilers. This process has not yet been developed, but in any case it can be operated to advantage only in connection with large generating stations.

The evidence leads the committee to the following conclusions:—

(1) Government should recognise the dependence of the State, both from military and industrial standpoints, upon the supply of electrical energy regarded as a "key industry."
(2) The distribution of electrical energy should be regarded no longer as a parochial but as a national question of urgent importance.
(3) The present system of electrical generation and distribution is behind the times, and is a serious handicap in international competition.
(4) The present conditions are mainly due to faulty legislation, and to divided and therefore weak executive control.
(5) Remedial and unifying legislation governing the supply and distribution of electrical energy should be introduced forthwith.
(6) It is imperative that questions concerning the distribution of electrical energy should be freed from political influence, and considered solely from the point of view of national requirements, technical possibilities, and naval and military needs.
(7) Co-ordinated and well-considered schemes are necessary to enable local developments held over during the war to be handled on proper lines when peace is declared.
(8) The determination of questions concerning concentration of generating plant with a resulting economy of coal and other savings, requires immediate attention.
(9) That only by such steps can the electrical manufacturing industry be fully developed, not only for the home trade, but as a consequence for the great industry now maturing overseas; that the gain to the State from a well-planned scheme of reconstruction will be inestimable; and that the items which are capable of reasonable calculation, such as saving in fuel, reduction in factory costs, and increased output will together represent not less than £100,000,000 per annum.

### ELECTRIC TRACTION IN THE UNITED KINGDOM.

In Section II. the committee says:—In deliberating on electricity supply the committee has had to consider the position of electric tramways and light railways, and, to some extent, the general electrification of railways. The output of electrical energy for traction purposes is already nearly 1,000,000,000 units per annum.

There are at present three methods by which powers may be obtained to construct tramways or light railways on public roads, viz., (*a*) by Private Bill; (*b*) by a Board of Trade Order which must be confirmed by Parliament; and (*c*) by procedure under the Light Railways Acts of 1896 and 1912. Much evidence was given to show that the Tramways Act, 1870, having been framed in the days of animal traction, is long since out of date, but the procedure under the Light Railways Acts, instead of being cheap and expeditious as intended, has proved to be the reverse, and that improved legislation is required. The paralysing effect of the purchase clause in the Tramways Act was illustrated by many cases given in evidence, and frequent reference was made to the report of the Royal Commission on London Traffic (1905), and the recommendations therein on the subject of the local veto.

An acknowledged traction authority urged, in advocating the establishment of an independent Board of Electricity Commissioners, that one of its most important duties should be the framing of a simplified model Bill to replace the Tramways Acts, 1870, and the Light Railways Acts. This model Bill would deal with some of the anomalies and disabilities under which the tramway industry suffers, as, for instance, recurring periods of purchase, the incidence of the burden of road repairs, periodical revision of fares, and the settlement of rating questions and running powers.

The Committee concurs with the evidence that unless there be a complete revision of the present powers, the development and growth of tramways and light railways will continue to be impeded, with a consequent reduction in the demand for manufactured products.

The electrification of railways demands consideration from a national point of view. It should be dealt with homogeneously, and not be allowed to develop in a piecemeal and desultory way. A witness of great experience stated that a return of from 10 to 15 per cent. on the capital involved could be secured from the electrical operation of some of our important railway systems. The witness added that "incidentally one may point out that probably, from a railway man's point of view, the conveniences of electric traction are more important than the direct financial results. Probably, the conveniences of the electric loconotive and the flexibility of it from a traffic point of view, will ensure its adoption more than the direct financial gain, but that does not alter the fact that I am quite satisfied from a thorough investigation of two complete systems (one a very important main line) that electric traction *per se* would pay. If that is so, then of course this country ought to develop a very prosperous industry at home, both from the point of view of the user of electrical apparatus and from the point of view of the manufacturer, and on that ground ought to have a very high percentage of the world's export business."

The committee is of opinion that such an important development as the electrification of railways, which will certainly take place in the near future, should be carried out in accordance with some settled general principle, so that all main or local lines may be properly co-ordinated, and the power-stations placed in positions which will have regard to both military and civil needs.

### MANUFACTURING.

Section III. of the report comprises three and a half pages. It states that the term "electrical manufactures" is generally understood to include boilers, turbines, or engines and the electrical generators which they drive, and the mains, instruments, and apparatus connected with the distribution and consumption of electrical energy. The committee has considered the relative position of electrical manufacturing in Great Britain and in competing countries, the different conditions under which the industry has been developed in each country, and the remedial measures recommended. The manufacturing of electrical machinery and apparatus in Great Britain has been, with few exceptions, far from prosperous. Most of the companies have sustained serious losses, necessitating the writing down of capital. Tables have been put in evidence showing that thirty-two electrical firms, with an aggregate initial paid-up capital of just over £15,000,000, have been obliged to write off £3,125,000. The tables further show that few of such companies have ever earned a satisfactory return on their capital. The notable exception has been cable making, which has been consistently successful in maintaining its lead, both in the quality of its manufactures and in financial results, and has thus been able to hold its own in the world's markets.

Even allowing for mistakes inevitable at the inception of an industry, and for the rapid advance of electrical science, involving changes in types of machinery, the committee is convinced that the results would not have been so generally unfavourable but for the hampering conditions peculiar to this country, some of which are described in Section I. On the other hand, the German electrical manufacturing industry has been very prosperous. The approximate annual value before the war of the total products of electrical plant, mains, and appliances in Great Britain and Germany respectively are set out herewith:—

| | Great Britain. | Germany. |
|---|---|---|
| | £ | £ |
| Total electrical products ... | 22,500,000 | 60,000,000 |
| Exports ... ... ... ... | 7,500,000 | 5,000,000 |
| Imports ... ... ... ... | 2,933,000 | 631,000 |
| Consumption of home-made machinery ... ... ... | 15,000,000 | 45,000,000 |

The approximate annual value of home-made electrical machinery used in Germany before the war per 100 people was about £70, which contrasted with a consumption in this country of only £33. It must be noted that of the £22,500,000 manufactured in this country, a large proportion has been produced by concerns under foreign control, and in the case of British exports a proportion is known to consist of foreign manufactures reshipped as British goods. Many of the greatest electrical inventions originated in Great Britain, and there is little doubt that, as in the case of steam, our lead would have been maintained had the prevailing conditions been equally favourable, particularly as this country already possessed ample skilled labour on account of its existing engineering development. Another factor retarding electrical progress in Great Britain has been the strength of the gas interests and the influence they exerted to stifle competition.

Again, foreign governments, appreciating the importance of conserving their home markets as a basis for the development of overseas trade, imposed protective duties, and exerted influence on State departments to purchase native goods. The German Government has always been ready to help its manufacturers to extend their trade abroad. German diplomacy has been freely placed at the service of German industry, and, when necessary, has not hesitated to exert pressure in the highest quarters.

The policy of German manufacturers has been studiously directed not only to secure orders in this country under the open competition permitted by our fiscal system, but also to the effective destruction of British industry. Their business methods have been expressly designed to dominate the markets of the world, to which end they could count on unlimited support from their Government and their banks. An industry cultivated under such encouraging conditions has had an immense advantage in international competition in open markets. Such markets included the United Kingdom, the Dominions of the British Empire and the South American Republics,

Digitized by Google

whose industries had been largely developed by British capital, especially in the field of railway construction, and German manufacturers have made strenuous efforts to secure and hold those markets.

The importance of a close connection between finance and manufacture cannot be over-estimated. German financiers have always identified themselves with German industries, and it has been their custom, when providing money for a concession or contract, to enforce the use of German-made machinery. This applied not only to the original contract, but to subsequent replacements and extensions, the importance of which in a new and constantly developing field has not hitherto been sufficiently appreciated by British manufacturers and financiers.

Some British companies operating in South America have, owing to the influence of German finance, entirely ceased to purchase British goods. Many instances have been cited, including the well-known case of the Victoria Falls Company, in which orders which ought to have come to Great Britain were by financial influence secured to Germany. At the outbreak of war negotiations were in progress for the acquisition by Germany of financial control in existing companies in the United Kingdom, as well as in the British Dominions and India, which, if successfully concluded, would have still further restricted the use of British goods in many parts of the Empire.

Much of the floating finance to enable German manufacturers to secure and carry out their contracts both abroad and in British Dominions has been provided in London, so that our financiers and discount houses have often found the means by which Germany has fought the British manufacturer.

There is conclusive evidence of the existence of German control over companies ostensibly British, and that German control has also often been exercised, to the detriment of British interests, indirectly through companies incorporated in America, Switzerland, and other neutral countries. For several years there has been in Germany a consistent policy of amalgamation and association, and several establishments of world-wide importance have thus been built up. Only two or three German companies are seriously engaged in the electrical business overseas, and the competition which British manufacturers have to face is almost entirely with these houses. They have enormous financial strength, for, in addition to their own capital, they are closely bound up with leading financial institutions not only in Germany but elsewhere on the Continent, in a manner which does not exist in Great Britain.

In contrast with this pollcy of association, which has proved so successful both in Germany and in America, Great Britain has always discouraged combination, fearing a rise of prices to the detriment of the consumer. As a result, numbers of small concerns have arisen, each struggling against the other for bare existence. By association it would be possible to maunfacture each class of apparatus in the most suitable factory, the management of which would thus be concentrated on its own specialty instead of being wasted on a variety of products. The committee is convinced that under properly organised combination or association the cost of production will be materially reduced, and that there is no reason to fear that enhanced prices will be charged to the consumer, as a result of such combination.

If electrical factories, which are unquestionably necessary on national considerations, are to be maintained in a state of efficiency, steps must be taken at the earliest possible moment to deal with the problem. A sound and permanent industry can be established not only to supply the home market, but to secure a much greater proportion of the overseas trade. This can be done either by amalgamation among the companies or by the development of the practice of association for common purposes. An important advantage resulting from such combination would be the extension of standardisation, which the committee considers is of the highest importance from a national as well as from an international point of view. It is to be hoped that the Government will do its utmost in future to accept recognised standard plant, as its example in the past, in calling for modifications, has had a pernicious influence on other buyers. During the war makers' standards have perforce been accepted, and have been found to satisfy all practical requirements.

The necessity for protective duties has been emphasised by many witnesses connected with manufacturing interests, and has been frankly recognised by representatives of purchasers. The committee is convinced that adequate protection is necessary, and should be given at least for a period.

Great emphasis has been laid on the unfavourable conditions of railway and steamship transport in this country as compared with those in Germany, where very low export rates are quoted direct from the factory in Central Europe to destination in Great Britain, her Dominions, or other countries.

The committee considers that the preference to foreign traffic which results from our present railway and maritime rates calls for immediate correction. No railway rates on imported goods should be less per mile than the standard rate charged for similar British goods, and it recommends that it be made impossible for any steamship, whether British or foreign, which makes use of British ports, to charge lower rates to foreigners than are made to British shippers for equal distances. The committee directs attention to the report and recommendations made by the Royal Commission on Canals, and urges that greater use be made of inland water transport. The inadequate facilities for handling cargo at many of our ports should be remedied.

A better understanding between employers and employed is essential if the country is to take advantage of the business which will undoubtedly be forthcoming after the war. The committee, from its own knowledge and from the evidence given, desires to emphasise the loss that has occurred from unsatisfactory and ill-regulated working conditions, from arbitrary restrictions of output. and from opposition to the use of labour-saving machinery, resulting in a serious diminution of production. There must in the future be more harmony and sympathy between employers and employed, a general improvement in working conditions of the factories, and better provision for housing.

The committee was asked to prepare an interim report regarding measures against enemy trade to be adopted on the conclusion of peace. This interim report was submitted on October 11, 1916, and is set out in Appendix A. Evidence since received has strengthened the committee in its opinion that even more stringent means should be taken to restrict, after the war, the importation of such manufactures as can be made in British factories.

**INTERDEPENDENCE BETWEEN MANUFACTURE AND FINANCE.**

Just over one page is devoted to this section. The committee was asked to submit an interim report on the questions of banking and finance, as they affected the electrical industry in all its departments. This was presented on July 20, 1916, and is given in Appendix B. Electrical manufacturing is perhaps more dependent than any other on the help of a powerful financial system. The major part of its activity is connected with enterprises involving heavy expenditure which may not become immediately remunerative, and the concessionaire, inventor, contractor, or manufacturer must therefore, for such projects as the construction of a new electric railway, the electrification of an existing line, the introduction of new processes and apparatus, or the equipment or extension of a generating or transmission system, have facilities for recourse to financial organisations prepared to stand a temporary capital lock-up of considerable magnitude. In Great Britain such facilities do not exist in an adequate degree, for though she is the financial centre of the world, and can claim to be the pioneer in modern engineering, there has never been created any organised co-operation between her finance and her manufacture.

The British manufacturer suffers from another disability. He might naturally expect that when the aid of British capital is obtained the orders for the plant purchased with it would be placed at home. But, paradoxical as it may seem, he is often baulked of his hopes through the very fact that London is the financial centre of the world, and has attracted to it so many foreigners as to have created an atmosphere more cosmopolitan than national. The British financier has not only lost any sense of obligation to apply British capital for the benefit of British industry, but has allowed his activities, whether as a capitalist or a company promoter, to be constantly exploited in the interests of German industry.

In Germany a thoroughly organised alliance, offensive and defensive, has been elaborated between manufacture and finance. Banks and manufacturing concerns have common directors, and on the boards of both there sit technical and commercial experts. The German financiers do not, at the start, attempt to place an enterprise on the market as is the practice in England. Guided always by expert advice they seldom touch a project in itself unsound. They find the money themselves or through their allied groups, and, not afraid of the lock-up, wait till success is shown before they unload on the public.

An important instrument in the development of the system of so-called "peaceful penetration" has been the Schimmelpfeng Institute, a commercial intelligence agency with branches in all the principal business centres of the world, which has supplied detailed information regarding business firms to its head office in Berlin, and has practically acted as a spy system. The Board of Trade has lately made an order to wind up the business of the Schimmelpfeng Institute in this country. By these means, and by agreements with foreign concerns, the German manufacturers have secured a commanding influence in the electrical business in the neighbouring countries, notably in Russia, Italy, Belgium, and Switzerland, and if measures are not taken in time this penetration will certainly continue everywhere after the war. The balance sheets for 1915 of the Allgemeine Electricitäts Gesellschaft, the Siemens-Schückert Company, and the Bergmann Company show cash balances of 6¼, 2½, and 1⅛ millions sterling respectively. This accumulation is recognised as available for peace products, and the fact emphasises the necessity for financial assistance being at the disposal of British manufacturers who, owing to excess profits duty and other taxation, find great difficulty in making provision for trade after the war.

That which has been done in the past by German financial institutions, and recently by French and American syndicates or industrial banks, could undoubtedly be achieved by one or more

Digitized by Google

British financial institutions specially concerned with engineering enterprise. Mr. Runciman, then President of the Board of Trade, made the following statement in the House of Commons on January 10, 1916:—"The extension of commercial banking, as distinct from the more conservative form of banking which is our custom in this country, might well be fostered here. . . . If our banks cannot, in consonance with their present system, be more adventurous, let us have some additional institutions. At all events, commercial banking must play a large part if we are to hold our own against Germany." Mr. Runciman gave practical effect to his opinion by arranging for Government assistance in the creation of a bank designed to aid in the commercial and industrial development of Italy.

The committee is strongly of opinion that the establishment of industrial banks is essential not only for the purposes mentioned in the interim report, but in order to provide capital both for the reorganisation and expansion of the engineering industry. Such institutions assisted by the advice of expert assessors would help to protect the public against unsound speculative ventures, and would exercise a profound influence in placing industrial enterprise on a stronger financial basis.

**IMPERIAL CONTROL OF SOURCES OF ELECTRICAL ENERGY.**

Section V. deals briefly with the above subject. Striking evidence has been submitted of the manner in which German or American control has been secured in existing companies in the British Dominions and Possessions. The committee is impressed with the necessity for legislation, enacting that a company registered in Great Britain or its Dominions should, unless otherwise clearly expressed, be really British, and that no control, direct or indirect, should be exercised otherwise than by British subjects. Companies of foreign origin or under foreign control should be clearly indicated as such. It is suggested that in particular India and the self-governing Dominions should take stock of their facilities for generating electricity, whether from water-power, coal, oil, or other sources of energy, and should appreciate their permanent and ever-increasing importance to the Empire. The Canadian Government has already taken an active part in broad questions of this kind, more especially in connection with the water-power available from the St. Lawrence river.

The committee urges that electrical supply ought to be considered as a matter of Imperial importance upon which other manufacturing trades, all forms of railway traction, munition works, the production of fertilisers and other aids to agriculture will largely depend, and that the Empire's available resources for this purpose should not be allowed to pass into alien hands or under alien control. The same considerations apply to the conservation of natural products and raw materials essential to our electrical manufacturing industries.

**SUMMARY OF RECOMMENDATIONS.**

The committee makes the following recommendations:—

(1) A thorough reform of the legislation and conditions under which the generation and distribution of electricity are promoted and administered in this country which will involve modifications in the relevant Acts and Regulations; and a like reform of the legislation and conditions affecting the promotion, construction, and operation of tramways and light railways.

(2) The prohibition of import of enemy goods for a period of three years after the conclusion of peace, subject to importation under licence in special circumstances after the expiration of the first twelve months.

(3) The imposition of import duties sufficiently high to protect effectively the electrical industry.

(4) The prevention of the sale in the United Kingdom of any imported electrical goods at prices lower than those current in the country of origin.

(5) The recognition of the advantage of combination among manufacturers and official co-operation with such action.

(6) The prevention of any concern engaged in the electrical or allied manufacturing industries, if controlled directly or indirectly by enemy capital, from continuing to trade within the Empire, unless it be specially authorised and its constitution made public, and the passing of legislation requiring that not more than 25 per centum of the capital in any other electrical or allied undertaking shall be held either directly or indirectly by enemy subscribers or their agents.

(7) The treatment as enemy products of all goods produced in foreign countries by concerns controlled by enemy capital or under enemy direction.

(8) The exclusive acceptance of British tenders by State Departments, public bodies and companies supplying electrical energy under statutory powers.

(9) The adoption by Government departments and public authorities, so far as is practicable, of standard types and patterns of plant and apparatus.

(10) The prohibition of transport discriminations operating to the detriment of British manufacturers, and the provision of improved transport and cargo handling facilities.

(11) The promotion of a better understanding between employers and employed and the provision of better housing and working conditions.

(12) The provision of extended banking facilities, preferably by the establishment of industrial banks, to enable British manufacturers to secure and finance contracts and engineering enterprises.

(13) The recognition of the permanent and ever-increasing importance to the Empire of the natural sources of power for the generation of electricity in the British Dominions, and the introduction of safeguards by legislation or otherwise to prevent these national assets from passing into alien hands or under alien control.

Certain further recommendations will be made in a supplementary report dealing *inter alia* with education, research, the decimal system, and the consular service.

**THE REPORT ON ELECTRIC POWER SUPPLY.**

In the House of Commons, on June 13, Mr. Jardine asked the President of the Board of Trade what action he proposed to take on the report of the Committee on Electric Power Supply. Sir Albert Stanley replied that the report was receiving careful consideration. It raised issues of great importance, but no time would be lost in dealing with the matter.

## ECONOMY BONUS FOR L.C.C. CAR CREWS.

Acting on the suggestion of the Tramways (Board of Trade) Committee for the reduction of coal consumption, the London County Council, through the Highways Committee, have agreed, after consultation with the employees, to offer a bonus to motormen and conductors for economy of current on the following terms:—

(1) That the bonus shall be 50 per cent. of the value of the direct saving in fuel due to decreased consumption of electrical energy effected by motormen and conductors.

(2) That the saving (if any) shall be calculated from the number of units measured at the direct current bus-bars in the sub-stations compared with the number of units which would have been taken for the same car mileage at the average number of direct current units a car mile used during 1917-18. The direct-current units a car-mile for the year 1917-18 were 2·27, measured at the bus-bars in the sub-stations.

(3) That the value of the coal shall be calculated from the amount of coal burned per direct-current unit delivered to the track feeders at the sub-station at the average purchase price of fuel free alongside Greenwich power-station pier.

(4) That the value of any units purchased from other authorities shall be calculated at the same quantity and price of coal per direct current unit as if the units had been generated at the Greenwich power-station.

(5) That the bonus (if any) is to be paid to motormen and conductors (male and female) on the basis of the actual number of days worked by each individual employee during the quarter. A day's work to be counted as one day, irrespective of hours worked.

(6) That the bonus be calculated and paid quarterly.

(7) That an employee leaving the service during the quarter shall be paid a bonus based on the number of days worked, at the ascertained figure for the previous quarter.

(8) That the bonus system shall be terminable at any time by three months' notice, either by the Council or the employees.

It is anticipated that if a saving of energy consumption of 10 per cent. could be effected by the drivers, at the present average price of fuel there would be a saving in the cost of coal of about £6,350 a quarter; 50 per cent. of this saving distributed equally to the drivers and conductors would represent a sum of about 12s. 5d. a quarter a head. It has been made clear to the employees that this bonus must not be regarded as part of their wages, and that it does not come within the category of matters within the purview of the Tramways Conciliation Boards. No bonus will be paid unless a saving in fuel is effected, and the Council, whilst realising nearly half of any saving made, will in addition obtain other equally important benefits, e.g., reduced wear and tear in car equipment and plant generally, reduced loading of the cables (many of which are at present overloaded), and a reduction of the peak load at Greenwich generating station and on the sub-stations.

## THE LIGHT RAILWAY COMMISSION.

In a statement circulated by Mr. Bonar Law on June 13, it was announced that the Board of Trade, after careful consideration of the recommendation of the Committee on Retrenchment that the Light Railway Commission should be wound up, had decided, after consultation with the Treasury, to continue the powers of the Commission for the present. The Light Railways Act of 1912 was accordingly included in the Expiring Laws Continuance Act last session. This had been done in view of the difficulty under existing circumstances of forming an opinion as to the best method of dealing in the future with the question of light railways. A small staff of the Commission which remains is employed to a considerable extent on important duties in other departments of the Board of Trade.

# MUNICIPAL AND COUNTY ENGINEERS.

## PAPERS ON TOWN PLANNING, ROAD, AND TRANSPORT QUESTIONS.

The 45th annual general meeting of the Institution of Municipal and County Engineers, held in London on June 20 and 21, proved very successful. Ordinarily the summer meeting is held in the town of which the president-elect is the engineer, and therefore this year's meeting should have taken place in Battersea. Circumstances over which the authorities of that borough had no control made a conference at Battersea impossible, and so, by the exercise of that courtesy which is never wanting amongst Metropolitan Mayors, the Mayor of Battersea was enabled to welcome the delegates at the hall of the Institution of Civil Engineers. The attendance of delegates was above the average, and the visit of the President of the Local Government Board added to the importance of the gathering. Mr. P. H. Palmer, borough engineer of Hastings, as president, took the chair at the annual meeting. The report submitted dealt, amongst other matters, with the question of the status of engineers, and stated that the joint conference of the Society of Engineers and the Institution had prepared a report, which will be submitted to the Local Government Board.

Mr. P. H. PALMER proposed the adoption of the report, and said that he saw no reason why the institution should not attain to as good a position, and be as much recognised, as the Institution of Civil Engineers.

Mr. T. W. A. HAYWARD seconded the motion, which was carried.

After a welcome from the MAYOR OF BATTERSEA, Mr. T. W. A. Hayward, municipal engineer of Battersea, was installed as the new president, and a graceful compliment was paid him when the Mayor presented him with a framed illuminated copy of the resolution of congratulation which had been passed by his Borough Council on his election to the office.

A vote of thanks was accorded Mr. P. H. Palmer, the outgoing president, and then Mr. HAYWARD delivered his presidential address, which dealt generally with the work of the municipal engineer and the need for training. He emphasised the importance of the municipal engineer having fixity of tenure.

The Right Hon. W. HAYES FISHER, President of the Local Government Board, addressing the members at the afternoon session, pointed out the important part that engineers would be called on to play in the reconstruction of the world at the end of the war, and in this connection he dealt with the Government's policy in regard to the building of working class houses. That policy could be helped or hindered by municipal engineers, and he believed they would help. On the subject of the State building, he said if the State did attempt to house the workers they would necessarily have to go to the local authorities on such questions as sewerage, water supply, and transport, and the latter subject was one of especial importance in the proper housing of the masses. In all these things the dominating factor was finance, and no one could say what would be the value of money at the end of the war. The speaker aroused enthusiasm when he declared that this country and its Allies held the keys of the cupboard containing the raw materials of the world, and if they gave those materials to those who had helped to build up instead of destroying, the skill and energy of the people of this country would make Great Britain a more valued and blessed possession.

On the subject of town planning and transport, four papers had been prepared. The first, by Mr. A. HORSBURGH CAMPBELL, dealt with the difficulties encountered under the present Town Planning Act, the author pleading for the complete recission of the existing procedure regulations and the substitution of a shortened code of regulations in harmony with the simplicity and spirit of the Act itself.

Mr. J. W. COCKRILL (borough surveyor, Great Yarmouth) dealt with the subject of "The Official Housing and Town Planning Act, 1909," and asked who was so capable of carrying out the provisions of the Act as the official who was in daily touch with the technical work of his district. At the same time, he agreed that occasions would arise when it would be desirable to call in an expert on some æsthetic or technical subject.

Mr. D. M. JENKINS (borough engineer and surveyor, Neath, in the course of his paper on "Regional Planning," emphasised the need for regional as against piecemeal planning. What was required, as the condition precedent to town planning, was a large scale consideration of the kind of development that best suits a whole group of areas. Such consideration should extend not merely to housing, but also to new and improved road communications, transport facilities, and the provision of central power-stations. The large increase after the war of road transport for short distance traffic was confidently anticipated. Its development would be stimulated largely by the general supply of cheap forms of power; and this again emphasised the necessity for regional planning of and control of roads, and of providing and maintaining a system of well-designed and equipped arterial roads.

### BIRMINGHAM'S NOTABLE TRAMWAYS PROPOSALS.

The paper of Mr. H. E. STILGOE (city engineer, Birmingham) was perhaps the most practical contribution to the debate, inasmuch as he was able to show what has been done at Birmingham in regard to main roads and in respect of town planning schemes carried through. By the extension of its boundaries Birmingham has included a great deal of what is rural country, and provision is to be made for the construction of roads of sufficient width for future needs, and of subsidiary roads and tramways for the development of the districts. The City Council has approved the proposal that 110 ft. shall be fixed as the minimum width of streets of something like a mile from the centre of the city, and 120 ft. as the minimum width onwards to the boundary. At present tramways are laid in practically every one of the arterial roads running towards the centre of the city; these tramways are fed by tramways in other streets, also by motor omnibuses. Whether tramways or omnibuses or some other form of cheap conveyance would be employed in the future they could not say; it was, however, certain that there was nothing likely to be produced which would be cheaper, from the point of view of tractive effort, than a steel wheel on a steel rail. Assuming, then, that the tramway was to remain, it was of great importance that the present cost of maintenance of the track and the rolling stock should be reduced. The average cost of repairs and reconstruction of the tracks in the streets approaching the centre of the city amounted to about £650 per mile per annum, which worked out at about 1s. 6d. per square yard of track surface per annum, which, if capitalised at twenty years' purchase, amounted to 30s. per square yard. It was estimated that about 75 per cent. of this amount would be saved if sleeper track were adopted, and this, together with the saving on the initial cost of construction, should be set against the cost of the extra width of land required to provide for the independent sleeper track. The rigidity of a tramway, as at present constructed in the carriageway, was contributory to its own destruction and to that of the rolling stock. A street tramway, when forming part of the carriageway, must of necessity be rigidly laid, but when constructed on the same principle as a permanent railway, namely, on separate track on an elastic bed such as was furnished by rails laid on sleepers and ballast, the maintenance of the permanent way was reduced to a minimum, and the life of the rolling stock was considerably increased; further, the cost of the original construction was much less.

### OTHER ADVANTAGES OF SLEEPER TRACK.

There would also be a great gain in the matter of speed, as the tramway, being on a track separate from the carriageways, the ordinary vehicular traffic travelling along a road could not get into the way of the cars; the consequent increase of speed would be not only an advantage to the travelling public, but would mean more economical working of the tramways. Another advantage would be the lessening of the noise, as nearly all the noise from cars ordinarily arose from "hammered" rail joints, due to rigid construction of track. An independent track on sleepers would be more elastic. A further advantage was that if in the future it was decided to increase the gauge of the tramways from 3 ft. 6 in. to 4 ft. 8½ in., it could be done upon the separate sleeper track system with comparative ease and low cost upon the width provided in this scheme. Therefore in considering the width of arterial streets, sufficient width for a separate track for the tramway should be provided; the only practicable position for this in a shopping or business street was in the centre; consequently it was necessary to provide a carriageway on either side.

The minimum width required for tramways on sleeper track is 27 ft. for the track and 24 ft. for each of the two carriageways, making together 75 ft. between the footpaths; the footpaths to be 17 ft. 6 in. each, giving a total street width of 110 ft. The 27 ft. of tramway track provides the necessary standing room for passengers; the two footpaths should be not less than 17 ft. 6 in. each, to provide for pedestrian traffic and the laying of service mains. In the portions of the arterial roads more remote from the centre of the city, where land is cheaper, a minimum width of 120 ft. is recommended; the extra 10 ft. provides for trees in the tramway track and on the footpaths. This additional width is the minimum to obtain the object in view. The width of 120 ft. for a suburban arterial road and tramway should be taken as the minimum, and not as the maximum. Provision was made for a central tramway track 33 ft. in width, a carriageway on either side, each 24 ft. in width, and a footpath 19 ft. 6 in. wide (with or without a grass margin and trees) between each carriageway and the forecourt. The minimum width of 27 ft. for the track did not permit of the planting of a hedge or row of trees on either side; where the hedge or trees were planted, 33 ft. is the minimum, and 42 ft. would be better; but if 120 ft. was the total width of the street, then the footpaths would be reduced to 15 ft. each, which was not sufficient in all cases. The large double-deck cars in the city carried from 52 to 60 passengers. At the present time a single-deck car was being experimented with in Birmingham; if the single-deck cars eventually took the place of the double-deck cars a greater number of cars would be necessary to deal with the traffic. On the other hand, assuming that motor omnibuses or some such vehicles

Digitized by Google

were to supersede cars, it was obvious that a greater number of vehicles would be required; the double-deck omnibuses carry about 34 and single-deck omnibuses about 25 passengers. There would appear to be a general tendency to build smaller omnibuses rather than larger, and this again meant more vehicles. The point for consideration was the number of vehicles and the carrying capacity. If tramways were constructed as at present in Birmingham—as a part of the carriageway of the street—it was certain that the number of cars would increase, and therefore adequate space must be provided in the arterial streets for other vehicular traffic.

A number of speakers took part in the discussion, but their remarks were almost entirely confined to the questions of procedure under the Act and the regulations.

### Road Maintenance after the War.

The road problem was the feature of the papers and debates at the concluding sitting.

Sir George Gibb, chairman of the Road Board, attended, and had a cordial welcome. He said the nationalisation of roads would merely mean the substitution of one form of local government for another. The State, in taking the control of roads out of the hands of the local authorities, would have to shoulder the whole of the cost—a disastrous policy for which no sound reasons could be advanced. There would, of course, be certain advantages associated with the standardisation of roads, but he was convinced that this result would be best achieved by maintaining the existing system of local control of roads. Co-ordination was preferable to Government control. To get good roads there must be good surveyors, and to get good surveyors authorities would have to pay good salaries. There was bound to be a heavy expenditure on roads after the war. That was why he advocated the policy of saving money, so that funds would be available later. The Road Board had saved money, but there was not enough available to do all that would be desirable. The war had had a bad effect on roads through excessive traffic, but on the other hand there had been a diminution of certain kinds of traffic which to an extent compensated for the increased military traffic. But he had been surprised to find how good was the state of many roads which had been subjected to heavy traffic. Though there had been an intense growth of military traffic on some roads, yet had there been no war there would have been a general increase of traffic. Sir George declared that a progressive people would have good roads, and many of them adapted to the needs of each locality, and they would not be particular about uniformity of pattern. The splendid road system of this country was the creation of local enterprise, and to that it owed its variety and its adaptation to the circumstances and needs of each locality. The general conception of their system of highway administration was a sound one, but modern developments had created an imperative need to make some changes, and to find the best ways of meeting new requirements. There would in the future be a great expansion of motor traffic, and roads must be made fit to carry the new traffic. This was a problem which presented no great difficulty, except that of increased cost. The first step towards reform was to get a proper classification of roads. The Road Board was engaged in settling such a classification when the war broke out. All roads of the metropolitan area would be classified as first, second, or third class, according to the importance of each section or a unit in a complete system of road communication. In conclusion, Sir George insisted that the Government should give greater help to local authorities towards the maintenance of main roads.

Mr. Brodie (city engineer, Liverpool) said the roads of this country prior to the war were admitted to be the best in the world. They would have to carefully examine any proposals for changes of policy. Central control was in the air, but experience had not convinced them that central control was a first-class thing. Possibly there might be a solution in a combination of central and local control.

Mr. Brownridge agreed that co-ordination would be desirable. Good roads were of vital importance to the country. There was need for supplementing local efforts. Indeed, a national effort was needed in the direction of improving and making main roads. Surveyors were looking to the Road Board for aid after the war when roads would have to be dealt with. Meanwhile local authorities should be preparing.

The President (Mr. Hayward) recalled that Sir George Gibbs was criticised when he was appointed, but experience had proved him to be the right man to be the chairman of the Road Board.

Mr. Greaves (Sutton) said the day of the waterbound road was over. On main roads there should be culverts for mains, to prevent the frequent breaking up of the roadway by gas and water companies.

Mr. Brodie, interposing on this subject, urged that money spent on waterbound roads would be more wisely spent on permanent roads.

Mr. Stilgoe (Birmingham), alluding to clinker mexphalte roads, said that one he had constructed a year ago was wearing well, though its construction was costly, owing to war conditions. He agreed that waterbound macadam should be reduced to a minimum.

Mr. Price declared that it was possible to make tar macadam roads equal to asphalte roads if proper care were taken in the construction.

Mr. Cockrill said waterbound macadam was the dearest method of construction. Tar went a long way to economy in road maintenance.

Mr. Dryland (Surrey) urged surveyors to keep records of their roads in order to compare and test experiments and experiences.

Mr. Bainbridge said the ordinary waterbound road was out of date, though it might be useful where there was no traffic.

Captain Frank (Durham) said authorities needed power to acquire land with greater facility for road widening.

Mr. Roberts (Worthing) urged surveyors to make greater use of tarred clinker. After thirteen years' experience Worthing was still making tar-clinker roads.

Mr. Gedding (Worcestershire) said concrete was necessary for heavy traffic, though its cost at the moment was prohibitive. Consolidated slag, however, had proved equal to concrete when properly laid.

Mr. Harwood spoke of the need of local traffic statistics, so that reliable road wearing comparisons could be made.

### Lorry Speed—Four-Wheel Drive Less Destructive.

Major Phipps said he was surprised, on returning from France, at the speed which lorries travelled over the roads in this country. The limit in France was eight miles an hour, but here it was about sixteen, and it should be reduced, because high speed caused great damage to the roads. The authorities did not realise this fact sufficiently. In France he observed that the four-wheel drive vehicles did less damage to roads than the two-wheel drive vehicles. The opinion of engineers in France is that in the future there would be such heavy motor traffic in this country that some form of granite sett paving would be necessary.

The President mentioned that in Battersea there were tar-macadam roads now as good as when the roads were made fourteen years ago. The roads, of course, had had to be looked after. As regarded clinker, it had to be remembered that clinker varied in different districts, and was not in all places suitable.

Dealing with the growth of London, Mr. W. R. Davidge said that in the reign of William and Mary the London householder was required to have the street in front of his house swept twice a week under a penalty of ten shillings, and to do his share of street lighting by hanging out a lantern. The great era of road improvement came about in the middle of the eighteenth century, when the turnpike roads were created. The general Turnpike Act of the eighteenth century even insisted on roads at least 60 ft. wide. London was seven times bigger than it was a century ago, and was spread over an area seventy times bigger.

Mr. A. Dryland (Surrey), in some notes on traffic and roads, gave a hint of the future in the way of road traffic. He thought it might be taken as certain that heavy haulage of all types would develop rapidly. The shortage of horses had turned everybody's thoughts to substituting mechanical haulage, and this had been done to a great extent even during the war. What with the thousands of lorries returning from army service, which would come largely into use in aiding the "arts of peace" instead of war, the waiting lists all manufacturers of heavy vehicles had, and the immense enlargement of output of this type of vehicle developed during the war, the number of the heavy haulage vehicles to be provided for would go up by leaps and bounds. The railways would be in such a state of deterioration, and have such a shortage of rolling stock, that it would take some years to restore them to their pre-war condition, and this would enhance the demand for road traffic. It certainly looked as if municipal engineers were up against a tough task. The deteriorated road crusts, which would take some years to restore even to their former sound condition, would be tried as they had never been before, and by the most damaging factor among road destroying vehicles. There was no doubt that heavy motor vehicles were the most damaging of any on our roads to-day. The effect of the omnibus had demonstrated what a trying form of traffic it was, and most of the additional traffic would be of a heavier type than these, and would probably attain greater average speeds because of the lesser number of stoppages. It was a common experience on country roads to find vehicles of over 5 tons weight unladen, and with perhaps a load of another 5 tons, travelling at speeds exceeding 20 miles per hour, and the effect of this speed and weight combined needed no emphasising.

### Need for Larger Wheel Diameter.

He expressed the view that regularity in the diameter of wheels was a strong factor in stereotyping corrugations. If there had been a greater variety in wheel diameter, and particularly a good proportion of those of a larger diameter, their troubles, past and future, would be less. The exigencies of the roughness of the track might yet drive the motor industry to adopt a larger wheel diameter, as smoothness of travel was a prime factor in economical maintenance of vehicles. Dealing with another feature of the growth of heavy haulage, Mr. Dryland said he was impressed with the tendency of the heavy vehicle to keep well to the side of the road, a tendency

Digitized by Google

to be encouraged, but bringing with it an additional strain on what was, in the country, almost invariably the weaker part of the road. The slight tilt of the vehicle, from the necessity of the road camber, put further weight on the extremities of the road width, and he strain where there was least counteracting support. It would be necessary to strengthen the haunches by kerbing, which meant a large expenditure hitherto deemed unnecessary for country roads.

In some points on road construction, Mr. G. GREEN (Wolverhampton) alluded to the virtues of clinker for road construction.

War's effects on traffic were described by Mr. E. P. HOOLEY (Oxford), who said that the taking away of 75 per cent. of the available steam rollers, traction engines, self-propelled tractors to another sphere of usefulness, in great measure returned the surveyors to the days of the Victorian era. The difficulty of obtaining road material equally returned them to the days when each member of the old Highway Board begrudged the necessary material for efficient management because " the roads were good enough for farm traffic," and to those " wise men " " farm traffic " seemed nearly all that the roads were ever intended or likely to carry ! It could hardly nowadays be appreciated that in 1881 steam rollers were looked upon by very many as the expensive toy of the amateur road-maker, or the fool's paradise tool of the enthusiastic reformer. Undoubtedly, he insisted, self-propelled traffic was yet in its infancy, and the advent of cheaper cars for light use and the great advantages of heavy and light tractor traffic for business purposes would call for permanent roads or greatly increased cost of present roads.

Mr. J. D. WEBB dealt with roads in rural areas, and referred to the damage by farm wagons. He declared that the condition of the traffic now using the highways necessitated altered methods of construction and maintenance of road surfaces, as many of the highways in rural areas were subjected to both heavy and fast moving traffic, motor omnibuses, etc. Both heavy motor lorries and fast-moving vehicles seriously affected the road surface, by disintegration and corrugation, particularly by improperly balanced vehicles, method of construction, position of the springs, type of tires, excess weights, width of wheels, and various other factors. Many of these effects could be minimised in an improved construction of vehicles, but this no doubt would be an accomplished fact in the near future. It would appear almost incredible that some roads in rural districts were subjected to traffic exceeding 500 tons per yard superficial in twenty-four hours, figures confirmed by census of traffic recently taken.

Mr. GLADWELL (Norfolk) declared timber haulage to cause more damage to road surfaces than any other form of traffic.

## BUILDING UP WORN RAILS.

ONE OF SEVERAL NEW SOUTH WALES DISCOVERIES.

The Chief Commissioner of the New South Wales Government Railways and Tramways has reported upon the experiments conducted by a special committee appointed shortly after the outbreak of war, with a view to discovering a method of producing manufactured accessories locally for the construction of rolling stock.

The discoveries of the committee comprise a locomotive superheater equal to any produced in any part of the world ; steel railway axles superior to Krupp's ; steel railway tires which have demonstrated by actual test satisfactory life ; a new type of Australian boiler plate ; the utilisation of a substitute for tin ; and the invention of a method of building up worn tramway rails and crossings, so as to make them again useful several times. Accessories for rolling stock construction have been imported by the Railway Department of New South Wales in common with the Railway Departments of other States. For years the expenditure on steel axles, tires, and boiler plates alone have reached millions of pounds sterling, all of which money has been going out of the country, and the bulk of it to Krupp's, in Germany.

Tests have shown also that the tires, axles, and wheels made from Australian steel at Everleigh are in every way superior to the Krupp products, and the cost is a great deal lower.

**Thermit, Limited,** 675, Commercial Road, London E., inform us that the whole of the company's shares which, in August, 1916, were sold by the Public Trustee to the Birmingham Metal and Munitions Company, Limited, have now been taken over by Nobel's Explosives Company, Limited, Glasgow, and under the new auspices the activities of Thermit, Limited, are being considerably extended. The company own many valuable patents connected with the engineering industry, and by their scientific application are enabled to execute certain classes of work by methods other than those usually adopted. The company have a highly trained staff of chemists, engineers, and workmen, and are specialising in the manufacture of high-grade metals and alloys in connection with munitions ; also welding in all its branches by up-to-date methods, and engineering repairs generally. In principle the Thermit reaction is no doubt familiar to our readers, but the success of the process demands a good deal of practical experience based on scientific knowledge. The company is now wholly British, to the entire elimination of all enemy interests.

## PERNAMBUCO TRAMWAYS COMPANY.

DIVIDEND-PAYING STAGE REACHED.

The sixth ordinary general meeting of the Pernambuco Tramways and Power Company, Limited, was held on June 25 in River Plate House, London, E.C., Mr. William Higgins in the chair.

The Secretary (Mr. H. Tattam) having read the notice convening the meeting, and also the report by the auditors,

The Chairman, referring to the absence of Mr. Follett Holt (chairman of the company), said that this was due to Mr. Holt having been asked by the Government to form part of an important diplomatic and commercial mission which recently left these shores for South America. The shareholders would agree with him that Mr. Holt could not refuse this opportunity of assisting his country. The directors felt that his services would prove of value to the Empire.

Moving the adoption of the report and accounts, the chairman said that the incorporation took place on January 24, 1913, and their construction programme was proceeding rapidly when war broke out in August, 1914. Since then their efforts towards completion of the original programme had been retarded, and the period from the outbreak of war had been one of considerable anxiety. Notwithstanding these troubles and difficulties, however, the confidence of the directorate in the ultimate success of the undertaking was slowly but surely being confirmed. The past year had been one of continued progress and development in every branch, and had it not been for the existing abnormal conditions, dividends might have been earned on both classes of the share capital. Nevertheless they were glad to be able to recommend a payment that would commence the dividend-earning period in their history. The operating results showed a net increase over those of the previous year of £27,127, and this result would have been considerably increased had it not been for the extraordinary rise in the price of practically every item required in the successful working of such a company.

The tramways receipts had shown, and continued to show, a progressive rate of increase. The whole of the systems of the old mule tramways and the Brazilian Street Railway had now been electrified, and an electric tramway connection had been established with the important suburb of Olinda. They remained with just over eight miles of steam lines, being part of what used to be the Olinda Street Railway. Notwithstanding the enormous rise in the price of coal, the gas undertaking had shown a profit. The improved plant laid down in the retort-house had enabled the management to make great economies in the amount of coal carbonised. At present they were carbonising some 3,750 tons per annum, a saving of about 50 per cent. of coal. In ordinary times coal would have cost £2 per ton. The price last year was £5 15s. and at present it was £8. Bearing these figures in mind, it was evident that the directors were justified in anticipating a remunerative future for this branch of the business when the war was over and circumstances and prices again became normal. The new gasholder enabled them to provide customers with the steady pressure so much needed, and had aided materially in building up the business by the sale of gas for heating and industrial purposes.

With regard to the supply of current for lighting and power, the chairman last year anticipated that during 1918 they would see some good results from this branch. The directors still hoped that this anticipation would be realised, but they met with the greatest difficulties in obtaining the material to carry on the work, and, even when they had obtained it, great delays had arisen in getting shipping permits. At present all endeavours were being made to supply their requirements as speedily as possible, and once the material arrived the process of erection would be speedy. There was a great demand for electric current in Pernambuco, and as soon as they were in a position to supply their customers good and improving results could be anticipated. The Telephone Company continued to show satisfactory progress, and the result of the better service had shown itself in the increased number of subscribers, and consequently in the improved receipts. It was also satisfactory to report that they had enjoyed during the year a better rate of exchange, averaging 12·81d., as against 12·06d. in 1916. With regard to the future, the prospects were satisfactory. Since the commencement of the year there had been every week an increase in the traffic receipts from the tramways, the total increase to date being approximately £22,000. The net results of working, so far as the directors knew them, also showed a distinct improvement compared with the corresponding period of 1917, and they had no reason to suppose that progress would not continue as the business developed. The city of Pernambuco was being brought up to date under the supervision of its progressive and go-ahead Government. For many years it jogged along with its more or less primitive methods of transit and with what could only be termed antiquated gas lighting facilities. To-day all this was changed. This company had supplied a modern system of tramways and up-to-date gas installations, and they hoped in the near future to be able to provide the current for electric lighting and power. It was satisfactory to know that their endeavours to meet the public were appreciated.

Mr. H. K. Heyland seconded the motion, which was carried, and a dividend of 3½ per cent., less income-tax, was declared on the 7 per cent. cumulative participating preference shares.

Digitized by Google

## SIEMENS BROTHERS AND COMPANY, LIMITED.

### An All-British Concern.

The ordinary general meeting of Siemens Brothers and Company Limited was held on Tuesday, June 11, at Winchester House, Old Broad Street, E.C., Mr. G. Mure Ritchie, the chairman, presiding.

The Chairman said that during the past year the company had adhered to its past policy, and the volume of the business done exceeded that of 1916 by about one-third. The expansion in output occurred principally in insulated wires and cables, ebonite, and batteries. In regard to the development of automatic telephony, which the company foresaw before the war, the advantages of eliminating the human exchange operator had been demonstrated in practice, and all technical difficulties surmounted, and they were equipped to provide large exchanges for public service and also private exchanges of 25 to 500 lines. Notwistanding the demands of war work, they had completed a semi-automatic exchange of 1,000 lines at Port Adelaide for the Commonwealth of Australia, and a full automatic exchange of 1,300 lines at Grimsby for the G.P.O., while good progress has been made with a full automatic exchange of 950 lines for Stockport, also for the G.P.O. Many private exchanges had been established in munitions factories, and had given every satisfaction.

### Substantial Increase of Profit.

After speaking of the cordial relations existing between the company and the workpeople, the chairman went on to say that the year's profit of £208,524 showed substantial increase over that of 1916, due to the very much larger volume of business done. An interim dividend of 10 per cent., free of income-tax, had been paid, but no further distribution for the year 1917 could be considered until the Government claim for excess profits duty had been adjusted.

The balance sheet showed £764,524 for materials, manufactured goods, and work in hand. This was more than double the pre-war amount of £377,385, the increase being due entirely to the growth of expenditure on orders in hand, which at December 31 exceeded in value £1,500,000.

An important asset was the holding of the entire issued capital of Siemens Brothers' Dynamo Works, Limited, namely, £200,000 in shares and £200,000 in debentures. At the outbreak of war the share capital of Siemens Brothers and Company, Limited, was £600,000, with £150,000 of 4 per cent. debentures, nearly all the shares and about one-third of the debentures being held by Germans. Moreover, the German shareholders had supplied funds to meet the capital requirements of the growing businesses of the two companies. When war began the entire German interest in the shares and the additional capital referred to was vested in the Public Trustee, who took steps to realise it by sale to a British buyer, and on December 14, 1917, the share capital of Siemens Brothers and Company, was purchased by Messrs. C. B. Crisp and Company. The contract provided for the issue to the Public Trustee by the company of £1,330,000 of 4½ per cent. debentures to provide for the repayment of capital (other than share capital), and the participation in the 4 per cent. debentures employed in the business by the former German owners; and the Public Trustee had a right after the conclusion of peace to call for the redemption of these debentures on one year's notice. Subject to such arrangement, they were redeemable by annual drawings calculated to extinguish the whole in twenty-five years from the date of issue.

### Board Reconstituted.

Following this arrangement with the Public Trustee, the Board was reconstituted, and now consisted of Mr. G. Mure Ritchie (chairman), Sir William Bull, M.P., Sir Clifford Cory, M.P., Lord Queenborough, Mr. H. J. Thomas, and Mr. G. Chauvin (managing director). The new board had devoted attention to many questions concerned with the development of Siemens Brothers into a great national manufacturing asset, leaving little time for discussion of a scheme of rearrangement of the share capital. The board, however, recognised the advisability of changing the capital arrangements so as to establish equilibrium between share capital and debenture debt, and at an early date the shareholders might be asked to approve a scheme for increasing the share capital to £1,500,000 (or even more) in £1 shares, of which a substantial portion would remain in reserve for future developments; but as to £400,000, if issued for cash, the proceeds would be available for the retirement of a corresponding amount of debentures. If the matter were carried through on the lines thus indicated, the joint concerns—Siemens Brothers and Company and Siemens' Dynamo Works—would be represented by an issued share capital of £1,000,000, with £150,000 of 4 per cent. debentures and about £1,000,000 of 4½ per cent. debentures, the latter being held by the Public Trustee. These readjustments were all subject to the consent of the authorities concerned, but he could go so far as to say that, as the Board of Trade wished the company to be so assisted as to ensure its future expansion in British hands, they were justified in believing that symapthetic consideration would be given by the authorities to their proposals for the financial reconstruction of the company when they were put forward.

### War Loan Purchase.

Dealing with Siemens Brothers' Dynamo Works, Limited, entirely owned by Siemens Brothers and Company, the chairman said that the turnover in 1917 increased in the United Kingdom and decreased overseas as compared with 1916. The value of unexecuted orders on December 31 was £1,145,000. Siemens Brothers and Company and the Dynamo Works had purchased £50,000 of War Loan, and had provided several thousands of pounds to give temporary assistance to War Savings Associations for the workpeople.

Since the entry of the new directors into office, negotiations had been inaugurated with other companies doing similar industrial business with the object of bringing such manufacturers together for the reduction of unnecessary competition, and the avoidance of duplicating machinery, workshops, and offices. Co-operation would make for the more continuous running of plants, with the attendant advantages of cheaper production, increased efficiency, and improved quality of the work done, avoiding unnecessary expense in storage, selling organisations, and reducing the duplication of stocks to a minimum. An even more important advantage aimed at was the amalgamation of designing offices and interchange of experience, designs, and methods, to the promotion of economy and efficiency. Such industrial alliance would, moreover, make it possible to carry out complete installations within the allied group. An alliance of this nature had already been arranged with Messrs. Dick, Kerr and Company, Limited, in the field of dynamo installations in all its ramifications, and other alliances were contemplated. He moved the adoption of the report and accounts, and the motion was unanimously carried.

A vote of thanks to the chairman concluded the proceedings.

## BRITISH ELECTRIC TRACTION COMPANY.

The report for the year ended March 31 shows a gross profit of £237,906, against £226,745. After deducting general expenses and amount written off sundry assets, £28,685, there remains £209,221; £97,598 was brought forward, making £306,819. Debenture interest absorbed £90,979, leaving £215,841. The directors recommend a dividend of 6 per cent. for the year on the cumulative participating preference stock (on account of which £21,382 has already been paid), a dividend of 3 per cent. for the year on the ordinary stock, to place to reserve £21,172, and to carry forward £112,116. The net profit shows an increase of £9,249. The aggregate receipts of the associated companies show an advance, but the wages paid and the cost of materials have also increased, and larger provisions have been made for future repairs and maintenance. In the Metropolitan area war conditions generally have had a prejudicial effect. The question of increasing the statutory fares on tramways and light railways was under the consideration of a Select Committee of the House of Commons. The amount standing to the credit of reserve account at March 31, 1917, was £425,000, to which has been added £3,828 in respect of debenture stocks purchased and cancelled. With the proposed allocation of £21,172, the reserve will then amount to £450,000. Investments now stand at £4,262,958, and yielded a revenue of £210,361, representing an average of 4·93 per cent. on the amount at which they appear in the balance sheet, against 4·79 per cent. At March 31 there were uncalled liabilities on investments amounting to £42,901.

Mr. E. Garcke presided at the twenty-second annual meeting, held on June 26, at the Manchester Hotel, E.C. In moving the adoption of the report, the chairman said that the position presented the same general features as it did last year, but they were intensified. They had made more profit, because they had done more work, and having done more work they had had greater difficulties to overcome. The increased profits made by the associated companies had been applied mainly to strengthen the financial position. Referring to the report of the Board of Trade Electrical Trades Committee in regard to the position of the electrical trades after the war, to the report of the Coal Conservation Sub-Committee of the Ministry of Reconstruction on electrical power supply, and to the report of the committee appointed by the Board of Trade to consider the question of electrical power supply, the chairman said that they deserved careful attention by all who had invested capital in the industry. The three reports were a condemnation of the electrical legislation of the last thirty-six years and a vindication of the men who had persistently opposed this legislation and its tendencies. The condition of the electric industry before the war was ludicrous, for it was lamentable to contemplate the many years of effort spent in surmounting unnecessary obstacles. The general result was expressed in sparse profits, which meant low wages, inability to make research and unwillingness to undertake extensions. German manufacturers, who had a protected home market because they were encouraged by their Government, were able to compete in this country, and they were invited to do so by our municipalities. The conditions were bad for the manufacturer, but much worse for tramway and electric supply undertakings, which were surrounded by Acts subjecting them to the municipal veto. They were now told that cheapness had not been an unmixed blessing, and that trade combinations were not an unmitigated evil. The explanation

Digitized by Google

was that in the past politics had determined policies, while during the war urgency and efficiency had dispensed with the normal forms of legislation and procedure. The prevailing feeling now was that restrictions must be removed; that facilities for new enterprise and for extensions must be provided; that competition, and especially enemy competition, must be excluded, and that capital invested in the industry must be allowed to fructify, so that labour could be adequately paid; that inventors might be encouraged, and that the highest technical talent might be attracted to the production of electrical machinery and distribution of energy. If the problem was tackled in a comprehensive and equitable manner after the war was over, the electrical industry would prosper to an extent and in ways that would surprise many of its supporters. Sir E. Ollivant seconded the resolution, which was agreed to.

## ANGLO-ARGENTINE TRAMWAYS.

At the 34th ordinary general meeting of the Anglo-Argentine Tramways Company, held on July 1 at Winchester House, E.C., Mr. W. F. Hamilton presided in the absence of the chairman of the company, Mr. J. B. Concanon, through illness.

The Secretary (Mr. W. D. Dawes) read the notice convening the meeting and the report of the auditors.

The Chairman said that the manager, in forecasting the results for the year 1917, stated that if they maintained the traffics of the year 1916 it was about as much as they could expect. It was therefore satisfactory to note that the traffic receipts, which were £2,652,468 in 1916, were in the year under review £2,700,244, and this in spite of the serious labour troubles which took place. Hitherto they had expected increases in traffics to arise from the natural growth of the population of the city, which in pre-war times was nearly 70,000 inhabitants annually, and it was therefore satisfactory to know that now, although the population was stationary, or inclined to decrease, they had added to the receipts £47,776.

Subway's Popularity—Paving and Renewals.

As regards the subway line, during the last five months of the year the receipts showed an increase. This line had become a favourite means of transport; rents were high in its neighbourhood, and any vacant houses were rapidly snapped up. The most careful attention had been paid to the upkeep of overhead lines, permanent way, and rolling stock; £248,754 having been spent during the year on maintenance. Important economies had been made, especially in the construction of track, and the good condition of the rolling stock was shown by fewer breakdowns and consequent delays. The company's properties had been maintained in a good state of repair. The auditors had drawn attention to the amounts set aside as reserves for paving and renewals, to which no material addition had been made since the commencement of the war. In 1914 a scheme for making the necessary provision for paving was settled with the approbation of the auditors, and had since been adhered to. It was true there had been since the year 1913 an addition of only £12,000 to the renewals reserve, but so long as the company was spending out of revenue large sums annually for the maintenance of the property in good condition, the board did not feel justified in these difficult times in adding more to these reserves than the technical advisers considered absolutely necessary. In not recommending any payment of dividend on the first preference shares for the second half-year, the directors had had regard to the cost and the difficulty of obtaining fuel.

Fuel and Taxation—Relations with Employees.

But for the war coal would have been about 30s. per ton delivered in Buenos Aires. The cost has risen to over £8 per ton. Under the power contract the charge for electric energy increased with the price of fuel when it exceeded about 30s. a ton. The price per unit had thus increased by nearly 200 per cent. At pre-war prices for the current consumed in 1917 they would have had an additional sum of £319,000 for distribution in dividends, and this would have paid not only the balance of the dividend on the first preference shares for the second half of the year, but also the whole of the second preference dividend and a small dividend on ordinary shares. To guard against a further increase in the cost of current the Board have carried forward the balance of £17,021, making, together with the £50,969 brought forward from 1916, a total carry forward of £67,990. During the war increasing income-tax had combined with decreasing profits. Companies were assessed on the average of profits for the three preceding years, but they had protected their interests by availing themselves of Section 13 of the Finance Act, 1914, in order to substitute for the three years on which the average is cacluated 1915-1917, instead of 1914-1916, by which we have saved £18,000. While during last year strikes were almost general throughout the Argentine Republic, they were, so far as he knew, the only traction company where satisfactory relations between the company and its employees continued without a break. They had always adopted the policy of paying their men adequate wages, and, what was perhaps quite as important, taking an interest in their individual welfare. The year 1917 had thoroughly tested this policy.

The Chairman gave some interesting particulars of the welfare work among the employees. One branch was the Sanford Home of Rest for consumptive children, which, mainly through the donation of £4,400 from the directors' colleague, Mr. C. H. Sanford, they were able to purchase. It consisted of a large building on the River Plate, with grounds of 12 acres, fields, gardens, and shady trees. It had been such a great success that it was decided to allow the manager to make alterations and additions at the company's expense so that the benefits might be largely extended. Their attitude had created a very favourable impression in official circles and among the public generally. The manager in his report stated there were signs of improvement in business all round, and that they were likely to feel the effect of this improved state of affairs on the traffics, and his opinion in this respect had been justified by the increases in the receipts, which up to date showed £93,538 in excess of the same period of last year. He moved:—"That the report and accounts for 1917, as now presented to the meeting, be received and adopted."

Mr. H. F. Gunning seconded the motion, which was agreed to.

The retiring directors, Mr. J. B. Concanon, Mr. J. Heaton, Baron L. Janssen, and Mr. C. H. Sanford, and the auditors, Messrs. Deloitte Plender Griffiths and Company, and Messrs. James and Edwards, were re-elected. Votes of thanks were accorded to the chairman, directors, the local committee, the general manager, and the staff at home and abroad.

## DAMAGES FOR PERSONAL INJURIES.

Appeal in the House of Lords.

It is certainly unusual for a law case on a question of damages for personal injuries by a tramway accident to be appealed to the House of Lords for final decision. An example has, however, been given in the case of Taylor *v.* Dumbarton Burgh and County Tramways Company. The action was brought in the Court of Session, Edinburgh, by Stewart Taylor, as administrator in law for his son James Taylor, 2 years of age. The child was playing on the road in Old Kilpatrick, on January 27, 1916, when a repairing car belonging to the defenders, which had been standing while a pole repair was being executed, was started, and the boy lost two fingers of his right hand. Lord Anderson, as Lord Ordinary, awarded damages of £150 against the tramway company. The Second Division, on appeal, found that the pursuer had failed to establish fault on the part of the company's servants, and reversed the Lord Ordinary's judgment, but it was unanimously restored by the House of Lords on April 26.

The Lord Chancellor, in moving that the appeal should be allowed, said that the repairing car had been at a standstill in order to effect repairs on a standard, and children had gathered round to watch the proceedings. From the evidence it appeared that all the children, with one exception, were on the north side, and when the car was about to start the conductor warned the children there. He did not look on the other side of the car, and the child Taylor there was seen by no one. His hand was run over. As the south side had not been looked to it was not unreasonable for Lord Anderson to come to the conclusion that there was actionable negligence on the part of the defenders' servant. Each case of this kind must be judged on its own circumstances. The only principle of law in this case was that where there were children about the man in charge of the car should look and see if there were children in danger. Even granting that there was contributory negligence in allowing a young child to be in the street without sufficient guardianship, that did not prevent the right to recover if it was found that the whole cause of the accident was want of care on the part of those in charge of the car. In order to bar an action the contributory negligence must be in the transaction itself, and not in an antecedentary cause.

Viscount Haldane, Lord Shaw, and Lord Parmoor concurred. Lord Shaw also criticised the action of the Second Division of the Court of Sessions in not allowing the case to be tried before a jury. Nobody could contend that amendment of the law, however justifiable, or any encroachment upon constitutional right, could be argued pro and contra in a law court or in any other place than the Legislature, with a view to the repeal or modification of the law. The consequences in the present case had been deplorable. Their Lordships had now a case before them which might have been concluded by the simple verdict of a jury, but it had been made the subject of appeal, and they were now trying a case which, for aught yet seen on the merits of it, should never otherwise have been disposed of than conclusively and finally by a verdict of a jury. The expense to both parties was a deplorable incident, and it was one of the consequences of having varied the procedure, which, so far as they had been instructed, had not been justified by any legal element in the case.

**Goods Traffic on Scottish Tramways.**—Scottish tramway authorities are considering the suggestion of the Road Transport Board that tramway cars should be used for the carrying of goods and parcels. The idea of the Board is that by goods traffic on tramways a saving of horse haulage and petrol can be secured, and tramway authorities have been asked to prepare a return, showing what could be done by day or night.

## LONDON TRAMWAY ESTIMATES.

At a meeting of the London County Council on July 2, the Highways Committee submitted the revised estimates of revenue and expenditure for the year ending March 31, 1919 :—

| | | |
|---|---|---|
| Total receipts ... ... ... ... ... | | £3,321,750 |
| Total working expenses* ... ... ... | | 2,593,140 |
| Surplus on working ... ... ... ... | | £728,610 |
| Interest on bank balances, rents, etc.... ... | | 23,279 |
| Total working surplus ... ... ... ... | | £751,889 |
| Charges against working surplus :— | | |
| Debt charges, including £430,458 for repayment of capital and £264,747 for interest on capital | £695,205 | |
| Income-tax (less tax deducted and retained from interest paid), expenditure on surplus property, and sundry items ... ... | 44,569 | |
| | | 739,774 |
| Estimated net surplus (to be transferred to the renewals fund) ... ... ... ... | | £12,115 |

* Including war service allowances and £50,000 provision for contingencies.

The revised estimates are based on the assumption that the car-mileage during the year will be 50,000,000. This estimate of mileage depends on (i.) maintenance of the necessary supply of power; (ii.) the necessary repairs to cars being effected; and (iii.) the necessary number of operatives being available.

### How Coal Economy has been Effected.

With regard to (i.) the committee remark that tramway undertakings have been called upon to reduce their consumption of coal by at least 15 per cent. The possibility of economy in coal has for a long time past engaged the committee's closest attention, and methods adopted for coal economy at the power-station, including the partial substitution of coke locally produced, have secured compliance with the immediate Government requirements without reducing the tramway services, which are at present limited to the public needs. As a further means of economising coal, the Highways Committee propose to grant a bonus to motormen and conductors for power saved in operating their cars. With regard to the supply of materials for repairs, great difficulties and delay have been experienced, but owing to the responsibilities of the Tramways (Board of Trade) Committee towards tramways essential to the prosecution of the war, a better basis has been established for obtaining materials, and it is hoped that there will be less difficulty in future. The committee is advised that the immediate prospects with regard to staff requirenemts are far from satisfactory, owing to the operation of the Military Service Acts, and the maintenance of an adequate staff is a very serious problem.

The fare revision was applied south of the Thames as from May 18, and certain changes took effect on the lines north of the Thames on June 8, but owing to arrangements with other undertakings concerned in through running services, a complete fare revision was not effected until June 24. The general manager anticipates that the increased revenue from the proposed fare changes might be expected to meet the deficiency balance of £205,290, which was anticipated if the old fares had been maintained, and the cost of urgent renewals (£125,000) during the year. The revised estimates show that not more than £12,115 will be available out of revenue for the year for the renewals fund.

### Question of Further Fare Revision.

The committee view with anxiety the constant and rapid growth of operating expenses, and the prospect of such a small appropriation out of revenue toward the cost of renewals, and they have given careful consideration to the question whether further steps should not be taken immediately by again increasing fares to improve the revenue. They consider that the effects of the recent fare revision must be carefully observed over a longer period to enable an opinion to be formed as to the prospects for the remainder of the year.

It is estimated that the passenger receipts will average 15·62d. per car-mile on the estimated mileage of 50,000,000. The revised estimated receipts for 1917-18 were 13·82d. (Actual receipts for 1916-17, 12·01d., 1913-14, 8·94d.) Working expenses, excluding the special charges and war service allowances, are estimated at 11·2d. per car-mile. (Actual expenses for 1916-17, 8·22d.; 1913-14, 6·47d.) The great growth in working expenses is due mainly to advances in war wages and the increase in the price of materials. The estimates contain a provision of £204,000 for the payment of allowances to officers and employees on war service. In 1917-18 the amount provided for this purpose was £114,300.

The total rates payable in 1918-19 are estimated at £109,940. The renewals fund at March 31, 1918, stood at £279,787. The cost of renewals of special track work, rails, tees, etc., during the current year is estimated at £125,000. The balance in the fund at March 31, 1919, on the basis of the estimates now submitted, is £102,592. The balance of the general reserve fund, calculating investments at cost price, is estimated to amount to £47,817 on March 31, 1919. It is estimated that the net debt, which on March 31, 1914, stood at £9,923,528, will be reduced by March 31, 1919, to about £8,390,000.

### London Traffic Control.

In the course of a discussion on fares Mr. A. H. Scott, vice-chairman of the Tramway Committee, said that the object of recent fare revisions was to simplify the system. Under present circumstances it was almost impossible for the Highways Committee to put forward any intelligent system for the coming year; although they had budgetted for 50,000,000 car-miles they did not know whether Government would allow them to be run.

Mr. Hume said that he would welcome any inquiry by the Finance Committee into prospective capital expenditure. The whole facts would be laid before the Council shortly in a comprehensive report.

Mr. Hume said he was sure that at the proper time the Council would be able to speak with a united voice on the question of traffic control. It was a big question as between omnibuses and tramways, and the whole situation would have to be considered. He would not be surprised if before long proposals might come forward which he hoped the Council would consider very seriously. The time was ripe for the solution of the problem.

## GLASGOW CORPORATION TRAMWAYS.

In the financial year ended May 31, 1918, the Glasgow tramways have again broken all records. As will be seen from the comparative abstract appended, the surplus to be handed to the common good, which is the sum remaining after the payment of all charges and reserves, and may be regarded as the net profit, amounted to £177,552, as compared with £160,984 in the previous year. This notable result has been obtained in spite of increases in all items of expenditure, amounting to £206,118. The traffic receipts show the very large expansion of £158,603.

| Year ended May 31. | 1918. | 1917. | 1916. | 1915. | 1914. |
|---|---|---|---|---|---|
| Traffic receipts ... ... | £1,404,110 | £1,245,507 | £1,149,264 | £1,070,694 | £1,078,691 |

# FINANCIAL REPORTS AND MEETINGS.

**Norwich Electric Tramways Company.**—A dividend of 6 per cent. has been paid for the year ended June 30, 1917.

**Canadian General Electric Company.**—A dividend has been declared of 2 per cent. on the common stock for the three months to June 30.

**Brazilian Traction, Light and Power Company.**—A quarterly dividend of 1½ per cent. on the cumulative preference shares was paid on July 1.

**Manila Electric Railroad and Lighting Corporation.**—A dividend of 1½ per cent. ($1·50) per share has been declared for the quarter ended June 30.

**Coventry Chain Company.**—An interim dividend of 6 per cent. per annum (7½d. per share) has been declared on the ordinary shares for the half-year ended June 30. The dividend last year was at the same rate.

**Edgar Allen and Company, Limited,** after paying the preference dividend and allocating £20,000 to general reserve, pay 10 per cent. and a bonus of 1s. 6d. per share, making a total of 17½ per cent. on the ordinary shares, free of tax, and carry forward £35,340.

**Yorkshire (West Riding) Electric Tramways Company.**—The directors have decided to pay an interim dividend of 3 per cent. (being at the rate of 6 per cent. per annum) on the 6 per cent. cumulative preference shares for the half-year ended June 30, 1918.

**J. G. White and Company.**—The report for the year ended February 28, 1918, states that net profit was £13,362 ; £41,679 was brought in, making £55,041. The directors recommend a dividend of 6 per cent., less tax, on ordinary shares for the year, and to carry forward £43,041.

**Doulton and Company, Limited.**—After providing for debenture interest, and including £43,552 brought forward, the accounts show a credit balance of £68,703 ; out of which has been paid the preference share dividend for the year ended December 31, 1916, absorbing £17,500, leaving £51,203 to be carried forward.

**Plymouth Corporation Tramways.**—The accounts for the year ended March 31 last show a gross profit of £33,230. After payment of capital charges and income-tax on profit there will be a net profit of £12,338, of which £4,300 will be transferred to the borough fund for the relief of the rates, and £8,038 placed to the reserve fund.

**British Insulated and Helsby Cables.**—An extraordinary meeting was held at Liverpool, when resolutions were confirmed for capitalising the undivided profits, in order that they might be distributed among the ordinary shareholders, and for increasing the capital to £1,500,000 by the creation of 500,000 ordinary shares of £1 each.

**Lancaster Corporation Tramways.**—For the year ended March 31 last, there was a profit of £29. This is the first time in the history of the undertaking that all the charges have been met out of revenue. During the year the tramway debt has been reduced by £1,250. The profit on the omnibuses after paying all charges was £572.

**New General Traction Company.**—The revenue for the year ended March 31 amounted to £18,575. General expenses amounted to £1,191, and debenture interest, less tax, to £5,708, leaving a profit of £11,040. Including £8,070 brought forward, there is a disposable sum of £19,110. A dividend of 4 per cent., less tax, is recommended, carrying forward £8,630.

**Colombo Electric Tramways and Lighting Company.**—After providing for debenture interest and including the amount brought forward, the available balance is £35,239, a decrease of £1,650. A dividend of 10 per cent., free of tax, has been declared, and £18,500 has been carried to the general reserve and renewal fund, leaving £8,655 to be carried forward.

**Prospective Estimated Loss at Belfast.**—At the June meeting of the Belfast Corporation it was stated that there will be an ultimate deficiency of £56,500 in the current year's working of the tramways. In view of the position, a recommendation was made by the Tramways Committee to increase the fares to the maximum of one penny per mile for ordinary passengers, and a halfpenny for workmen.

**Yorkshire (Woollen District) Tramways.**—The report for 1917 states that revenue amounted to £84,585, against £76,140 for 1916. After deducting all expenses chargeable to revenue, including repairs and maintenance, payments to local authorities under agreements, debenture and other interest, and setting aside £10,600 to renewals fund, there remains £19,258 ; £3,487 was brought forward, making £22,745. The directors recommend a dividend at the rate of 6 per cent. per annum on ordinary shares, to place to reserve fund £5,614, and to carry forward £5,129.

**Colchester Corporation Tramways.**—Mr. R. C. Bullough, tramways manager, in his report for the year ended March 31, 1918, states that the total revenue was £17,870, an increase of £1,936, and the highest earnings in the history of the undertaking. The gross profit amounted to £4,909, which was sufficient to pay interest on capital, £1,788 ; allowances to the dependants of men on service, £162 ; and repayment of loan, £2,789 ; leaving a net profit of £35 10s. There was an increase of £670 in traffic expenses and £572 in general repairs and maintenance, due to higher wages and extra cost of material.

**Birmingham Traffic Increase.**—Alderman A. G. Ellaway, in submitting the tramway accounts to the City Council, said that the committee proposed to contribute £25,000 toward the rates. There had been an enormous traffic growth, both by tramways and omnibuses. For the first time the receipts exceeded a million pounds, and since the beginning of this year they had carried four million passengers every week. The weekly receipts averaged over £20,000. The expenditure had increased to even a greater extent. It was estimated that they were carrying the entire population of the city four and a half times per week, and the total was growing, despite the recent increase in fares.

**General Electric Company.**—This company made notable progress during the year ended March 31 last. The net profits have increased from £265,210 to £348,860. Of that sum £100,000 is placed to reserve, bringing that fund to £500,000, as compared with £400,000 a year ago. The board propose to capitalise part of the reserve fund, utilising £300,000 for this purpose, and to allot five new ordinary shares of £1 each for every £10 share now held. The existing £10 ordinary shares are to be converted to £1 shares. It is intended shortly to raise £1,000,000 further capital by an issue of ordinary and preference shares, for which Treasury sanction has been obtained. The ordinary dividend is again 10 per cent., free of tax. The sum to be carried forward is £145,286, subject to excess profits duty, if any. An agreement has been entered into for the purchase of the works of Fraser and Chalmers, Limited, at Erith.

**Rangoon Electric Tramways and Supply Company.**—Presiding at the meeting on June 28, Sir F. W. R. Fryer said that after providing for debenture interest, dividend on preference capital and several allocations mentioned in the report, there was a balance of £9,568. The directors recommended the payment of a dividend on the ordinary shares of 3 per cent., free of income-tax, carrying forward £4,258, an increase of nearly £1,300 as compared with last year. Power house expenses amounted to £61,543, as compared with £35,030, due largely to the higher price of coal. The receipts showed an improvement of £4,500, the passengers being nearly 50 per cent. more. The introduction of lower fares had made tramway travelling much more popular. The motor omnibus service, owing to temporary difficulties, had been suspended, and the vehicles had been converted to other use.

**Bombay Electric Supply.**—The report for 1917 states that the total revenue, including sale of current to tramways, was £439,850, increase £66,383. Expenditure was £183,457 ; increase £26,769 ; net receipts £256,393, increase £39,614. Deduct interest on debenrure debt £33,822, depreciation £43,333, capital amortisation £16,340, balance of English excess profits tax for year 1915, assessed and paid in 1917, £2,634, provision for English excess profits tax for three months ended March 31, 1916, assessed by the London assessors, £10,000, Indian super-tax £3,475, and annual contribution to provident fund £3,537, aggregate £113,141. Balance of profit £143,251, plus £5,215 brought in, making £148,466. The directors recommend, free from all income-tax, to holders domiciled in India, a dividend for the year on ordinary shares at 10 per cent., and bonus at 4 per cent. per annum, and bonus of one month's pay to officers and employees, carrying forward £6,768.

**Brush Electrical Engineering Company.**—Mr. Emile Garcke, chairman, presiding at the annual meeting, said that the year had been one of considerable activity in all departments. Notwithstanding the difficulties of manufacture, owing to the shortage of labour and material, the output, measured in money value, constituted a record. There was an increasing demand for their standard products for war service, but on the rolling stock side their regular business had been practically at a standstill, all their resources in the woodworking shops having been devoted to another product in which they had been particularly successful. The demands for their Ljungstrom turbo-generator sets and accessories had increased so rapidly that a large extension of the machine tool equipment had to be arranged. The present high taxation of profits did not favour the increase of capital which would be so much required after the war. Mr. B. S. Broadhurst, managing director, seconded the motion for the adoption of the report, and a dividend at the rate of 6 per cent. per annum on ordinary stock for years 1916 and 1917 was confirmed.

**Swansea Improvements and Tramways Company.**—The report for the year ended December 31, 1917, shows that the revenue for the year amounted to £79,753, an increase of £7,411. Of the available balance a sum of £3,000 will be placed to reserve ; preference dividends absorb £2,598, and a dividend at the rate of 6 per cent. is recommended on the ordinary shares. An interim dividend at the rate of 5 per cent. was paid for the first half-year in October last. The ordinary dividend requires £7,800, and the balance of £2,654 is being carried forward. Mr. C. G. Tegetmeier, presiding at the annual meeting, said that the business had been carried on under considerable difficulties. Scarcity of labour and materials had imposed a heavy strain on the management, which at the same time had to face increased demands for travelling facilities. This increase in traffic had, however, enabled them to meet the increased charges, and to maintain the dividend of 6 per cent. on ordinary shares which they had paid for some years past. The total revenue was £7,411 more than for the preceding year. The running expenses

Digitized by Google

amounted to £28,752, an increase of £2,668, owing to the increased wages. The progressive movement in wages was still going on. In addition to the increase of £1 a week over pre-war wages, a fresh demand was being made for an increase of 12½ per cent. on the wages now paid. To meet this increase the ordinary fares had been slightly raised, but they were under a statutory obligation to carry workpeople at all hours of the day at a fare of a halfpenny per mile. Mr. David James, the general manager, deserved their warmest thanks.

**Potteries Electric Traction.**—The report for 1917 states that revenue amounted to £176,745. Traffic and parcel receipts were £160,060; increase £24,941. Expenses increased by £24,972, although many repairs and practically all renewals had to be deferred. Deducting all expenses, including debenture interest and £10,000 for renewals, there remains £34,444, as compared with £33,152; £7,261 was brought forward, making £41,705. The directors recommend a dividend on ordinary shares at the rate of 3½ per cent. per annum, to place to reserve account £12,500, and to carry forward £8,380. The reserve now amounts to £57,932, and renewals fund to £55,738. The tramway and omnibus services have been carried on with great difficulty. The period has now expired in which the Corporation of Stoke-on-Trent were entitled to give notice to purchase the tramways and light railways within the borough, and their right to purchase does not arise again until 1924 and 1932 respectively.

**Leeds City Tramways.**—At a meeting of the Tramways Committee, Alderman R. A. Smithson presiding, the report and analysis of the operating expenditure and income for the year ended March 31, presented by Mr. J. B. Hamilton (general manager), were approved. The receipts amounted to £586,631, an increase of £70,824 over the previous year. The earnings per car-mile averaged 14·746d., as compared with 12·817d. for 1916-17. The working expenses amounted to £314,042, or 7·894d. per car-mile, an increase of £53,157. This was attributed mainly to increase in wages amounting to, approximately, £43,000, coupled with advances in the prices of materials used. The annual cost of war bonuses paid to employees amounted to £90,000. Traffic expenses exceeded the previous year's figures by £28,037, of which £16,021 represented the increase in wages paid to motormen and conductors. Another increase of £3,543 under the heading of "ticket check" was owing very largely to the big rise in the price of paper. The fuel bill had increased approximately £1,200. Against the gross profit of £272,588 (£254,920 the previous year) there were the following charges:—Interest on capital, less bank interest, £37,174 (£40,021); redemption fund, £64,899 (£62,222); income-tax, £23,257 (£17,846); war service allowances, £12,053 (£12,890); general renewals, £59,694 (£30,000); and other lesser sums, leaving a net surplus of £214,588 (£175,489). Out of this the amount appropriated in relief of rates was £58,000, as against £79,431 in the previous year.

**Nottingham Corporation Tramways.**—The following is a summary of the results for the year ended March 31, 1918, and for the three preceding years:—

| Year ended March 31. | 1918. | 1917. | 1916. | 1915. |
|---|---|---|---|---|
| | £ | £ | £ | £ |
| Total revenue ... ... ... | 238,867 | 203,155 | 195,392 | 179,315 |
| Working expenses ... ... ... | 155,484 | 138,717 | 121,266 | 112,583 |

## COLLECTION OF USED TICKETS.

The Paper Controller has announced that a trial is to be made on certain routes of the London County Council Tramways with collecting boxes for used tickets, and that if this is found to be satisfactory the collection will be extended as soon as boxes or bags can be obtained. Provided that adequate information is given to passengers as to the necessity for the step, there should be no question as to the experiment proving successful. For years before the war several hundred pounds were realised annually at Glasgow by the sale of used tickets.

## PERSONAL.

**Mr. John Moxon,** chairman of Newport (Mon.) Tramways and Electricity Committee, has been awarded an O.B.E.

**Mr. W. B. Owen** has resigned his position as superintendent of the power-station of Northampton Corporation Tramways.

**Lieut.-Col. W. A. Vignoles,** borough electrical engineer of Grimsby Corporation, has recently been awarded a bar to his D.S.O.

**Mr. Lachlan Mackinnon,** traffic manager, has been appointed deputy general manager of Glasgow Corporation Tramways.

**Mr. H. H. Gordon,** having joined the forces, has resigned his seat on the Highways Committee of the London County Council.

**Mr. F. W. Mackinney,** chief officer of stores of the London County Council, has been granted an increase in salary from £1,000 to £1,250.

**Alderman T. Baker** has been elected chairman of the Plymouth Tramways Committee in succession to the late Alderman S. H. Phillips.

**Mr. J. W. Dugdale-Bradley,** city engineer and surveyor of Westminster, has been granted an increase in salary from £1,200 to £1,300 a year.

**Mr. O. F. Francis,** electrical engineer and tramways manager of Kirkcaldy Corporation, has been granted an increase in salary from £400 to £450 per annum.

**Regimental Sergeant-Major J. R. Jones,** Royal Welsh Fusiliers, formerly a motorman on the West Ham Corporation Tramways, has been awarded a D.C.M.

**Mr. A. F. Lucas,** manager of Leicester Corporation Tramways, has been recommended by the Tramways Committee for an increase in salary from £500 to £600.

**Mr. J. Bowen,** city engineer and surveyor, has been appointed borough engineer and surveyor of Wimbledon, in succession to Mr. C. H. Cooper, who has resigned.

**Mr. O. C. Power,** traffic manager of the Birmingham and Midland Motor Omnibus Company, has been elected a member of the general committee of the Commercial Motor Users' Association.

**Mr. J. B. Feltham,** electrical engineer to Mexborough Urban Council, has been appointed honorary district engineer to the Coal Controller in connection with the fuel rationing scheme.

**Mr. E. George Mawbey,** borough surveyor of Leicester, who was responsible for the construction of the Corporation Tramways, has been granted an increase in salary from £1,250 to £1,400 a year.

**Mr. R. G. Elliott,** station superintendent of Hull City Tramways, has been appointed honorary district engineer and representative of the technical adviser to the Controller of Coal Mines, Board of Trade (Coal Mines Department).

**Mr. J. W. Hame,** city electrical engineer and tramways manager of York, has been appointed district engineer to assist the technical local representative of the Controller of Coal Mines in securing coal economy in local engineering and other works.

**Mr. W. J. Shave,** chief engineer of the London General Omnibus Company, and **Mr. J. G. Clark,** of the Gas Light and Coke Company, have been appointed members of the sub-committee which is investigating the use of gas for traction purposes.

**Lieutenant L. C. F. Bellamy, R.E.,** who resigned the position of manager of Ilkeston Corporation Tramways in September, 1914, to join the forces, has been awarded the Military Cross. He was also mentioned in Sir Douglas Haig's despatch of April 7. Mr. Bellamy is a son of the late Mr. C. R. Bellamy, general manager of the Liverpool Corporation Tramways.

**Mr. W. T. Robson.**—The Southampton Tramways Committee have adopted the following resolution:—"The committee, having heard with extreme regret that the general manager and engineer, Mr. W. T. Robson, has not apparently benefitted in health by his recent vacation, desire to place on record their high appreciation of Mr. Robson's devotion to duty while he has been in the service of the Corporation. Further, the committee recommend Mr. Robson to take an extended holiday, with the sincere hope that he may soon return fully restored to his usual health and able to resume his duties.

**Alderman Ellaway** has been appointed chairman of the Birmingham Tramways Committee. He was an original member of the committee, and has served continuously since his appointment. For ten years he was chairman of the Electric Supply Committee. The Lord Mayor, Alderman Sir David Brooks, alluded to the valuable services rendered to the department by Mr. Harrison Barrow, who recently resigned his membership of the City Council, and on the motion of Alderman Ellaway, a resolution was approved expressing the committee's regret at the circumstances which had led to the resignation by Mr. Barrow of the chairmanship of the Tramways Committee, a position which he had held for ten years, and high appreciation of his valuable services.

**Mr. Fred Coutts,** who was one of the six candidates for the general managership of the Edinburgh Corporation Tramways placed on a short list selected by the committee for further consideration, has sent a letter to the Town Clerk of Edinburgh withdrawing his candidature, in which he explains that his directors, who have

Digitized by Google

treated him in a most liberal way since he entered their service, have asked him in the national interests to remain. As the output of shipbuilding and munitions in the district is, to a large extent, dependent on the tramway service, he feels it would ill become him to refuse a request to remain and give all the help in his power to keep up the full supply of munition workers' cars. He adds that for some years he had looked forward to the probable honour of some day managing the Edinburgh tramways, but in these days one must sink his own personal outlook to his country's needs.

**Lieut. T. F. Goldsmith, M.C.,** of the Manchester Regiment, has recently been awarded a bar to the Military Cross for gallantry and devotion to duty in action. He was formerly engaged as an assistant in the general management office of the Wallasey Corporation Tramways, and has been on active service since the commencement of the war. He joined the 3rd Liverpool Pals Regiment on their formation, and was early promoted to the rank of corporal. After doing good service in the field, he was wounded in action, and invalided home about twelve months ago. On becoming convalescent he was granted a commission in the Manchester Regiment, and while serving in this corps the two honours of the M.C. and bar have been conferred on him. During the recent battles he was unfortunately badly "gassed," but is now making satisfactory progress towards recovery, and expects to be in the front line again within a short period.

**Mr. Ernest Hatton,** general manager and engineer of Newcastle Corporation Tramways, has been awarded an increase in salary from £1,000 to £1,500 per annum, the increase to be made at the rate of £100 a year during the next five years. At the Council meeting on July 3, Mr. R. Mayne, chairman of the Tramways Committee, in moving the acceptance of the Tramways Committee's recommendation, spoke in high praise of Mr. Hatton's work, and gave statistics showing how greatly the traffic and receipts of the undertaking has increased under his management. Mr. Hatton had proved his worth in a practical way. Not only was he their general manager and engineer, but he had brought out and patented several inventions of which they had the advantage. The recommendation was seconded by Mr. A. M. Sutherland, vice-chairman of the committee. Mr. Sheriff S. Easten, advocating the adoption of the report, stated that he thought the manager and his staff deserved to be congratulated on the service that was maintained.

The late **Mr. Robert W. Blackwell,** of Elm Bank, Hampstead, formerly of Great Smith Street, Westminster, chairman of R. W. Blackwell and Company, Limited, and of Johnson and Phillips, Limited, left £91,388 gross—£90,890 net personality.

## CONTRACTS AND ORDERS.

**Hadfields, Limited,** of Sheffield, are supplying steel points and crossings to Salford Tramways Committee.

**The Stirling Boiler Company, Limited,** are supplying a boiler and superheater to Hammersmith Electricity Committee at £4,660, plus £500 for fittings.

**Ilford Tramways Committee** have authorised the tramways manager, Mr. L. E. Harvey, to use the Sandberg process for hardening rails at fifty joints, at £2 per joint.

**Salford Electricity Committee** have accepted the following tenders:—British Westinghouse Company, Limited, e.h.t. switchgear; E. Green and Son, Limited, fuel economisers; Callender's Cable and Construction Company, Limited, e.h.t. cable and telephone cable.

**Glasgow Tramways Committee** have accepted tenders for armature coils from the British Westinghouse Company, Limited; for trolley wire from F. Smith and Company; for 500 tons of rails from Bolckow, Vaughan and Company; and for 200 tons of rails from Walter Scott, Limited.

**The Brush Electrical Engineering Company, Limited,** have an order from the Ipswich Corporation Electricity Committee for a 3,000-K.W. Brush-Ljungstrom turbo-alternator with condensing plant at £19,150. The committee has authority to purchase other plant and machinery required for carrying out the complete scheme.

## ROAD TRANSPORT ORDER.

A Road Transport Order dated June 4, made by the Board of Trade under the Defence of the Realm Regulations, provides for returns as set out in the schedule to the Order of all vehicles and horses which are used for the transport of goods by road, except those used wholly or mainly in agriculture, or horse-drawn vehicles having a load capacity of less than 15 cwt. The returns are required by July 31.

LACK OF FUEL FOR EASTBOURNE OMNIBUSES.—Dissatisfaction has been caused by the reduction of the Corporation omnibus service at Eastbourne, owing to the lack of motor spirit. The Corporation were recently advised to utilise several chassis of older vehicles for the collection of dust, etc. According to Mr. Ellison, the manager, the chassis were not in running order, but could have been made so if he had been able to retain the skilled men.

## TRAMWAY AND LIGHT RAILWAY NOTES.

### BIRMINGHAM.

THE QUESTION OF WOMEN DRIVERS.

The question of employing women as car drivers has been considered, but in view of the heavy traffic on the steep gradients the proposal is not regarded with favour. For some months many discharged soldiers have been employed, and it is hoped that with the assistance given by voluntary drivers, of whom there are nearly three hundred, it may be possible to avoid the employment of women.

### BOURNEMOUTH.

WAR BONUS TO MANAGERS—FEWER STOPPING PLACES.

The Town Council have approved the recommendation of the Tramways Committee that a bonus of 1 per cent. on the net profits for the year be granted to the general manager and the assistant manager, in the proportion of four-fifths to the general manager and one-fifth to the assistant manager. This bonus is to be regarded as in respect of the work of the year covered by the report. With a view to economy in current, 25 per cent. of the stopping places on the tramways have been cancelled. The committee have received petitions from Poole against the restricted service on Sundays, but they have decided that it is impracticable to re-establish the services, which have been suspended in Bournemouth without complaint. The Mayor, however, has stated that the discontinuance will entail a loss of £4,000 a year.

### DUBLIN.

THE PRINTING OF TRAMWAY TICKETS.

In reply to a communication from the Typographical Society, Mr. W. M. Murphy, chairman of the United Tramways Company, has stated that for years a Dublin firm has supplied the company with all the tickets that it has been able to turn out. The firm was not, however, able to supply the company with much more than half of their requirements, which now exceed 66 millions of tickets annually, and for the balance the company has had to go elsewhere, as there is no other printing machinery in Dublin suitable for turning out tickets on a large scale.

### EDINBURGH.

COST OF THE TRAMWAY REPORTS—OPPOSITION TO THE QUEENSFERRY SCHEME.

The Tramways Committee have reported that the accounts rendered by Mr. J. B. Hamilton, of Leeds, and Mr. J. S. Brodie, of Liverpool, who reported on the whole question of the tramway system of the city, amounted to £1,304. Mr. Harrison, convener of the committee, said that the reports were of very great importance, and he believed would settle the kind of traction to be used when the Corporation came to remodel the tramways. A large number of petitions have been lodged against the application of the Corporation for a provisional order to construct tramways to Queensferry. The motor omnibus companies present similar petitions, agreeing that there is no necessity for the scheme, as ample means of communication exist. They advance the view that the tramway would injure the city by ruining one of its finest approaches. The route from Edinburgh to Queensferry, they urge, constitutes one of the principal objects of interest to tourists and holiday-makers, and by impairing this feature the tramway would strike at the very traffic it is designing to cater for. The Edinburgh *Evening News* remarks that such solicitude on the part of the people who have flooded Princes Street and the finest approaches to the city with gas-bags, elevated on the top of ungainly omnibuses, is not convincing. There will be a local inquiry into the application for the Provisional Order.

### GLASGOW.

ACCIDENT TO A 16-YEAR-OLD DRIVER—200 MOTORMEN AFFECTED BY THE NEW MILITARY SERVICE ACT.

Lord Anderson, in the Court of Session on June 21, disposed of two cases arising out of an accident at Victoria Road on December 5, when a car left the rails, dashed on to the pavement, and was overturned. The driver was 16 years of age. One passenger claimed £750 damages from the Corporation in respect of injuries received in the accident. The Corporation admitted liability and tendered £125 with expenses, claiming that the sum sued for was excessive. The court held that the pursuer's health had been seriously impaired, and awarded £500 with expenses. Another passenger, who sued for £500, was awarded £200 with expenses. The labour question is becoming increasingly serious. About 200 additional drivers are affected by the latest military order, and the tramways department has appealed for more women workers. Unless a sufficient number of women offer themselves for training, it will be necessary to curtail the service. Meanwhile, the traffic continues to increase.

### LEICESTER.

CONDUCTORS' DUTY WHEN STOPS ARE REDUCED.

The number of stopping-places on the Leicester tramways has been largely reduced, and from June 30 Sunday services do not begin until 10 a.m. "We must accept any slight inconvenience involved by the reduction of the tramway service uncomplainingly,"

Digitized by Google

says a local writer, " but it behoves conductors to be more than ever watchful that they do not overlook intending passengers at points where the cars pull up."

## LIVERPOOL.

### Evasion of Fares.

Liverpool Tramways Committee have caused to be posted in the tramway cars special notices conveying a warning that persons who are detected alighting from the cars without having paid the fares will be prosecuted.

## LONDON.

### Tramways in Munition Areas and Government Grants—Expenditure on Advertising—Sunday Morning Services—Economy Bonus.

Adverting to the statement made in Parliament by the Financial Secretary of the Ministry of Munitions, that the Government would consider any application made by tramways undertakings in munition areas for a subsidy for munition traffic, Mr. G. H. Hume, chairman of the Highways Committee, in reply to a question by Mr. Gilbert, M.P., said that no grants had been made by the Ministry in respect of the Council's tramways. To meet traffic demands the committee had spent £21,000 on the Woolwich sub-station and doubled the lines in the district at the cost of £6,000. The Highways Committee were considering the matter, which it should be added, arose out of the subsidy paid to the London General Omnibus Company, to which reference is made in our motor traffic section. Replying to another question put to him, Mr. Hume said that the Council had agreed to spend £6,250 per annum in displayed advertisements of the tramway services, and that the general manager attached great importance to continuing the publicity.

Ilford Council Tramways Committee have discontinued the service on Sunday mornings, the chairman stating that such a step is necessary in order to comply with the Board of Trade's requirements for economy in coal consumption. On several other undertakings in the Metropolitan area there has been a reduction in the Sunday car facilities. The London County Council and the Metropolitan Electric Tramways Committee withdrew the through running cars on Sunday mornings, but in response to numerous complaints it has been restored to 10 a.m. The County Council have offered a bonus to motormen and conductors for the saving of energy consumed by the cars. Particulars are given on another page of this issue of the conditions under which the bonus will be paid.

## MANCHESTER.

### Free Rides for Wounded Soldiers.

The Lord Mayor of Manchester, alluding to the question of wounded soldiers being given facilities for free riding on the Manchester tramway cars, recently stated that no wounded soldier need walk from the hospital to the city. All that he had to do was to ask the matron for one of the discs supplied by the Tramways Committee.

## NOTTINGHAM.

### Reduction in Stopping Places.

Councillor R. H. Swain, chairman of the Tramways Committee, announced at the June meeting of the Council that they had decided to abolish or alter 62 of the 1,221 stopping places, in order to economise in energy consumption. This had been done in response to a request by the Board of Trade, and the alterations had been drawn up by the general manager, Mr. J. Aldworth.

## PLYMOUTH.

### Women Inspectors.

Plymouth Tramways Committee have advertised for women inspectors. The demand for men for the forces has much depleted the staff, and a number of cars have had to be withdrawn from the service. At Leeds, women iuspectors have been employed for some time, several of them having been promoted from conductors.

## SHEFFIELD.

### Revision of Stopping Places—No Fare Changes—Auxiliary Motormen.

The Tramways Committee have reported in favour of reducing the request stopping places from 558 to 484. Sheffield is said to be running the highest number of cars compared with the total number of any large undertaking in the United Kingdom. It has not been necessary to discuss the question of increased fares at Sheffield. The subject has not even been brought to the notice of either the Tramways Committee or the Council, and there is at present no intention to deal with the matter. The fare charged at all times is one penny from the centre of the city to each suburban terminus within the city boundary. The traffic returns are showing an increase of 467,000 passengers weekly over the corresponding period last year. Ald. Fenton, deputy chairman of the Tramways Committee, has informed the Council that the employment of women as drivers was not anticipated, but it was a matter of anxiety whether they would be able to continue the service efficiently if the depletion of motormen went on. The committee were asking for auxiliary drivers, men to give twelve hours a week to assist in driving the cars. He added that Alderman G. Addy was already doing work in that direction.

# PATENT LIST.

## Abstracted for "The Tramway and Railway World" from the Official Journal of Patents.

*** If the inventions have been communicated the names of the communicators are given in italics.

### Applications for Letters Patent.

Self-propelled vehicles (8,816)—J. D. Abbott.
Self-propelled vehicles (8,818)—T. D. Abbott.
Trolley heads of overhead electric vehicles (8,793)—C. W. Collins.
Speed indicating or distance registering apparatus for use on motor vehicles (9,031)—L. E. Cowey.
Means for adjusting and attaching actuating cables of brakes for motor vehicles (8,723)—Electric and Ordnance Accessories Company and G. H. Rodway.
Steering motor cars, etc. (8,974)—A. Fenwick.
Radiators for cooling power plant on motor cars, etc. (8,987)—E. C. Gilbody.
Variable speed gears (8,762)—J. M. Gloppe.
Rail joints (8,836)—H. T. Goddin.
Material for pads for concrete sleepers, etc. (8,802)—J. C. Grant.
Gas supply mechanism for motor cars, etc. (8,728)—F. W. Hall.
Variable speed gear (8,714)—J. Nelson.
Lever driving device for vehicles (8,869)—R. Pitblado.
Variable speed gear (8,791)—G. Taylor.
Steering control mechanism for power-driven vehicles (8,950)—J. R. Webb.
Life-guards for fronts of motor omnibuses, etc. (8,880)—W. J. Wicks.
Apparatus for indicating and recording direction and distance of travel of a vehicle (9,299)—A. E. Brewerton.
Steam engines for use on motor vehicles (9,102)—T. Clarkson.
Solid rubber tires (9,350)—Dunlop Rubber Company and C. Macbeth.
Bodies for omnibuses, etc. (9,474)—S. Gage, W. E. John, and London General Omnibus Company.
Bodies of automobiles (9,220)—E. Larson and P. S. Larson.
Tipping bodies for vehicles (9,090)—G. E. Lloyd.
Change-speed gear (9,290)—C. C. A. Roche.
Variable speed gear (9,460)—G. Taylor.
Automobile tires (9,229)—W. I. Varner.
Motor vehicles (9,100)—J. Weller and S. B. Weller.
Devices for lubricating motors of motor vehicles, etc. (9,703)—C. E. Baggs and S. J. Thompson.
Street cars (9,809)—A. L. W. Begg.
Jacks or lifting devices for wheeled vehicles (9,878)—L. E. L. Calvert.
Pumps for charging self-oiling tramway wheels (9,504)—D. J. Davies.
Manufacture of wheels of motor vehicles, etc. (9,554)—E. F. Goodyear.
Motor vehicles (9,669)—W. F. Parker and Sir A. J. Compton-Thornhill.
Elevated railways and tramways (9,498)—S. A. Rogers.
Variable speed gear (9,527)—J. M. Ross.
Prevention of skidding by rubber-tired and self-propelled vehicle wheels (9,537)—W. S. Stone.
Detachable wheels for motor vehicles (9,670)—Sir A. J. Compton-Thornhill.
Means for automatically controlling internal combustion engines of motor cars (9,477 and 9,549)—J. R. Walker.
Electric motor control systems (10,120)—British Thomson-Houston Company (*General Electric Company*).
Systems of electric power transmission (10,256)—British Thomson-Houston Company (*General Electric Company*).
Brake blocks and bands, clutch linings, etc. (10,083)—H. Frood.
Mechanism for motor vehicles (9,931)—H. J. Grafham.
Non-skidding devices for wheel tires (10,297)—T. H. Longmore.
Electric traction (9,965)—H. M. E. Mathé.
Transmission and springing of motor vehicles (10,368)—A.B.C. Motors, Limited, and G. E. Bradshaw.
Rear axle clutch gear for motor vehicles (10,710)—F. W. Evans and I. Stephens.
Chassis construction for motor vehicles (10,614)—C. M. Foster.
Device for placing trollies on tramway overhead wires (10,650)—W. H. Gamble.
Electric generator for motor vehicles (10,548)—J. Gambs.
Bonnets of motor car engines (10,356)—R. Lamb.
Appliance for use on tramway cars, etc., for checking delivery of tickets to passengers (10,508)—F. L. Maclaren.
Electric railway systems (10,687)—E. J. Patelski.

### Specifications Published.

1917.

Power transmission (6,265—*115,267*)—Leyland Motors, Limited, and J. G. P. Thomas.
Driving mechanism for motor tractors (6,411—*115,277*)—Alldays and Onions Pneumatic Engineering Company, N. L. Hilton, and C. E. Simms.
Steering gear for motor vehicles (7,825—*115,309*)—A. Stewart and D. S. Stewart.

Differential devices for the road wheels of a motor-propelled vehicle (10,563—*115,962*)—S. J. Murphy.
Universal drive for motor vehicles wheels (16,430—*116,029*)—O. H. Rogers.
Buffers for motor vehicles (17,864—*112,770*)—Stewart-Warner Speedometer Corporation.
Construction and arrangement of motor vehicles (19,317—*116,046*)—M. C. I. Hunter.
Power transmission gearing for motor vehicles (4,646—*116,112*)—A. F. Kuefer and R. B. Wilson.
Safety devices for automobiles (7,819—*106,831*)—H. Weinberg and C. Weinberg.
Trailers for commercial motor road vehicles (8,026—*116,152*)—J. Banks.
Vehicle lifting jacks (10,937—*116,186*)—T. A. Jenner and F. R. Goddard.
Steering mechanism of motor-propelled vehicles (11,815—*116,192*)—Alldays and Onions Pneumatic Engineering Company, C. E. Simms, and N. L. Hilton.

1918.

Operating mechanism for variable speed and torque gearing (2,871—*115,397*)—Leyland Motors, Limited, and J. G. P. Thomas.
Electric couplings (5,230—*114,429*)—H. de la Valette.
Mounting of internal combustion engines on motor vehicles (3,559—*115,795*)—R. E. Green.
Turning and stopping indicators or signals for road vehicles (5,231—*114,430*)—J. L. Ames.

## ADDRESSES OF AREA TRANSPORT OFFICERS.

The Ministry of Munitions have issued a form containing the addresses of the Area Transport Officers, and notifying to contractors that in many cases the officers will be able to arrange for the conveyance of the material at a less cost than is possible under private arrangements. It is further stated that in many cases they can arrange to save special journeys being made by the contractor's vehicle with possibly an empty journey home. Appended are the addresses of the Area Transport Officers :—

Scotland (Glasgow), 39, Elmbank Crescent ; 'phone, Central 9880.
Newcastle-on-Tyne, Pearl Buildings, Northumberland Street ; 'phone, Newcastle Central 3814.
Middlesbrough, Royal Exchange Buildings ; 'phone, Middlesbrough 466.
Liverpool Pearl Buildings, St. John's Lane ; 'phone, Liverpool Bank 5174.
Manchester, 70, Spring Gardens ; 'phone, City 8450.
Leeds, Quebec Chambers, Quebec Street ; 'phone, Central 5500.
Sheffield, Foster's Buildings ; 'phone, Sheffield 1698.
Bradford, Royal Hotel, Room 14 ; 'phone, Bradford 3866, Ext. 8.
Birmingham, 111, New Street ; 'phone, Midland 2700.
Coventry, 44, Bayley Lane ; 'phone, Coventry 1361.
Cardiff, Principality Buildings, Queen Street ; 'phone Cardiff 5252.
Bristol, 3, Unity Street, College Green ; 'phone, Bristol 5090.

# EFFICIENCY

in a motor vehicle is limited to the efficiency of

# The Engine

*No matter how perfect the other components may be the efficiency of the Vehicle as a whole is singly vested*

Daimler

**The Daimler Co. Ltd.**

Coventry

THE DAIMLER SLEEVE-VALVE ENGINE produces power in abundance. It will maintain a continuity of service which is unapproached by any other engine. The sliding sleeve-valves have eliminated the troublesome springs and tappets, giving a permanent valve setting which is mathematically correct and unvarying for every cylinder.

The absence of any pockets and projecting parts in the combustion chamber avoids all pre-ignition risks, and gives a very high fuel efficiency. The engine is, as a whole, considerably simpler, neater in exterior appearance and lighter than the ordinary type, and ALL WORKING PARTS ARE ENCLOSED AND THOROUGHLY LUBRICATED.

If you have once driven a Daimler you will appreciate its qualities; if not, write for the book "Actual Experience." Sent post free.

There are some very interesting points in the report of the Electrical Vehicle Committee for the past year. Of these, the chief is perhaps the statement of the policy of the Committee in its advocacy of the electric vehicle as compared with other forms of traffic. There has always been a tendency in some quarters to put forward the electric as a direct competitor of the petrol vehicle, and one writer has recently gone so far as to suggest that no petrol vehicles should be permitted to be built above one ton. This kind of thing is no doubt intended to help along the movement in favour of the electric vehicle, but its effect is generally bad, inasmuch as it stirs up the active antagonism of other interests which conceive that they are being unfairly attacked. Consequently it is gratifying to note that the Electric Vehicle Committee does not suggest that the electric vehicle can compete with the petrol vehicle in long distance work, where high speed and unfettered radius of action can be fully utilised. The electric is defined as "essentially a moderate speed machine with a definite limit to its radius of action and a particular characteristic which makes good road surfaces desirable for its satisfactory operation." This is a very fair definition, from which it follows, as the committee points out, that the real competitor of the electric is the horsed vehicle, because the special sphere of both is what is generally termed short distance, frequent stop delivery work in urban and suburban areas. Of course, one cannot pretend that this sort of thing involves no competition with the petrol vehicle. We cannot set up a definite limit between short distance and long distance work. The work of the motor vehicles shows infinite variety from the shortest to the longest, and somewhere along the scale there must be a point or stage at which the short distance and the long distance vehicle are about equally attractive. There is always room to argue as to where this point lies. The advocates of the electric will naturally put it higher up than the advocates of the petrol vehicle, so that, at a certain point, competition must necessarily exist. What we deprecate, however, is the idea of competition all along the scale. There are certain cases in which the petrol vehicle is the only possible thing. There are others in which it would be foolish to employ a petrol vehicle if an electric were available. The steam vehicle, whether of the ordinary lorry or tractor type, or of one of the types burning special fuels, also has its fields of application, which may overlap to some extent the fields of the other two classes. While it is our duty to consider the advantages and disadvantages of each method for any particular case under consideration, before committing ourselves to a decision, we can safely condemn broad claims that any particular method is necessarily the best under all conditions. The Electric Vehicle Committee wisely and clearly condemns the statements of indiscriminating enthusiasts that the electric vehicle is destined in the near future to supplant entirely the petrol and steam types for all classes of work, and adds that there is nothing to give support to this view. But at the same time the committee points out that, in the particular sphere where its advantages are most valuable, there is ample room for immense developments in the production and use of electric vehicles, sufficient to keep everybody concerned thoroughly busy for many years to come, without worrying ever to contest doubtful cases which lie upon the border line.

* * * * * *

Recognising that the above is an honest indication of the actual state of affairs, we feel that it is possible to support the view of the committee that, when normal conditions return, there will be a big demand for electric vehicles, and that this fact should be recognised by people who have hitherto regarded the petrol vehicle as possessing something of a monopoly. Undoubtedly the electric delivery van will become a common object in every considerable town, and it would be a pity if the bulk of the business to be done in these vehicles were left to foreign manufacturers. We recognise the basic principles that British motor manufacturers would not be well advised to split up their output by manufacturing large numbers of models; but we hope that somehow or other, without abandoning this principle, British manufacturers will look to the possibility of producing electric vehicles. Such vehicles are particularly likely to be assembled jobs, at any rate to some extent. The chassis, the electric machines, and the battery must be three totally distinct classes of manufacture. Even the chassis may be assembled from components, so that the work of producing the necessary electric vehicles would apparently fall very naturally to those firms who will, after the war, have at their disposal large shops suitable for assembly work and facilities for quantity manufacture of some definite class. Thus the assembling of a complete electric vehicle in quantity might be combined with the manufacture of a standardised electric motor. No manufacturer of petrol vehicles

# MOTOR TRAFFIC.

need consider it beneath his dignity, if it happens to be convenient, to provide in his own works for the manufacture of a large additional number of bare chassis with the power plant and to become an assembler of electric vehicles to the extent of purchasing the motors and the batteries from specialists, each manufacturing in quantity also. The result should be a thoroughly sound vehicle at a moderate price and national independence of foreign importers.

Some time has passed since the Departmental Committee appointed by the Board of Trade to consider the position of the engineering trades after the war, took evidence from the motor and other industries. The report of that committee has now been published and is a decidedly valuable compilation. The great majority of its recommendations are very sound, and the same applies to its criticisms of the internal organisation of the engineering industry as a whole. In one important respect the conclusions reached strike us as being rather half-hearted. The committee has not had the courage to press home the opinion of the majority of its members, to the effect that a tariff is absolutely necessary, particularly to ensure the future of the lighter sections of the engineering trades. It is hardly safe to conclude that tariffs will come automatically because they will be necessary for revenue purposes. This may or may not be the case, but it seems to us desirable that, if tariffs are a necessity to any industry or industries, those charged with studying such industries should say so without any equivocation. The needs of essential industries will carry more weight with public opinion than any other argument which could be brought to bear upon a question which was at one time unfortunately a matter of acute disagreement between political parties. Probably it will always be conceivably possible to raise the necessary revenue without tariffs. The question of whether the tariff method is to be adopted will probably depend upon whether it is clear that the great industries demand it as being essential to their existence. Consequently, we do not think that the committee should have shirked a plain statement, even if it had to be a majority recommendation and not a unanimous one. We need not be influenced by any idea that our present Allies would think it unfriendly to us to introduce tariffs. In view of their own past action, this would be absolutely unreasonable. On the other hand, unless we are mistaken, they fully expect us to protect our own markets as they have always done. In the case of the motor industry, such protection appears to be rendered at least temporarily necessary by the fact that our friends in America, who are our biggest competitors in this matter, have in their protected home market a much wider sphere of action than is available to the British industry. Without large markets we cannot have quantity output on the most economic lines, and this is what we must have if our industry is to flourish and progress.

* * * * * *

Subject to the reservations suggested by the notes given above, the advice of the Engineering Trades Committee as regards internal organisation appears to be very sound. We must certainly abandon the wasteful process of producing a multiplicity of models from one factory and must concentrate on one or two models, turned out in considerable numbers. If, by means of co-operation, we could not only manufacture but could sell in very large quantity, then selling costs would be reduced to a minimum. Co-operation carried to this extent is, however, very difficult of achievement. It would seem that we must get rid of our rather strong prejudice against assembled articles. We have always been somewhat inclined to look down upon these as not possessing the uniformly good quality of the product of a single manufacturer. If, however, we cannot co-operate to the extent of amalgamation, we shall probably do best by recognising the existence of specialists, each one of whom produces one well-made component in a few standard models and in large numbers. Given a certain degree of collaboration between the makers of such components, there seems to be no reason why a motor vehicle assembled from their various products should be appreciably inferior to one that is wholly built in a single factory. In small ways it may fall short of the ideal, but this should be fully balanced by its lower cost. The recognition of the principle of assembly would result in something very much like the amalgamation of a number of specialised firms for the purpose of building a single article which would be erected in and sold by a central establishment.

## SAVING IN TRANSPORT COSTS.

From a report issued by the Metropolitan Asylums Board it appears that during the past year 5,100 tons of goods have been transported by motor vehicles at a cost of £748, including depreciation and establishment charges. It is estimated that at pre-war rates for horse transport the cost would have been £1,336.

Reporting to Finsbury Borough Council on the working of a Lacre motor sweeper for the 26 weeks ended December 15, 1917, the cleansing superintendent states that the cost of carrying out the same work with horse brooms would have been £383 10s., as against £263 2s. by motor sweeper, showing a net saving of £120 8s. The motor sweeper is travelling 45 miles per night. The comparison is made with war conditions, but, strictly speaking, it should be made with pre-war conditions, when seven horse brooms were at work, as against five now in use. Assuming that only the work of four horse brooms was done, although Mr. Crookes thinks reasonable claim might be made to have displaced five, the result of the six months' working would be as follows:—

| | £ | s. | d. |
|---|---|---|---|
| Working costs of three horse brooms ... | 383 | 10 | 11 |
| Plus additional horse broom displaced one-third ... ... ... ... ... ... | 127 | 16 | 11 |
| | £511 | 7 | 10 |
| Motor working cost ... ... ... ... | 263 | 2 | 3 |
| Net saving for six months ... | £248 | 5 | 7 |

During the winter falls of snow the sweeper did useful work, the value of which it is difficult to estimate.

## TRANSPORT INQUIRY ASKED FOR.

The House of Commons agenda paper contains a notice of a motion for the appointment of a Select Committee to inquire into the methods, working, and equipment of the various agencies by which the system of internal transport and the delivery of goods is carried on, to examine such suggestions as may seem worthy of consideration, to appoint outsiders to serve on any sub-committees it may deem desirable to set up, and to report to the House of Commons from time to time. This subject has been considered more than once by the Commercial Committee—a large and important inter-party body—and should the committee decide to support an appeal for a day for the discussion of the motion the Government would be compelled to give facilities. The motion, however, is hardly likely to get further than the notice paper unless it receives the support of such a body, for instance, as the unofficial Commercial Committee of the House.

# MOTOR TRAFFIC.

## OMNIBUS SELECTION BY TESTS.

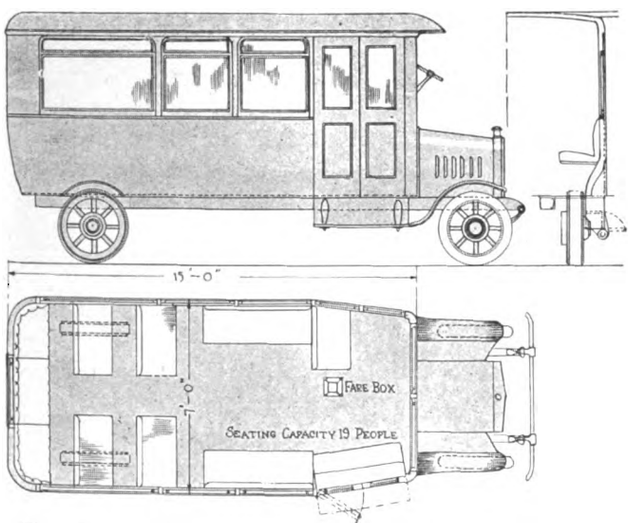
SPECIFICATION OF 19-30 PASSENGER TYPE SUPPLIED TO SAN FRANCISCO COUNCIL.

The White Company, Cleveland, Ohio, have executed a contract for the supply to the San Francisco Municipal Railway Department of five single-deck motor omnibuses for operation through the Golden Park district. The new service will connect the tramway termini on the south and north sides of the park in response to the demand of the residents for additional facilities. The department have also agreed to the request of the State Harbour Commissioners to run a service along the Embarcadero, operating between Fishermen's Wharf on the north end and the channel on the south, a distance of three miles along the water front.

The service through the park is in accordance with the policy advocated by the city engineer of utilising omnibuses for extending the tramway service from the existing termini in order to develop the outlying districts. In his report the engineer laid stress upon the point that any omnibus route once established must be maintained until the traffic becomes heavy enough to warrant tramway extension.

Upon this page will be seen the plan, side and cross section elevations of a type of vehicle which is to form the fleet of five machines. It was selected after a series of competitive tests, and the specifications upon which the tenders were based were as appended :—

*Power.*—The omnibus with a 4,000-lb. load must be able to ascend a 5 per cent. grade on high gear ; on next to high gear a 10 per cent. grade ; and on low gear or reverse an 18 per cent. grade. On the latter grade it must be able to start from a stop.



**Plan, Side and Cross-Sectional Elevations of Omnibuses Selected by San Francisco Tramways Department.**

*Speed.*—Under the same condition of loading an omnibus must be capable of continuously maintaining a schedule speed of 12 miles per hour, including stops, without exceeding at any time a speed of 20 miles per hour on the 100-mile test run over the test course.

*Fuel Consumption.*—The contractor was required to state in his proposal the minimum fuel consumption in gallons per mile for both gasoline and distillate, that he will guarantee for each omnibus. This was determined on the test run. In case of failure to meet this guarantee, 100 dollars was to be deducted from the contract price of the omnibus for each 5 per cent. by which the fuel consumption exceeds the guarantee.

*Motor.*—Four-cylinder, vertical type, to operate silently and without appreciable vibration, all working parts to be completely enclosed and protected from dust and dirt. Thorough lubrication to be provided, including a direct-acting oil circulation system to all bearings not adequately supplied by splash from the crank case. Oil indicator to be installed on the dash. Sealed governor to be provided, by means of which the maximum speed may be limited to any predetermined value between 15 and 25 miles per hour.

*Cooling.*—Pump-driven, circulating-water system, so designed as to permit thermo-syphon circulation in case of pump failure.

*Carburetter.*—Automatic in operation, and economical with either gasoline or distillate ; of a type requiring minimum adjustment and attention.

*Ignition.*—High-tension magneto and auxiliary coil for use with the starting and lighting battery—Bosch system or equal.

*Starting and Lighting System.*—Complete with separate unit generator and motor, storage battery, starting pedal, lighting switches and ammeter. Storage battery to consist of standard make lead or Edison cells, mounted in acid-proof tray. Extreme service conditions to be met by this battery may require burning all lights for six consecutive hours, and starting the engine at least four times an hour, following a period of operation of three hours, during which the omnibus will operate without lights, but with the same conditions as to starting. During this action or cycle of operation it should not be necessary to charge the batteries from an external source.

*Transmission and Axles.*—Three speeds forward and one reverse ; to be of best design and materials. Construction of the driven axle to be such that no power-transmitting member supports any part of the weight of the frame or load.

*Tires.*—Either pneumatic or solid. The contractor to name in his proposal the type, size, and make of tires which he recommends and which he proposes to furnish, and also to name sum which he will permit to be deducted from the price of the omnibus in case the city chooses to furnish at its own expense tires different from the contractor's choice.

*Brakes.*—Two sets to be provided, either of which alone shall stop the loaded omnibus when descending a 15 per cent. grade with engine disconnected, travelling eight miles per hour.

*Control.*—Steering wheel to be on the left side ; levers, instruments, etc., located accordingly.

*Body.*—Construction to be permanent and substantial throughout, framed of hardwood, and rigidly attached to chassis frame.

*Entrance.*—Equipped with double folding door, controlled by lever. The steps to fold up when door is closed, or to be completely enclosed by the door. An emergency door in the rear, controlled from the driver's seat, is also required.

*Windows.*—Are to be of heavy plate-glass, readily removable or replaceable to suit weather conditions, and provided with pantasote curtains on spring rollers.

*Seats.*—Spring cushioned and upholstered with Fabrikoid leather, rigidly supported on light metal pedestals. A section of the rear seat must be hinged so as to clear the emergency doorway when opened.

*Hand Straps and Grab Handles.*—To be provided for the convenience of standing passengers.

*Push Buttons and Buzzer.*—Provided for signalling to the driver.

*Lights.*—One 2-candle-power tail lamp ; two 8-in. headlights, equipped with 21-candle-power gas-filled running lamps ; 4-candle-power lamps for dimming, and Osgood deflector lens ; six nickel-finished dome lights, with Holophane bowls and 10-candle-power lamps ; two reflector fixtures with 6-candle-power lamps for sign-box on roof ; one shaded dash light with 2-candle-power lamp ; one step light equipped with shade and 4-candle-power lamp, to be automatically switched on or off by entrance door mechanism.

*Ventilators.*—To be such as will insure ample circulation of fresh air without draughts when doors and windows are closed.

*Trap Doors.*—To be installed in floor where necessary to give access to mechanism.

*Floor Covering.*—Battleship linoleum ⅜ in. in thickness.

*Finish.*—Entire vehicle to be thoroughly painted, varnished, striped, lettered and numbered. Exterior finish to be Valentine's "VVV" system. Interior woodwork to be stained cherry red and finished as in railway practice.

*Accessories.*—Complete set of small tools, front fender and buffer, electric alarm, with 8-in. gong, hand-operated Claxon, Warner speedometer, Hunter destination sign, Johnson fare-box, and skid chains for rear wheels.

The vehicle has a seating capacity of 19, with total accommodation, seated and standing, for 30 passengers. It is arranged for operation with a driver only, the entrance and pre-payment fare-box being at the front end. At the rear is an emergency exit. The specification was drawn with the view of enabling tenderers to submit their standard commercial vehicle chassis, and the contract was awarded to the vehicle which, in the judgment of the city engineer, would show the lowest net cost of operation over 125,000 miles, and at the same time meet the general requirements of the specifications. The tests were made over the routes on which the vehicles are to be used, and under such loads as they would be called upon to carry in actual service, viz., 4,000 pounds, inclusive of driver and observers. Each tested omnibus went over the course sufficiently often to make the total run of 100 miles for each test.

During the running the governor was set to limit the speed to a maximum of 20 miles per hour, and a schedule speed of 12 miles an hour, including stops, was required. The schedule speed was determined by dividing the total mileage covered by the total elapsed time. Two such test runs were made, using petrol for one

Digitized by Google

# MOTOR TRAFFIC.

and distillate for the other. During each test the omnibus had to make 361 stops, pulling into the kerbstone at each stop, and remaining at rest ten seconds. Additional tests of power and braking were also made to see that the specifications had been complied with.

The contractors were also asked to state the amount which they would allow in case the department desired, after running the vehicle 125,000 miles, to return the chassis without the bodies, the allowance to be applied towards the purchase of a new chassis, or to the payment of any money due to the contractor. No proposal was made by the White Company under either of these suggestions.

## REGISTRATION OF TRANSPORT VEHICLES.

As briefly reported in our issue of June 13, the Board of Trade on June 4 issued a Road Transport Order requiring all owners of vehicles used for the transport of goods by road to make a return in respect of such vehicles, in a form set out in a schedule to this Order. Returns, which are to be made by July 31, 1918, must be sent to the Secretary of the Road Transport Committee for the area in which the vehicle is usually kept. Any person wishing to dispose of any vehicle in respect of which a return has been made under this provision must first give notice in writing to the Secretary of the Road Transport Committee for the area in which the vehicle is registered.

On and after September 1, 1918, vehicles may only be used for the transport of goods by road under and in accordance with the terms of a permit granted by the Road Transport Board. The Order does not apply to vehicles used wholly or mainly in agriculture.

Form R.1, to be used for vehicles driven by motor spirit or gas, is as follows :—

In accordance with the provisions of the Road Transport Order, 1918, you are required to fill in the particulars set out below, and to return this form, in the addressed envelope herewith, to the (name and address of secretary of Area Road Transport Committee) not later than July 31st, 1918.

If at any subsequent date the particulars provided by this form are subject to amendment, you are required to notify the alterations immediately.

1. Name and full address of owner.
2. Occupation or trade.
3. Give the following particulars in respect of each vehicle (including trailers):—
[The particulars required in columns 1 to 10 are the registration number of each vehicle the make, the H.P., type of body, load capacity, average monthly mileage, where stationed, and number of motor spirit licence and/or gas permit.]
4. State for each vehicle—(*a*) Class of goods conveyed. (If various classes of goods are conveyed, the percentage for each class should be stated as far as possible.) (*b*) Towns and villages served, with distances covered.
5. How many of these vehicles are not in regular use?
6. Are any of them laid up for any particular reason? If so, give full particulars.
7. For what proportion of your mileage are your vehicles running empty? Have you considered any means of obviating this?
8. To what extent have you been able to co-operate with other owners of vehicles running to the same towns and villages served by your vehicles, with a view to the elimination of duplicate delivery services wherever possible?
9. Give particulars of any of your vehicles which are let out on hire, stating the name and address of the hirer and the length of contract.
10. Give particulars of any other of your vehicles which you are prepared to let for hire—(*a*) with driver, (*b*) without driver.
11. How many drivers are employed by you—(*a*) male, (*b*) female?
12. If any of your vehicles are held at the disposal of any Authority for use in the event of a national emergency, give the name of the Authority and particulars of the vehicles.
13. State total monthly number of gallons of motor spirit licensed for purchase for use in the vehicles specified in this return.
14. Any other particulars or remarks.

A Form R.2 is to be used for vehicles driven by steam, including tractors and traction engines. In this the preamble is as in Form R.1. The remainder is as follows :—

1, 2. As in Form R.1.
3. Give the following particulars in respect of each vehicle (including trailers):—Columns 1-6, as in Form R.1. Column 7, tires used (steel or rubber). Column 8, load capacity. Column 9, average monthly mileage. Column 10, stationed at.
4, 5, 6, 7, 8, 9. As in Form R.1.
10. Give particulars of any of your vehicles which you are prepared to let for hire.
11. How many drivers are employed by you?
12. As in Form R.1.
13. Any other particulars or remarks.
Remainder of form as in Form R.1.

Form R.3, for vehicles electrically driven, is as appended :—

1, 2. As in Form R.1.
3. Give the following particulars in respect of each vehicle:—Columns 1-6, as in Form R.1. Column 7, type of accumulator and number of cells. Column 8, load capacity, Column 9, average monthly mileage. Column 10, stationed at.
4, 5, 6, 7, 8, 9, 10, 11, 12. As in Form R.1.
13. Any other particulars or remarks.
The remainder of the form is as in Form R.1.

### Statement in the House of Commons.

Replying to an inquiry by Mr. Alden, M.P., whether the Road Transport Board were about to take over the whole of the road transport of the country, with a view to the better distribution of food, and if he could make any statement as to the methods to be employed, Mr. Wardle, Parliamentary Secretary to the Board of Trade, said that it was not proposed to take over the road transport of the country, but the Road Transport Board has been appointed to take such measures as may be necessary to ensure the most economic use of road transport vehicles and their efficient allocation for meeting such requirements as may arise from time to time for the transport of food, munitions, and other war materials, and for the essential needs of the trade and industry of the country. Powers had been taken under a Defence of the Realm Regulation.

## REPAIR SHOPS AND STORES LOST IN FRANCE.

### New Base to be Established in Buckinghamshire.

Considerable opposition was expressed in the House of Commons on June 12 to the appropriation by the War Office of land in South Bucks as a lorry repair base. The site has an area of one and a half square miles, of which 600 acres had growing corn and the rest market gardens, mostly under glass. It was contended that there were many other sites available, such as private parks and golf courses, to say nothing of racecourses and commons.

In opposing a motion for the adjournment, Mr. Macpherson, Under-Secretary of State for War, said the land had been taken for the erecting of a workshop and store for spare parts in connection with the mechanical transport. The German offensive had made it absolutely necessary for them to have a great centralised department of this kind as near London and as near the principal manufacturers as possible. The home of mechanical transport in this country was in or near London, and it was necessary that a centralised depot for the supply of spare parts for the repair of innumerable damaged wagons should be within twenty-five miles of London. It was also necessary that that depot should be near the War Office, the Ministry of Munitions, the Air Ministry, and the most prominent manufacturers who dealt with the various departments. It was further necessary that the depot should be near a railway and a canal in order to afford facilities for the shipment of stores to the theatres of war all over the world. The railway afforded facilities, without going through London, for the shipment of stores to all our theatres of war. It was also necessary that the soil should be gravel. At the present moment we could not procure sufficient steel, and consequently it would be necessary to use a very large amount of ferro-concrete. It was much easier, again, to stand a large number of vehicles on gravel soil. It was also necessary that the ground should be level. The War Office would willingly have taken the private parks, the golf course, or the racecourses to which reference had been made if they had satisfied the conditions, but they had not satisfied those conditions in a single case. The only place near London which satisfied those conditions was the ground they had taken. Before coming to a decision the various departments, including the Food Production Committee, were consulted. General Smuts was appointed by the War Cabinet to consider the case, and he came to the conclusion that this was the only suitable site. At no time in the history of the war had there been a greater necessity for the mobility of the army. He was not going to explain what was happening or what might happen in France, but the enormous need of having at our disposal, near at hand, a great accumulation of vehicles and of spare parts, near the great centres of industry, was most important.

Mr. Bonar Law, in an appeal to the House, mentioned that what made the matter more pressing for the moment was that some of the repairing shops in France had been lost owing to the German advance.

The motion for the adjournment was negatived.

## AUSTIN MOTORS FOR REFUSE COLLECTION.

On April 1, 1917, Marylebone Borough Council brought into operation a scheme for the collection and disposal of house and street refuse by means of a fleet of ten Austin motor wagons, etc. The motor vehicles cost £7,510, and the total capital outlay on other plant and the acquisition and alteration of buildings was £22,054. The expenditure on the collection of house refuse only for the first year's working was £19,290, including £2,000 in extra wages as war bonus, whilst the lowest tender received from contractors was £26,780. For the current year the outlay is estimated at £17,125, as against an offer of a contractor to do the work for £26,730. The Highways Committee state that if house refuse collection and slopping combined for 1917-18 and 1918-19 had been entrusted to a contractor the cost would be £64,560, as against £42,715 by the Council. On the two years' working they anticipate a saving of £21,845, which will have practically covered the whole of the capital outlay, and the Council will possess valuable realisable assets, without having imposed any burden upon the ratepayers beyond what would have been incurred under the old arrangements of contracting for this work.

# MOTOR TRAFFIC.

## PRECEDENCE AMONG PASSENGERS.

The necessity of giving precedence to certain classes of passengers is a question engaging the attention of proprietors of omnibus services. By the East Kent Traction Company it is proposed to give a preference to long distance travellers.

At Sheffield the general manager of the tramways and omnibus department has informed the Tramways Committee that workmen who make regular and daily use of the omnibus from Middlewood terminus for Deepcar and Stocksbridge during the early hours of the morning were crowded out by persons going on holidays using the vehicles as a means of conveyance for a portion of their journey. Instructions were given that whilst this class of traffic continued the regular riders going to work were to be given precedence. In the case of the crowding out of parents and relatives visiting children at Lodge Moor Hospital, thus causing them to be too late to be admitted during visiting hours, the manager was directed to give precedence on the omnibuses to persons who could produce visiting cards during the hours those are available.

## RAIL TRACTOR AT GUILDFORD.

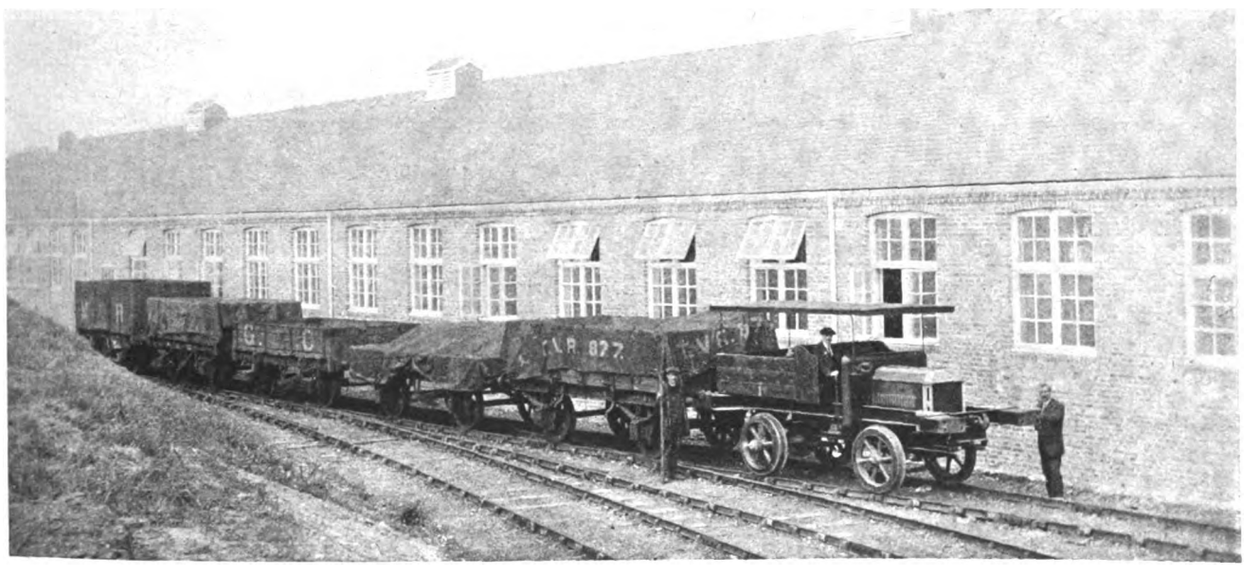
The accompanying photograph shows a Dennis rail motor hauling a train of goods wagons in a siding at the factory of Dennis Brothers at Guildford. In the background is shown their new erecting shop.

## THE ASSOCIATION OF MOTOR MANUFACTURERS.

At the annual meeting of the Association of British Motor and Allied Manufacturers, Limited, Mr. Manville, who has been president of the association since it was re-organised, was unable to stand for re-election, having taken up the important duties of president of the Association of Chambers of Commerce of the United Kingdom. In proposing the adoption of the report and balance sheet, Mr. Manville referred in detail to the work done by the Association, emphasising its present utility to the industry and its great possibilities of future usefulness. The balance sheet and report were unanimously adopted.

Mr. H. C. B. Underdown was elected president for the ensuing year. Mr. Underdown is chairman and managing director of Commercial Cars, Limited, and a director of Sheffield Simplex Motor Works, Limited. He is also chairman of the motor industry branch committee of the Engineering Trades Committee of the Ministry of Reconstruction, and at present holds the position of director of agricultural machinery at the Ministry of Munitions. He has for the past two years been chairman of the commercial vehicle section of the association.

Mr. Bernard Caillard was elected vice-president. Mr. Caillard is a director of Wolseley Motors, Limited, and managing director of the British Lighting and Ignition Company. In the latter capacity he has for the past year been chairman of the accessories and components section of the association. He is also vice-chairman of the motor industry branch committee.



**A Rail Motor at Dennis Bros' Works.**

This rail motor has proved very useful, and carries out efficiently the work for which it was designed.

## MOTOR TRUCK STOPPING TESTS.

Tests indicating that a heavy motor truck can stop in a shorter space than a light one running at the same speed have been carried out at Chicago. The cars were 3 and 2-ton trucks, a 6-cylinder touring car, and a ½-ton truck. On weighing the trucks the lighter ones were found to be heavier in front than in the rear. This caused the rear end to skid sideways, and deprive the truck of the necessary weight and traction to make a sudden stop, whereas on the heavier trucks the rear end was the heavier, giving the car the necessary weight to draw it to a stop.

MOTOR INDUSTRY BRANCH COMMITTEE.—The Engineering Trades (New Industries) Committee of the Ministry of Reconstruction is now constituted as follows:—Chairman, Mr. H. C. B. Underdown, vice-chairman, Mr. B. Caillard; Messrs. E. Powell, J. W. Stocks, L. Walton, E. M. C. Instone, G. M. Young, C. A. Hyde, and H. M. Wyatt.

The executive at present consists of the president, vice-president, and ex-president, and of representatives of each section. The office of chairman and vice-chairman of the sections are filled as follows:—

Section of Private Car Manufacturers.—Chairman, Mr. E. Howell (Humber); vice-chairman, Mr. L. Walton (Vauxhall).

Commercial Vehicle Section.—Chairman, Mr. H. C. B. Underdown (Commercial Cars); vice-chairman, Mr. F. Churchill (J. and E. Hall).

Motor Cycle Section.—Chairman, Mr. J. W. Stocks (Components); vice-chairman, Mr. C. A. Hyde (B.S.A.).

Accessories and Components Section.—Chairman, Mr. Bernard Caillard (British Lighting and Ignition Company); vice-chairman, Mr. H. Johnson (Lucas).

A number of special committees are also in being. These include an Overseas Trade Committee under the chairmanship of Mr. Powell, and a committee under the chairmanship of Mr. Underdown dealing with the formation of a Research Association. The association is now very fully representative, receiving the almost unanimous support of the British motor industry. This is important in view of the fact that the Government frequently desires to take the opinion of associations fully qualified to speak for various British industries.

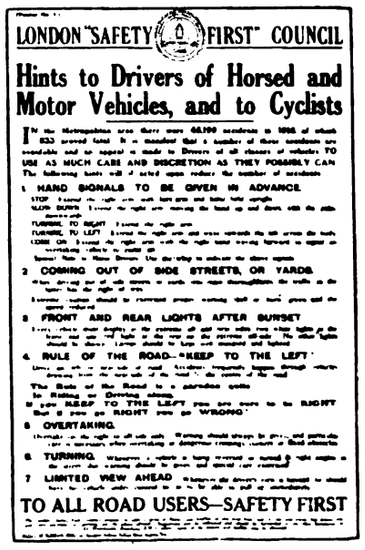
# MOTOR TRAFFIC.

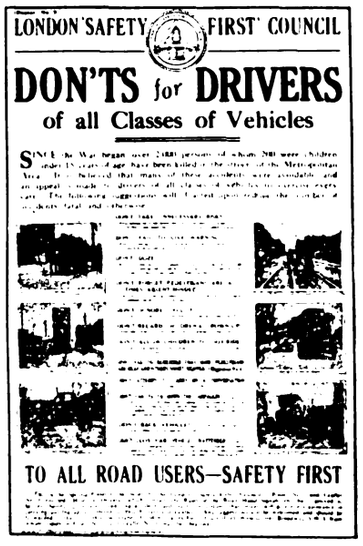
## "SAFETY FIRST" PROPAGANDA.

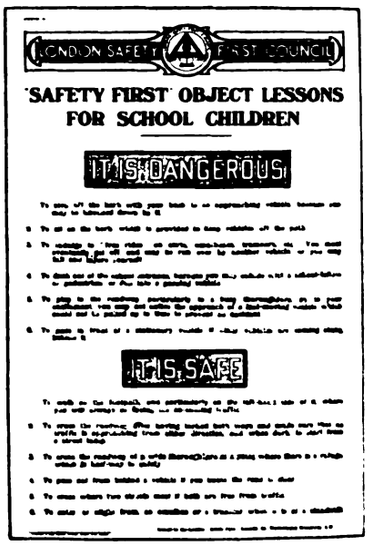
Reproductions are given on this page of three posters which were issued by the London "Safety First" Council during the first year of their existence. For the drafting of the placards the Council secured the aid of special committees composed of members who have a practical acquaintance with the dangers of the road and the results arising from the neglect of ordinary care on the part of drivers and of school children.

The placards have been widely distributed among tramway, motor, and horse drivers, besides the elementary and secondary schools in Greater London. In many car sheds, garages, stables, and schools care has been taken to give the publications prominent display, and in some instances they have been mounted on cardboard for preservation.

During the present year the Council are extending their activities to the inculcation of safety principles in industrial life, as well as instituting local propaganda through the medium of public meetings to be held in town halls throughout the Metropolitan area.







## SAFETY LEAGUE RULES.

The United Railways and Electric Company, of Baltimore, Md., recently inaugurated the Safety League movement. In some instances whole school classes took an interest in the matter and applied for membership. A neat button and card of membership are forwarded to all applicants, the card reading as follows:—

I.....promise that:

(1) Before crossing a street I will look in both directions to see that no vehicles are near, and if the street is clear I will cross quickly, without stopping.
(2) I will always cross streets at the corner crossing, because it is dangerous to cross in the middle of blocks.
(3) I will not play in streets on which there are car lines, or where many automobiles and other vehicles pass.
(4) I will not hang on behind cars, or automobiles or wagons.
(5) I will not throw stones at cars or other vehicles.
(6) I will assist younger children in crossing the streets.
(7) I will not stand near the kerb of pavements when vehicles are passing close to it.
(8) I will not use roller skates, coasters, or sleds on streets upon which there are car tracks.
(9) I will do all I can to be safe, and to encourage others to live up to these safety rules.

Dennis Brothers' Post-war Output.—The directors of Messrs. Dennis Brothers, motor vehicle and fire appliance manufacturers, have completed arrangements whereby after the war their Guildford Works will be able to complete fifty vehicles a week to meet the increased demand which is anticipated for their lorries. The entire output is at present taken by the Government except in instances where vehicles are permitted to be supplied to firms engaged upon war work.

## DRIVERS' CHAMPIONSHIP.

The Commercial Motor Users' Association have issued the results of the annual examination of drivers of industrial and commercial motor vehicles. Owing to the war there was again no scrutiny of the machines and no parade on the Victoria Embankment. In his report to the committee of the Association the examiner stated that in view of the stress of the present times the attendance at the examination was exceedingly good, and the quality of the papers was better than in any previous year, the papers of the champion drivers being specially worthy of merit. Appended are the results:—

*Championship Petrol Examination.*—Champion driver, £10, B. Spurrier (employer, E. Nelson and Company, Limited); £5, diploma, and medal, W. G. Hayter (employer, H. G. Burford and Company, Limited).

*Championship Steam Examination.*—Champion driver, £10, diploma, and medal, W. R. Davey (employer, Wm. Whitley, Limited); £5, diploma, and medal, W. Stevens (employer, Sun Flour Mills Company, Limited).

*Class* II.—*Petrol Written Examinations.*—£5, certificate, and badge, C. F. Bidmead (employer, Westminster Electric Corporation, Limited); equal second, £3, certificate, and badge each, D. Cummings (employer, Schweppes, Limited) and J. P. Cox (employer, The Gas Light and Coke Company); £2 and certificate, E. Makinson, (employer, Bryant and May, Limited).

*Class* II.—*Steam Written Examinations.*—£5, certificate, and badge, O. Hornsby (employer, Sun Flour Mills Company, Limited); equal second, £3, certificate, and badge each, J. Copsey (employer, Gas Light and Coke Company), and W. Polley (employer, Bryant and May, Limited); £2 and certificate, J. Grove (employer, E. Nelson and Company, Limited).

*Class* II. *Oral Examination.* £3, certificate, and badge, G. H. Warren (employer, Bluthner and Company, Limited); £2, certificate, and badge, F. B. Mobbs (employer, Bryant and May, Limited).

Arrangements are well in hand for the holding of the 1919 inspection and examinations, and full particulars thereof can be obtained from the secretary, Commercial Motor Users' Association, Pall Mall, London, S.W.1.

Charging Stations for Electric Vehicles.—The General Vehicle Company, whose present address is 4, Southampton Row, London, W.C.1, have issued in folder form a map showing the charging stations for electric vehicles in a radius of 20 miles of London. The map not only gives the location of the station, but also a key which refers to the number on the map and the names and addresses of the proprietors of the station, together with the telephone numbers and particulars of whom inquiries should be made. Useful information for drivers of electric vehicles is also given, and a number of "Hints to Drivers" specially recommended by the "Safety First" Council. The General Vehicle Company will be pleased to furnish copies to any of our readers.

# MOTOR TRAFFIC.

## ENDOWMENT SCHEME FOR EMPLOYEES.

The directors of the Dunlop Rubber Company, Limited, have inaugurated, for the benefit of the male staff, an endowment insurance scheme, which is considered to be an improvement upon schemes adopted by other employers. The primary object of the fund is to secure the welfare of the dependent rather than that of the man employed, and this view received a substantial confirmation from grateful letters from Dunlop men on active service, to whose dependents the company makes payments. The company decided that the best policy would be to take out endowment policies of insurance on the lives of men who have been with them sufficiently long, and have attained such a position that they have proved themselves suitable in every way to become attached to the company permanently. The Dunlop scheme is non-contributory, and yet it is contributory in that a man is expected to insure himself personally, and it has been a source of considerable surprise to the company to find out how many of its employees were either not insured at all or were insured inadequately.

To meet the point—that length of service should be rewarded in greater measure than ability which is recognised by salary—a formula was devised which, as will be seen from the tables in the booklet, provides an equitable basis. The booklet can be obtained from the secretary of the Endowment Fund, Dunlop Rubber Company, Limited, Aston Cross, Birmingham, on application, and the company will welcome inquiries from those interested. As salaries increase so are additional policies taken out, so that there is every incentive to a man to increase his efficiency, obtain a higher salary, and become endowed for an additional amount. A man who is receiving a salary less than the qualifying salary does not actually lose if he receives the qualifying salary subsequently, because ultimately all his past service counts in making the calculation of the endowment for him. The scheme has the advantage of obviating trouble which necessarily arises in dealing with the institution of a pension scheme, due to the fact that men of varying ages receiving varying salaries have already served varying years of service and are likely to serve further varying years of service,

With a view to assisting members of the staff to become qualified for the insurance the company have established a novel educational scheme (in conjunction with the Birmingham Educational Authorities) which provides tuition in the use of the actual forms used in the company's business, and every assistance is given to employees to make definite progress from one department to another.

## ACROSS THE PENNINE RANGE.

Twelve years' continuous service stands to the credit of the 4-ton Commer car shown in the accompanying illustration. The vehicle was delivered by Messrs. Grace and Sutcliffe, of Keighley, to its

**A Four-Ton Commer Car.**

first owners in May, 1906. In the service of its present owner it regularly makes several journeys a week between Huddersfield and Colne, each time, of course, surmounting the famous Pennine Range.

NATURAL GAS FOR A MOTOR CAR.—Gas which is being given off at the top of a bore tube, sunk for water at Messrs. Hoyles' works at Huddersfield, has been stored in large quantities. It is being used to run a motor car and for heating boilers.

## ALBION PETROL WAGONS.

The subjoined illustration shows part of a convoy of Albion wagons fitted with 800-gallon petrol tanks, *en route* for delivery to the War

Department. These vehicles are used extensively both at home and abroad, the type having been developed by the Albion Motor Car Company from an early stage of the war.

## DUNLOP RUBBER CHAIRMANSHIP.

The directors of the Dunlop Rubber Company have appointed Sir Arthur du Cros, Bart., M.P., to the chairmanship. As the "head and front" of this gigantic business for many years, it is only fitting that Sir Arthur should be endowed with the titular distinction. He has seen the manufacture of Dunlop tires rise from a small affair with a working capital of some £17,000 to the immense undertaking it is now, capitalised at £6,000,000, with nearly a dozen subsidiary and allied companies, each yielding substantial profits, owners of its own factories and freeholds, and with depots practically all over the world. These wonderful developments are chiefly due to the foresight and enterprise of the new chairman, who is also responsible for the acquisition of the rubber plantations, which are among the company's greatest assets. Another of Sir Arthur's schemes—the provision of cotton mills for the manufacture of woven cotton duck for tire casings—has been equally successful, and extension in this direction is likely to be found necessary.

Sir Arthur du Cros' appointment ensures continuity of the progressive and enterprising policy which has always characterised the Dunlop Company, whose organisation and resources have been of great assistance to the Government in the conduct of the war.

## WEST OF ENGLAND CENTRE OF THE C.M.U.A.

A West of England Centre of the Commercial Motor Users' Association has recently been formed. This decision was arrived at by a meeting held at the Grand Hotel, Bristol, presided over by Mr. H. F. Cooper, secretary of the Bristol Tramways and Carriage Company. A statement as to the benefits to be derived from the formation of a centre was made by Mr. F. G. Bristow, general secretary of the association, and at the conclusion of the speech the chairman said that Mr. Bristow had favourably impressed them regarding the importance and usefulness of the association, and the desirability of forming a local centre. Mr. W. G. Verdon Smith, managing director of Bristol Tramways and Carriage Company, was elected chairman of the centre, and among those appointed on the committee were Mr. W. E. Hardy, general manager of Bath Electric Tramways Company, and Mr. H. F. Cooper, with Mr. Verdon Smith as chairman. The committee is thoroughly representative. Mr. W. E. Chapple (Car and General Insurance Company) was appointed hon. secretary.

LONDON'S LAST HORSED FIRE ENGINE WITHDRAWN.—The London Fire Brigade is now equipped with engines that are all motor propelled, the last horse-drawn machine having recently been taken out of service. In a short time all the escapes and ladder vans will be either propelled by electric battery or petrol.

# MOTOR TRAFFIC.

## GRANTS FOR MOTOR OMNIBUSES.

### STATEMENTS IN THE HOUSE OF COMMONS.

Mr. GILBERT, in the House of Commons on June 26, asked the Minister of Munitions the names of the seventeen routes in South-East London on which motor omnibuses receive financial grants from his department; on which routes are competing municipal tramways; for how long these financial grants have been given, and what amount was paid in the year 1917 or the nearest complete year; and will he state if any such grants have been paid or offered to municipal tramways who have supplied special and extra service for munition workers in South-East London?

THE FINANCIAL SECRETARY TO THE MINISTRY OF MUNITIONS (Sir L. Worthington Evans).—Financial grants have been made in respect of 17 services for the twelve months ending 30th June, 1917, amounting to £44,312. No claim has been put forward by the tramway companies, and the question of the payment of a grant to them has therefore not arisen. The names of the seventeen routes are as follows:—

(75) Plumstead and Croydon; (75a) Church Manorway and Sydenham; (72) Woolwich and Croydon; (99) Poplar and Erith; (99a) Poplar and Crayford; (109) Penge and Woolwich; (93) Sidcup and Woolwich; (53) West Hampstead and Plumstead; (53a) Charing Cross and Plumstead Common; (15) Ladbroke Grove and Gallions; (101) North Woolwich and Wanstead; (101b) North Woolwich and Cranbrook Park; (21a) Wood Green and Woolwich; (56) Mile End and Milwall; (103) Cubitt Town and Blackwall; (108) Blackwall Lane and Poplar; (110) Farnborough and Crayford.

These routes are in competition with the tramways, as follows:—(99 and 99a) between Blackwall Lane and Plumstead; (109) between Eltham and Woolwich; (93) between Eltham and Woolwich; (53 and 53a) between Westminster Bridge and Woolwich; (101 and 101b) between the "Earl of Essex" and North Woolwich; (15) between the East Ham Town Hall and Gallions; (21a) between Shooters Hill Road and Woolwich.

Mr. GILBERT.—If the tramway authorities put forward any claim for consideration in the same way as the omnibus companies, will the hon. gentleman undertake to consider it?

Sir L. WORTHINGTON EVANS.—Of course, I am bound to consider any claim put forward, but the services rendered appear to me to be different.

Mr. PERCY HARRIS.—Has the Minister got authority from the Treasury for this £44,000?

Sir L. WORTHINGTON EVANS.—I have no doubt we have, but if the hon. member wants a very precise answer I must ask for notice.

Mr. GILBERT asked the Minister of Munitions (1) whether any financial grants to motor omnibus companies have been paid for any district of London other than the South-east district, and, if so, what districts; and for what districts further negotiations are proceeding for future grants, and with which motor omnibus companies; (2) whether he will state the average earnings per mile of the omnibuses in South-east London and the average earnings of omnibuses in the remainder of the Metropolis on which financial grants from his department have been paid; will he state if all the grants have been paid to one or more omnibus companies; and will he give the names of the companies who have received such grants?

Sir WORTHINGTON EVANS.—No financial grants have been paid to omnibus companies in any districts of London other than the South-east district, though a number of private hire arrangements exist, whereby certain State-owned factories and controlled establishments in the London area have hired omnibuses for conveyance of workers where the travelling facilities are inadequate. The earnings per mile of the omnibuses in South-east London were given to my right hon. friend in confidence, and I cannot disclose them. The grants have been made to the London General Omnibus Company.

On July 1 Mr. GILBERT asked if any conditions as to cheap fares being charged to workpeople travelling on the various routes were made with the London General Omnibus Company when grants were given for motor omnibuses, and whether the company allowed any passengers to travel on any of the subsidised routes at workmen's fares at the same price as municipal tramway services allowed workpeople to travel.

Sir L. WORTHINGTON EVANS replied that the answer was in the negative, but cheap return fares had been instituted by the General Omnibus Company at the request of the Ministry, these being restricted to the employees of the Arsenal. In some cases the fares were the same as those charged by the tramway service. In some cases they were higher, but in no case lower. In reply to a further question, Sir Worthington said that the amount claimed by the London General Omnibus Company for 1917-18 would be larger than that paid for 1916-17. Negotiations were proceeding for a revision of the arrangement with the company, including the provision of additional services on existing routes.

## COMPRESSED GAS TESTS.

### EXPERT SUB-COMMITTEE APPOINTED.

The President of the Board of Trade has appointed a sub-committee to carry out experiments and tests in connection with the determination of factors affecting portable gas generating plants and the commercial use of gas for traction purposes in containers at high pressure, together with questions relative to liquefaction, absorption and enrichment, and in regard to improvements in the existing arrangements for effecting the admixture of gas and air under varying conditions. The sub-committee comprises Sir Boverton Redwood (chairman); Lieut.-Col. R. K. Bagnall-Wild, R.E.; Mr. W. Worby Beaumont, M.Inst.C.E.; Major A. McN. Cooper-Key; Professor C. Vernon Boys, F.R.S.; Major B. Hopkinson, F.R.S.; Mr. E. S. Shrapnell-Smith, and Mr. S. Straker, M.I.Mech.E.; with Mr. C. H. Lamb, of H.M. Petroleum Executive, as secretary.

The committee are carrying out their work in conjunction with the Aeronautical Inspection Directorate of the Royal Air Force, the London General Omnibus Company's engineer, and the Gas Light and Coke Company's chemists. Under section 17 of the Gas Traction Committee's report, assistance in the development of the use of compressed gas is being given to the London General Omnibus Company, the tramway department of Liverpool Corporation, and the motor omnibus department of Eastbourne Corporation.

## MOTOR INDUSTRY HONOURS.

King's Birthday Honours were conferred upon the following gentlemen:

C.M.G.

Lieut.-Col. R. K. Bagnall-Wild, Aircraft Inspection Department, formerly of the War Office Mechanical Transport Centre and ex-president of the Institution of Automobile Engineers.

KNIGHT COMMANDERS (K.B.E.).

John E. Thornycroft, director Messrs. J. I. Thornycroft and Company, Limited.

Percival L. D. Perry, Director of Mechanical Warfare in the Ministry of Munitions, and head of the Ford Motor Company in England.

COMMANDERS (C.B.E.).

Colonel Wm. Ed. Donohue, Inspector of Mechanical Transport, Eastern theatres of operations.

E. M. Iliffe, Controller Machine Tool Department, Ministry of Munitions.

Wm. Malesbury Letts, managing director Crossley Motors, Limited.

Ed. Shrapnell-Smith, chairman Standing Joint Committee of Mechanical Road Transport Associations, and Chief Economy Officer of Petroleum Executive.

OFFICERS (O.B.E.).

G. H. Baillie, Chief Technical Adviser of Dilution of Labour, Ministry of Munitions, a member, and formerly chairman, of the Expert and Technical Committee of the R.A.C.

F. W. Hudlass, consulting engineer to the Motor Ambulance Department, British Red Cross Society (London Headquarters), and engineer to the R.A.C.

A. J. McCormack, chairman of the Labour Advisory Committee of the Ministry of Labour, and technical managing director of Wolseley, Limited.

T. C. Pullinger, managing director of Arrol-Johnston, Limited.

A. Wormald, works manager Rolls-Royce, Limited.

## PERSONAL ITEMS.

Mr. E. W. DELACOUR, publicity manager of the Anglo-Mexican Petroleum Company, has been elected president of the Society of Motor Advertising Managers for the ensuing year.

Mr. HERBERT O. DAVIES, of John I. Thornycroft and Company, Limited, has again been elected honorary secretary and treasurer of the Society of Motor Advertising Managers.

Mr. CHAS. ASHTON LISTER, J.P., the chairman of the M. L. Magneto Syndicate, Limited, of Coventry, has been gazetted a Commander of the Order of the British Empire.

# MOTOR TRAFFIC.

## MOTOR VEHICLES FOR MUNICIPALITIES.

TILBURY URBAN COUNCIL are obtaining a motor fire engine.

TYNEMOUTH CORPORATION are purchasing a motor ambulance.

TORQUAY CORPORATION have agreed to obtain a 5-ton Foden steam wagon.

HULL CITY COUNCIL have decided to purchase an electric vehicle at an estimated cost of £1,160.

KIRBYMOORSIDE RURAL COUNCIL are purchasing two motor wagons fitted with tipping bodies.

HAYWOOD CORPORATION have applied for sanction to borrow the money to purchase two motor vehicles.

THORNABY COUNCIL have applied for sanction to borrow the money for the purchase of a motor fire engine.

INVERNESS COUNCIL have planned to instal a complete service of electric vehicles for refuse collection and disposal.

POPLAR COUNCIL are extending their motor garage, and have accepted an estimate of £1,254 for carrying out the work.

SOUTH SHIELDS CORPORATION have accepted the tender of Electromobile (Leeds), Limited, for the supply of an electric vehicle.

RICHMOND COUNCIL are purchasing steam wagons fitted with interchangeable bodies for use in the surveyor's department.

BRENTWOOD URBAN COUNCIL have under consideration a recommendation for the purchase of a motor to haul their fire engine.

BARNET URBAN COUNCIL have accepted the tender of Leyland Motors, Limited, for the supply of a motor fire engine at £1,160.

HASLINGDEN URBAN COUNCIL have under consideration a recommendation for the purchase of motor wagons for the collection of refuse.

## MOTOR TRAFFIC NOTES.

MOTOR TRADE ASSOCIATION.—Mr. Leslie Walton, one of the joint managing directors of Vauxhall Motors, Limited, has been elected president of the Motor Trade Association.

TRANSPORT AS AN AID TO HOUSING AT BRISTOL.—The Corporation have asked the sanction of the Local Government Board to erect 5,000 houses in village suburbs on the outskirts of the city. All the sites are within convenient motor omnibus and tramway communication with the city.

EASTBOURNE OMNIBUS AND COMPRESSED GAS.—The Motor Omnibus Committee reported at the last meeting of the Town Council that the gas compressor was sufficiently completed to make an experimental running test, which proved highly satisfactory, and there was every reason to believe that the scheme would prove a success.

CHARGING OF VEHICLE BATTERIES AT BLACKBURN.—In the annual report of the electrical engineer of Blackburn Corporation it is stated energy had been supplied for a number of electrical vehicles operating in the town, and it is expected that this class of demand will rapidly increase, as the advantages of electrical vehicles are many, and the running cost very low.

EXCURSION VEHICLES RUNNING AT HOVE.—The Southdown Motor Services, Limited, have been informed that Hove Corporation propose to renew the licences of six motor coaches which run pleasure trips to places outside the borough. The Watch Committee disagreed with a proposal that the services should be discontinued owing to the restriction on the supply of gas.

ROAD MOTORS FOR AMERICAN RAILWAYS.—Provision has been made in the Bill concerning the Government control of U.S.A.

**A View of the Administrative Portion of the Works of Messrs. Dennis Brothers, Limited, of Guildford.**
[The building on the right is the power station, which is equipped with three 250-h.p. oil engines direct coupled to dynamos.]

GILLINGHAM CORPORATION have informed the War Department that providing the latter contribute a portion of the cost they are willing to instal a motor fire engine.

WORTHING CORPORATION have received a report from the surveyor recommending the purchase of an electric vehicle from Ransom, Sims and Jeffries at a cost of £1,033.

OSWESTRY COUNCIL have instructed the surveyor to obtain information as to the working of motor vehicles for street cleansing in various towns, and to report thereon.

CARDIFF CORPORATION have under consideration a recommendation whereby the whole of the street cleansing and refuse collection services would be carried out by motor machines.

GLASGOW CORPORATION have authorised the City engineer to purchase two second-hand motor cars at £250 each. The object of this purchase is to enable the engineer to reduce the number of emergency men employed at the various depots by a more effective use of the staff.

BRADFORD CORPORATION have renewed a contract with the Dunlop Rubber Company, Limited, for the supply of solid rubber tires to all the motor vehicles employed in the tramways department. The arrangement is for an indefinite period on the terms of the last contract, subject to six months' notice from either party for its determination.

SWANSEA CORPORATION have had under consideration a report from their engineer with reference to a visit paid by the chairman and vice-chairman of the Public Health Committee and himself to Birmingham, Nottingham, Sheffield, Cheltenham, and Blackpool to obtain information with regard to electric battery vehicles. As a result a recommendation that two Edison vehicles be obtained, at an estimated cost of £2,457, has been agreed to.

railroads for the purchase of motor trucks to relieve transportation if this step is found advisable by the President. The clause provides that 500,000,000 dollars may be appropriated out of the Public Treasury from any funds not otherwise appropriated.

MOTOR TRANSPORT EMPLOYERS' FEDERATION.—A London and district branch of the Motor Transport Employers' Federation has been established, with Mr. W. G. Lobjoit, J.P., as chairman, and Mr. F. G. Bristow, 83, Pall Mall, London, S.W.1, as secretary. One of the main objects of the Federation is to bring into existence Conciliation Boards on the lines of the Whitley Report.

COST OF MOTOR EQUIPMENT FOR U.S.A. CAMPS.—It is reported from Washington that the motor vehicle equipment for the 33 divisional camps of the United States army has cost 54,000,000 dollars. A large part of this sum was for trucks. Each division uses ten light trucks and 343 three-ton trucks. The cost of building repair shops and of heating garages during the cold season totals to 8,700,000 dollars.

THE ECONOMY OF STEAM MOTOR VEHICLES.—Capt. A. D. Provand, of the Mechanical Transport Department, speaking at the annual meeting of the Manchester Steam Users' Association, referred to the increased use of steam as against petrol in the propulsion of heavy vehicles, and stated that in the matter of economy experience showed that steam had the advantage by five to one. This fact would have an important bearing after the war, as it had even now.

GOODS CONVEYANCE BY WAR DEPARTMENT LORRIES.—The Under-Secretary for War, replying in the House of Commons to Colonel Gretton, said he was not aware that any motor lorries driven by army drivers have travelled empty from Scotland and the north of England to the south. If his hon. and gallant friend was referring to lorries delivered by manufacturers it was the practice, whenever possible, to use such lorries for the conveyance of goods.

# MOTOR TRAFFIC.

STEAM LORRY COSTS AT CARDIFF.—In a report presented to Cardiff Corporation by the city treasurer, the following particulars are given of the working costs of four steam vehicles during a period of 44 weeks :—Four motors, at work 1,000 days. Total expenditure, £934 18s. (£115 3s. 9d. thereof for maintenance, repairs, and renewals), being 18s. 8d. per day, or, excluding maintenance, etc., 16s. 5d. per day.

OBJECTION TO TWO LAMPS ON A VEHICLE.—The National Union of Horse and Vehicle Owners is agitating for the cancellation of the Defence of the Realm Act regulation which requires a lighted lamp on the near side in front. They have informed the Home Secretary that the use of the lamp referred to is unnecessary, and that the material employed could be better utilised for more important national purposes. Motorists, on the other hand, have long advocated two front lamps for all vehicles.

INSPECTION OF LICENCES IN THE METROPOLIS.—Under the powers conferred upon the police and military authorities at the time that petrol restriction licences were issued, there was an inspection of permits carried by private car and motor cycle drivers on all the main roads out of London on June 26. An inspection post was also established opposite the Horse Guards' Avenue on the Victoria Embankment. The civil police stopped all private cars, the military police paying attention to army and navy vehicles.

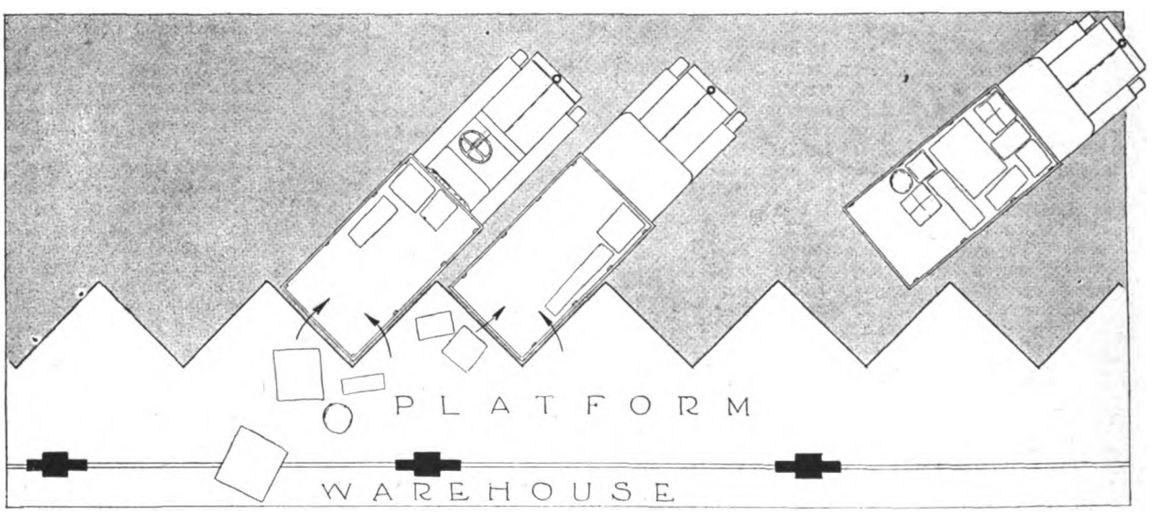
GREAT DECREASE IN U.S.A. TRUCK EXPORTS.—In March, 1918, only 143 trucks were shipped from the United States to France and 100 to England. The value amounts to 876,500 dollars, whereas the valuation for the parts shipped during the same period is 854,228 dollars. During March, 1917, there were 1,040 trucks shipped, which were valued at 2,961,389 dollars. The figures as given for this year show almost an 80 per cent. decrease in the exports to the Allies, while there is a decrease in the valuation of nearly 70 per cent.

PETROL FOR CABS UNDER URGENT CIRCUMSTANCES.—On June 18 an Order was issued amending the Motor Spirit (Consolidation) and Gas Restriction Order, for the purpose of permitting petrol or petrol substitute, obtained by licence, to be used for driving a cab "on any sudden or urgent necessity where life or limb is, or may be, endangered," and for the conveyance of a sick or injured person to a place where he may receive treatment, or to or from a hospital or nursing home. A motor cab may also be used for visits to a person who is dangerously ill. Under the original Order private vehicles only might be used for the aforementioned purposes.

BRIGHTON AND HOVE SERVICES OF TILLING, LIMITED.—The whole of the motor omnibus services of Hove and Brighton are now run by Thos. Tilling, Limited. The company have recently received from Hove Corporation licences for 49 petrol and 12 battery omnibuses, but they have arranged to reduce the services over certain roads owing to the difficulty experienced by the Council in obtaining materials for the repair of the same. The company propose to use the electric vehicles in the event of additional petrol restrictions being imposed. These machines were purchased from the late Brighton and District General Omnibus Company, and had been in use for many years.

MOTOR QUESTIONS IN AUSTRALIA.—At the request of Adelaide Municipal Council, the State Government have made compulsory the provision of efficient silencers on motor vehicles. The Victorian Country Roads Board have again asked the Government to introduce legislation for (*a*) a general maximum speed limit for the whole State ; (*b*) power to reduce speed below that limit on certain roads or sections of roads where it is considered that the general speed limit allowed under (*a*) would be dangerous to the road users or destructive to the road ; (*c*) power to prohibit chars-a-banc traffic on certain specified roads. The Board assert that unless some protective measures be adopted the cost of road maintenance will soon reach proportions that will be beyond the financial resources of the municipalities and the Board.

TAX ON U.S.A. TRUCKS COMPETING WITH RAIL AND WATER TRANSPORT.—So far there is by no means a general collection of the tax referred to in the following Act, which was passed for the United States on November 1, 1917 :—" On and after November 1, 1917, there shall be levied, assessed, collected, and paid (*a*) a tax equivalent to 3 per centum of the amount paid for the transportation by rail or water or by any form of mechanical motor power when in competition with carriers by rail or water by freight consigned from one point in the United States to another." The failure to put it into general operation is attributed to slowness in providing machinery for collection.



**Saw-Tooth Loading Platform of the Ninth Street Warehouse, Cleveland, Ohio.**

[This is designed to save motor wagon loading time by permitting both sides and end loading and unloading respectively, at the same time. Each vehicle has a greater length of platform and takes up less room in front of the platform and requires less turning.]

MUNICIPAL SWEEPERS AND WAGONS.—In showing the members of the West Midland District of the Institution of Municipal and County Engineers the various engineering features of Birmingham, the city engineer mentioned that the Corporation have two 18-H.P. motor sweeping machines, made by the Lacre Motor Car Company. The width swept by the brush is about 5 ft. 10 in. The machine is fitted with a water tank to hold 150 gallons to enable a light spray to be delivered through two nozzles in advance of the brush to prevent dust rising. The speed recommended is from eight to ten miles per hour on paved roads, and about six miles per hour on macadam. This machine will do as much work as three horse-drawn brooms. There are also in use several steam tipping wagons made by Foden, Limited, Aveling and Porter, Limited, and the Yorkshire Commercial Motor Company, Limited.

NEW SPEED REGULATIONS IN AN AMERICAN STATE.—The maximum speed allowances for pneumatic and solid tire vehicles in Great Britain appear out of date beside the new limits enacted by Maryland State Legislature. In the drawing up of the measure the Senate consulted the Auto Club of Maryland. For solid-tired vehicles weighing 2 tons or less the speed limit has been reduced to 25 miles maximum, and for 2 tons and not in excess of 6 tons, 15 miles. Over 6 tons it is 12 miles, which is the maximum for most solid-tired commercial vehicles in this country. In thickly-populated places the maximum speed for all motor vehicles is to be 15 miles instead of 12 miles, and in outlying urban districts 18 miles. In the open country a speed up to 60 miles is to be permitted to pneumatics provided reasonable care is taken by the driver. Penalties for exceeding that limit range from 100 dollars to 1,000 dollars.

## The Shortage of Skilled Drivers

If you engage an inexperienced driver to run your lorry it is not improbable that he will one day throw in his clutch with all the vigour his inexperience prompts—strain the whole of your chassis—and do damage in your gear box that will take days to repair.

Make it impossible for him to do this by having the clutch lined with Ferodo fabric. It will then engage sweetly however violently applied—transmit maximum power from engine to back axle—never slip or seize. Ferodo fabric lasts much longer than leather or any imitations of Ferodo fabric, and will not burn out. It gives infinitely superior service at less cost.

## THE AUTOBUS IN THE TRAMWAY WORLD.

**Motor Traffic Section.**

When "The Tramway and Railway World" was founded in 1892, motor traction was, of course, scarcely dreamt of, but the avowed object of the paper was to encourage all new methods that gave promise of usefulness.

In pursuance of that policy the progress of motor traction received early attention. Commenting on the historic motor parade to Brighton in 1896, "The Tramway and Railway World" predicted that

"It would give a prodigious impulse to transport both by road and rail."

Within a decade this prophecy was abundantly fulfilled and so much space had been devoted to the new industry that in 1906 a special

**MOTOR TRAFFIC SECTION**

was added. Every illustrated issue thus contains a section devoted especially to motor cars for Public Service, and includes articles on current topics, illustrated descriptions of new types of vehicles and accessories, and the latest news.

**Public Service Motor Cars.**

The importance of this section will be gathered from the fact that an increasing number of the leading municipal authorities, railway and transport companies, now own and operate large fleets of motor vehicles, including omnibuses, chars-a-bancs, motor lorries for the transport of goods, parcel delivery vans, tower wagons, motor street sweepers, and a variety of other types.

# Transport Problems

were such in the initial stages of the "great struggle" as called for unprecedented effort in the manufacture of the Motor Lorry.

Despite the urgency, and consequent greater speed with which it had to be produced, the

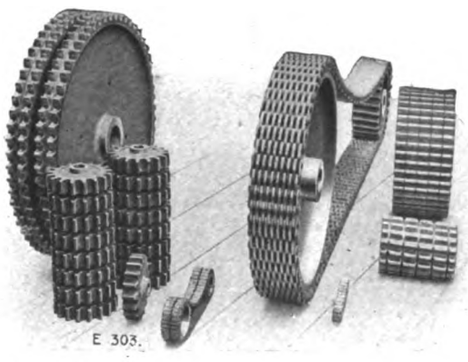
MAUDSLAY

not only demonstrated what a lorry could do, but stood up to every test which the exceptional conditions placed upon it.

Since then the unique experience gained, and our continual study of the requirements of a lorry in every capacity and under all circumstances, has enabled us to produce a MAUDSLAY of unsurpassed design, construction and efficiency – a lorry capable of rendering incomparable service in the "transport problems" of the future. We suggest, therefore, that with the quick decision which characterises the successful business man, you send us now your name to register as a prospective purchaser.

MAUDSLAY MOTOR Co Ltd COVENTRY

1353



For all kinds of power transmission, where 98% efficiency, combined with a silent even turning movement is desired. "The Coventry" Noiseless Chains and Wheels are admirably adapted. They give the maximum of service under all conditions. :: Blueprints, Estimates, and —— Handbook C/3 free on application. ——

## THE LIVERPOOL STRIKE.

THE industrial unrest, of which the Liverpool tramway employees' strike is one of the latest symptoms, does not appear to be diminishing, although wages and other conditions of employment have been greatly improved, particularly within the last year. Several recent strikes are clearly the result of what can only be described as the irresponsible outlook of many of the workers, which is often shown by the way in which agreements made on their behalf by their own appointed leaders in their trade unions are at times repudiated. Surely the dislocation of the life of a great city at any time, and above all in war time, is absolutely unjustifiable when it is remembered that there exists machinery for the adjustment of differences and that the tramway workers have proceeded in a way calculated to produce the maximum of inconvenience to the public. There is a Chief Industrial Commissioner, whose business it is to adjust labour disputes; but, instead of submitting grievances to the proper quarter, the Association of Municipal Employees in Liverpool, which, although registered as a trade union, does not appear to be recognised as such by the Trade Union Congress, called out the workers on a two days' notice given at the week-end. If arbitration is better than fighting in international affairs, then surely the same principle applies in industrial affairs. Great expectations are being formed as to the future of the Whitley Industrial Councils, at which employees will be represented as well as employers. But unless the workers as a whole show a greater sense of responsibility for their own actions, and in particular a greater sense of duty in adhering to agreements which may be made by authorised representatives on their behalf, the outlook for the Councils and for industry generally in the near future cannot be said to be very promising. As regards the Liverpool tramway strike, we cannot see that there is any justification, such as may be alleged for strikes in some other industries, because municipal workers are represented on the Authority by which they are employed and will generally find members ready to listen to reasonable suggestions for improving their conditions. We are glad that consideration has produced wiser counsels among the Liverpool tramway strikers, and we hope that those of them who participated in the scenes of disorder which have taken place will thoroughly regret their action.

## TRAMCAR AND MOTOR BUS WORKERS' WAGES.

AWARD OF THE COMMITTEE ON PRODUCTION.

The award of the Committee on Production in regard to the application of tramway and motor omnibus workers for increased wages was issued on Thursday, and runs as follows :—

1.—The parties to this reference are :—

(1) The Municipal Tramways Conference and the Tramways and Light Railways Association, the London General Omnibus Company, Ltd., the London Omnibus Section of Messrs. Thomas Tilling, Ltd., and the National Steam Car Co., Ltd; and

(2) The National Transport Workers' Federation.

2.—The claim submitted was as follows :—

(1) Application for an increase of 12½ per cent. upon the present total earnings or for a standard increase equivalent thereto.

(2) For such revision of the award of the Committee on Production of 8th March, 1918, as shall provide for equal payment of women as for men, both as regards war wages and basic rates.

3—The matter was referred by the Ministry of Labour to the Committee on Production for settlement and representatives of the parties were heard on 2nd July, 1918.

4.—The award of 8th March provided for certain increases to the employees concerned. The nature of such increases is indicated in paragraphs 4, 5, and 6 of the award, which are as follows :—

(4) The decision of the Committee is that there shall be paid to the men concerned aged 18 and over, and to the grades of women aged 18 and over whose terms of employment include an undertaking that they shall be paid the same rates as the grades of men whose places they have filled, such advance as shall give £1 per week over the pre-war rates of the grades concerned, payment to be made on the basis of a week of six days or six shifts.

(5) In the case of women aged 18 and over not covered by clause 4 the advances now being paid shall be increased by 4s. per week, subject to a maximum of 20s. per week over the pre-war rates of the grades concerned.

(6) In the case of boys and girls and youths under 18 years of age the advances now being paid shall be increased by such amount per week as shall give the girls, boys and youths, under 18 years of age in the undertaking concerned half the additional advances given by this award to the men or women as the case may be in the same undertaking.

The award of the Committee in settlement of the claim now submitted is :—

(5) The war wages advance of 20/- a week at present paid to the able bodied men concerned aged 21 years and over shall be increased to 25s. a week, payment to be made on the basis of a week of six days or six shifts.

6.—This award shall not operate so as to depress the wages at present paid to any of the men concerned.

7.—The advance hereby awarded covers and is to be deemed to be in full settlement of any claim with respect to the bonus of 12½ per cent.

8.—The advance hereby awarded covers and shall not apply to men to whom the bonus of 12½ per cent. has been given under any order made by the Minister of Munitions or any award, or otherwise.

9.—The amount hereby awarded is to be taken into account in the calculation of payment for overtime or night duty or for work on Sundays and holidays, it is to be regarded as a war advance and is to be recognised as being due to and dependent on the existence of the abnormal conditions now prevailing in consequence of the war.

10.—This award shall not apply to classes of employees, such as building trades operatives, whose wages have customarily been regulated by the movements in the wages of the trades in which workmen of the same classes are ordinarily employed.

11.—So far as the London General Omnibus Company are concerned this award is applicable only to those grades of employees with respect to whom there are agreements between the Company and the London and Provincial Union of Licensed Vehicle Workers, but the award does not cover, and is not to be deemed to cover, the grades of employees dealt with in the agreement between the Company and the Union of 11th April, 1918.

12.—The advance granted under this award is to be paid as from the beginning of the first full pay following the date of the award.

13.—The decision of the Committee with respect to the application for a bonus of 12½ per cent. on the earnings so far as regards women is that the claim has not been established.

14.—It was stated on behalf of the employees at the hearing that they accepted the principle that in cases in which women are doing the same work as men, and doing it efficiently and provided their employment does not involve increased expenditure compared with the employment of men, they should be paid the same wages as men. They showed, however, that in the case of tramway and motor omnibus undertakings a large number of women employees stay only a comparatively short time, and their attendance is less regular than that of men, necessitating the keeping of a large spare staff

## WEEKLY LIST OF TENDERS INVITED.

### CITY OF BELFAST.

**Electricity Department.**

The Belfast Corporation invite Tenders for the manufacture, delivery and erection in Belfast of the undermentioned Plant, viz.:—

SECTION A.
(a) Two 6,000 KW. Turbo-alternators, etc.
(b) One 500 KW. Turbo-generator, etc.
(c) One 30 KW. Balance-booster, etc.

SECTION B.
(a) Four 48,000 lb. per hour Water-tube Boilers, etc.
(b) Four Fuel Economisers, etc.
(c) Two steel Chimneys, with fans, etc.

SECTION C.
Two electrically-driven Boiler Feed Pumps, etc.

SECTION D.
Accumulators.

SECTION E.
Three 500 KW. and five 1,000 KW. Rotary Converters, with transformers, etc.

SECTION F.
Two 250 K.V.A., two 350 K.V.A., and six 1,250 K.V.A. Static Transformers.

Tenders will be considered for either of the main sections, or for either of the sub-sections.

The Specifications and other particulars may be obtained on application either to Messrs. PREECE, CARDEW, SNELL AND RIDER, 8, Queen Anne's Gate, Westminster, S.W.1, or to Mr T. W. BLOXAM, M.I.E.E., City Electrical Engineer, Belfast.

Tenders, upon the presented forms, must be lodged in the Town Clerk's Office, City Hall, Belfast, not later than 16th August, 1918.

The lowest or any Tender will not necessarily be accepted.

An official receipt must be obtained for every Tender delivered by hand. Tenders sent by post must be registered.

R. MEYER, Town Clerk.

### BOROUGH OF GILLINGHAM, KENT.

**Electric Light and Power Department.**

The Council of the above Borough invite tenders for the supply and erection at their Electric Generating Station, Gillingham Road, Gillingham, Kent, of one combined Diesel Engine and Alternator of 640 B.H.P.

Full particulars may be obtained from the Borough Electrical Engineer.

Sealed tenders addressed to the undersigned must be delivered not later than noon on the 22nd July, 1918.

The Councill do not bind themselves to accept the lowest or any tender.

By Order, F. C. BOUCHER,
Town Clerk.

Corporation Offices,
Gillingham, Kent, 2nd July, 1918.

## POSITIONS VACANT.

**Ticket Inspectors.**

Two smart Ticket Inspectors wanted. Men with experience as Ticket Clerks or Conductors will be considered. Age 25 to 40. Wages 45s. Permanent position to suitable men. Apply, Tramway Company, Oxford.

### BOROUGH OF SWINDON.

**Electricity Department.**

Wanted, a Shift Engineer to take charge of a shift in a certified undertaking. The generating station supplies A.C., 3-phase, D.C. and tramways. Ljungstrom turbines and mixed pressure turbine. An up-to-date boiler house plant being put in. Wages £3 plus 8s. plus 12½ per cent. per week.

Applications, giving age and full details and experience and training, to be sent to the undersigned not later than July 21st.

A. DIMMACK,
Borough Electrical Engineer.

### BURNLEY CORPORATION ELECTRICITY DEPARTMENT.

**Junior Shift Engineers.**

Wanted, Two Junior Shift Engineers accustomed to the running of E.H.T. 3-phase and D.C. Plant. Wages, including war bonus. £3 3s. per week.

Applications, with copies of recent testimonials, to reach the undersigned not later than Wednesday, July 17th.

J. E. STARKIE,
Borough Electrical Engineer.

### ENGINEERING ASSISTANT.

The Corporation invite applications for the appointment in the Borough Engineer's Department of an Engineering Assistant (temporary), at a salary of £150 per annum, including war bonus.

Applicants must have had experience in surveying and levelling, inspection of building and drainage works, and a knowledge of building construction.

Applications, in candidates' own handwriting, giving full particulars of experience, age, present and previous appointments, and accompanied by three recent testimonials, to be delivered to Mr. Chas. L. des Forges, Town Clerk, Town Hall, Rotherham, by 10 a.m. on July 15th. Canvassing will disqualify.

## FOR SALE.

### CITY OF ABERDEEN.

The City of Aberdeen Electricity Department have for sale three 420 kw. D.C. 440-550-volt direct coupled sets. Engines by Willans and Robinson, generators by Westinghouse, Bruce Peebles and Mavor and Coulson respectively.

Also one Alley and McLellan surface condenser of 2,100 sq. ft. cooling surface and one Edwards' three-throw air pump 9 in. diameter by 9 in. stroke (maker, Alley and McLellan). All in excellent condition, and can be seen running by appointment.

Offers for above can be addressed to undersigned on or before noon, Tuesday, July 23.

J. ALEY BELL,
City Electrical Engineer,
Aberdeen.

## THE LIVERPOOL STRIKE.

THE industrial unrest, of which the Liverpool tramway employees' strike is one of the latest symptoms, does not appear to be diminishing, although wages and other conditions of employment have been greatly improved, particularly within the last year. Several recent strikes are clearly the result of what can only be described as the irresponsible outlook of many of the workers, which is often shown by the way in which agreements made on their behalf by their own appointed leaders in their trade unions are at times repudiated. Surely the dislocation of the life of a great city at any time, and above all in war time, is absolutely unjustifiable when it is remembered that there exists machinery for the adjustment of differences and that the tramway workers have proceeded in a way calculated to produce the maximum of inconvenience to the public. There is a Chief Industrial Commissioner, whose business it is to adjust labour disputes; but, instead of submitting grievances to the proper quarter, the Association of Municipal Employees in Liverpool, which, although registered as a trade union, does not appear to be recognised as such by the Trade Union Congress, called out the workers on a two days' notice given at the week-end. If arbitration is better than fighting in international affairs, then surely the same principle applies in industrial affairs. Great expectations are being formed as to the future of the Whitley Industrial Councils, at which employees will be represented as well as employers. But unless the workers as a whole show a greater sense of responsibility for their own actions, and in particular a greater sense of duty in adhering to agreements which may be made by authorised representatives on their behalf, the outlook for the Councils and for industry generally in the near future cannot be said to be very promising. As regards the Liverpool tramway strike, we cannot see that there is any justification, such as may be alleged for strikes in some other industries, because municipal workers are represented on the Authority by which they are employed and will generally find members ready to listen to reasonable suggestions for improving their conditions. We are glad that consideration has produced wiser counsels among the Liverpool tramway strikers, and we hope that those of them who participated in the scenes of disorder which have taken place will thoroughly regret their action.

## TRAMCAR AND MOTOR BUS WORKERS' WAGES.

AWARD OF THE COMMITTEE ON PRODUCTION.

The award of the Committee on Production in regard to the application of tramway and motor omnibus workers for increased wages was issued on Thursday, and runs as follows :—

1.—The parties to this reference are :—

(1) The Municipal Tramways Conference and the Tramways and Light Railways Association, the London General Omnibus Company, Ltd., the London Omnibus Section of Messrs. Thomas Tilling, Ltd., and the National Steam Car Co., Ltd; and

(2) The National Transport Workers' Federation.

2.—The claim submitted was as follows :—

(1) Application for an increase of 12½ per cent. upon the present total earnings or for a standard increase equivalent thereto.

(2) For such revision of the award of the Committee on Production of 8th March, 1918, as shall provide for equal payment of women as for men, both as regards war wages and basic rates.

3—The matter was referred by the Ministry of Labour to the Committee on Production for settlement and representatives of the parties were heard on 2nd July, 1918.

4.—The award of 8th March provided for certain increases to the employees concerned. The nature of such increases is indicated in paragraphs 4, 5, and 6 of the award, which are as follows :—

(4) The decision of the Committee is that there shall be paid to the men concerned aged 18 and over, and to the grades of women aged 18 and over whose terms of employment include an undertaking that they shall be paid the same rates as the grades of men whose places they have filled, such advance as shall give £1 per week over the pre-war rates of the grades concerned, payment to be made on the basis of a week of six days or six shifts.

(5) In the case of women aged 18 and over not covered by clause 4 the advances now being paid shall be increased by 4s. per week, subject to a maximum of 20s. per week over the pre-war rates of the grades concerned.

(6) In the case of boys and girls and youths under 18 years of age the advances now being paid shall be increased by such amount per week as shall give the girls, boys and youths, under 18 years of age in the undertaking concerned half the additional advances given by this award to the men or women as the case may be in the same undertaking.

The award of the Committee in settlement of the claim now submitted is :—

(5) The war wages advance of 20/- a week at present paid to the able bodied men concerned aged 21 years and over shall be increased to 25s. a week, payment to be made on the basis of a week of six days or six shifts.

6.—This award shall not operate so as to depress the wages at present paid to any of the men concerned.

7.—The advance hereby awarded covers and is to be deemed to be in full settlement of any claim with respect to the bonus of 12½ per cent.

8.—The advance hereby awarded covers and shall not apply to men to whom the bonus of 12½ per cent. has been given under any order made by the Minister of Munitions or any award, or otherwise.

9.—The amount hereby awarded is to be taken into account in the calculation of payment for overtime or night duty or for work on Sundays and holidays, it is to be regarded as a war advance and is to be recognised as being due to and dependent on the existence of the abnormal conditions now prevailing in consequence of the war.

10.—This award shall not apply to classes of employees, such as building trades operatives, whose wages have customarily been regulated by the movements in the wages of the trades in which workmen of the same classes are ordinarily employed.

11.—So far as the London General Omnibus Company are concerned this award is applicable only to those grades of employees with respect to whom there are agreements between the Company and the London and Provincial Union of Licensed Vehicle Workers, but the award does not cover, and is not to be deemed to cover, the grades of employees dealt with in the agreement between the Company and the Union of 11th April, 1918.

12.—The advance granted under this award is to be paid as from the beginning of the first full pay following the date of the award.

13.—The decision of the Committee with respect to the application for a bonus of 12½ per cent. on the earnings so far as regards women is that the claim has not been established.

14.—It was stated on behalf of the employers at the hearing that they accepted the principle that in cases in which women are doing the same work as men, and doing it efficiently and provided their employment does not involve increased expenditure compared with the employment of men, they should be paid the same wages as men. They showed, however, that in the case of tramway and motor omnibus undertakings a large number of women employees stay only a comparatively short time, and their attendance is less regular than that of men, necessitating the keeping of a large spare staff

Digitized by Google

which adds to the cost of employing women. The decision of the Committee with reference to the application that the award of March 8th, 1918, should be revised so as to provide equal payment to women and men both as regards war wages and basic rates is that the claim has not been established.—WILLIAM W. MACKENZIE. JOHN M. DENNY. JOHN BARKER.

H. J. Wilson, Secretary, 5, Old Palace Yard, S W.1.,
9th July, 1918.

## THE TRAMWAY STRIKE AT LIVERPOOL.

The strike of a section of Liverpool tramway employees this week caused much inconvenience to the public by reason of the greatly reduced service of cars. Disorderly scenes were witnessed at several of the depots owing to the pickets, both men and women, coming into conflict with those who had remained at work.

Attempts were made by women conductors on strike to pull off the cars women who were working. Temporary drivers, who included some inspectors, were employed, and a fair service was maintained. The strike has been engineered by the Municipal Employees' Association, a comparatively new organisation. It is a registered trade union, but the Trades Union Congress has declined to recognise it.

Forty-eight hours' notice was given to the tramway authorities on Saturday by the Municipal Employees' Association that their members would strike unless their demands were satisfied—and they carried out their threat as from midnight on Monday. The Tramway Committee's point of view appears to be that already various sections of tramway employees have unions in existence covering all departments, one of these being the Tramway and Vehicle Workers' Union, which is affiliated with the Trades Union Congress, and that the newer association is superfluous.

Simultaneously with the notification of the employees' threat to the Tramways Committee, a similar notice was sent by the secretary of the association in London to the Chief Industrial Commissioner, but the strikers at Liverpool apparently omitted to mention this fact to the committee. The usual course of procedure is that having notified the commissioner they are expected to allow three weeks to elapse while necessary inquiries are made with a view to arbitration, and to go on working in the meantime. The Industrial Commissioner insists that this course shall be followed. By their reckless and unconstitutional action the members of the Muncipal Employees' Association have caused the greatest inconvenience to the public, who have a right to complain of their treatment, especially at a critical period of the war.

The Strike Committee's programme of demands includes recognition of the association; a forty-eight hours week without reduction of pay; weather screens in front of drivers; various alterations in duties; an arbitration board on the lines of the Whitley Report; certain alterations in the working of the Tramways Benefit Society, etc. It has been stated on behalf of the Tramways Committee that the list of demands made was absolutely at variance with the established practice throughout the country in connection with the operation of tramway systems.

A meeting of those who had remained loyal to the Corporation was held, the local branch secretary of the Tramway and Vehicle Workers' Union presiding. The position of affairs was discussed, and the following resolution was passed:—"That this meeting of tramway workers pledges itself to remain at work during the strike among a section of Liverpool tramwaymen, at the same time deprecating the adoption of any unconstitutional method for bringing about the settlement of any grievances."

The strike was settled on Thursday. The members of the Municipal Employees' Association who comprised the strikers agreed to resume work forthwith pending arbitration, with the proviso that they will be reinstated, the Tramways Committee undertaking that the manager or deputy-manager would receive any official of the association with respect to any *bona fide* complaint.

## REDUCTION IN TRAMWAY SERVICES.

At a recent meeting at Doncaster Town Council considerable reduction in the tramway service was decided upon. Councillor Balmforth said that the action had been forced upon them by the Board of Trade in order to economise in the consumption of coal, and he anticipated there would have to be further reductions in the service.

The Gateshead and District Tramways Company have considerably reduced the number of stopping places. South Shields Tramways Committee have also decided to reduce the number of stopping places.

It is proposed to curtail the Glasgow tramway service by about an hour in the evening owing to about a hundred motor men being called up for military service.

Excluding a section, on which no changes have been made, there are now 46 stopping places on the Northampton tramway system as against 62 prior to recent reductions.

There appears to be considerable dissatisfaction felt in Poole with the action of the Bournemouth Corporation in discontinuing the Sunday service of cars, and the Poole Town Council is making representations to the Bournemouth Corporation with a view to its restoration.

## L.C.C. TRAMWAY MATTERS.

At the meeting of the L.C.C. on Tuesday, the principal tramway business related to the question of fares.

The General Purposes Committee recommended that, except as regards workmen's fares, the fares on the Council's tramways' shall be based on a division of the system into sections, three sections to be traversed for a 1d. fare, six sections for a 2d. fare, and nine sections for a 3d. fare, and the maximum fare shall be 4d.; these fares shall apply only in the case of a continuous journey on one tramcar; and the average length of a 1d fare stage shall be 1·8 miles. Workmen's fares on the Council's tramways shall be as follows—1d. single fare for four consecutive sections on one car; 2d. single fare for any distance on one car, with transfers as given up to 7th May, 1918, for 1d. single fare; 2d. return fare for a journey in each direction over four consecutive sections on one car, both journeys being made over the same sections; 3d. return fare for any distances on one car, with transfers as given up to 7th May, 1918, for a 2d. return fare; the division of the Woolwich route into sections as existing on 7th May, 1918 was not to be affected.

TENDERS INVITED.

A recommendation of the Highways Committee to invite tenders from selected firms for the supply of field coils, machined bronze bearings, armature coils, plough carrier brackets, magnetic brake coils and commutators for use in the tramways department was approved.

SUPPLY OF MUNITIONS.

The receipt was reported of a letter, addressed to the general manager, stating that the Metropolitan Munitions Committee is being dissolved, and that all questions relating to the output of munitions will be dealt with by the Ministry of Munitions, and concluding with an expression of the Board's warm thanks "not only for the manner in which the Council has executed the various contracts entrusted to it, but also for the readiness with which in the national interest the Council has at all times responded to the Board's urgent call for munitions of war."

MUNICIPAL TRAMWAYS CONFERENCE.

The General Purposes Committee reported concurrence—on the understanding that the Council was thereby in no way committed as to its policy—in the proposals of the Highways Committee that the chairman and vice-chairman of the Committee and the general manager should attend a conference convened by the Municipal Tramways Association. The General Purposes Committee had also concurred in the chairman and vice-chairman of the Highways Committee and the general manager attending a meeting of the Advisory Committee for area No. 1 (as determined by the Tramways (Board of Trade) Committee), for the purpose of electing a corporation representative to the Tramway Conference Executive.

SUBSIDIES TO MOTOR OMNIBUS COMPANIES.

Lord Haddo asked the Highways Committee whether anything further had been done in regard to the subsidies paid to the motor omnibus companies for services in S.E. London; what was the amount of the subsidy, what was the contract mileage, and when did the Committee intend to report on the matter?

Mr. G. H. Hume replied that a meeting of representatives of municipal tramway undertakings in the Metropolitan area was held at the County Hall, on the 5th inst., when a committee was appointed to investigate the matter as far as tramways were concerned. Upon the completion of the investigation, a recommendation would be made as to the action to be taken. The amount of the subsidy paid to June 30, 1917, was £44,312, but the contract mileage had not been disclosed. The investigations were still going on.

Lord Haddo also asked if any steps had been taken to use women drivers on tramcars in accordance with the sanction given by the Commissioner of Police.

Mr. Hume replied that the introduction of women as drivers had been retarded pending the completion of negotiations between the Ministry of National Service and the Trade Unions concerned.

## INCREASED FARES.

The Wemyss Tramway Company recently increased fares by 100, per cent. in some cases. The miners travelling to work have had workmen's rates in the morning, but in the evening they have been required to pay the ordinary fares. The miners regard this as a grievance and they also complain of a diminution in the number of stopping places. They have drawn the Coal Controllers' attention to the fact that owing to what they describe as an inadequate service of cars to the pits in the morning a serious loss of output must result. The miners have threatened to cease work on Monday, July 29, if by that date the Board of Trade have not intervened.

From a statement made to the Darlington Town Council by Alderman Sir C. Starmer, chairman of the Tramway Committee, it appears that on the increase of the fares, the number of passengers carried fell from 112,851 to under 96,000 in the first week, but rose by about 2,000 per week in each of the two following weeks. The increases in the takings were approximately £8 to £21 for the three weeks

The Halifax Town Council approved a proposed increase of fares.

**Fish Traffic on Tramways.**—The Scarborough Tramways Corporation proposes to carry fish on the tramways from the piers to the goods station, and assistance is to be sought from the Government towards the cost of laying the additional track.

## INCREASE OF STATUTORY CHARGES.

The Statutory Undertakings (Temporary Increase of Charges) Bill, the text of which was given in our issue of July 6, and previously explained, provides for tramway and other statutory undertakings increasing till two years after the war, their charges above the statutory maxima. It came up in the House of Commons on July 8. Mr. Wardle, Parliamentary Secretary to the Board of Trade, in moving the second reading, said that the Bill had been framed to give effect to recommendations by Select Committees of the House appointed to consider the case of gas and tramway undertakings whose financial position had been adversely affected by circumstances arising out of the war. The Bill also applied to electricity and water undertakings as the conditions were very similar. Expenses had increased, and various restrictions had been rendered necessary. Considerable discussion took place on the motion, but it referred almost entirely to the gas companies' case. The Bill was read a second time, and in due course will come before Committee of the whole House.

The Tramways and Light Railways Association is by no means satisfied with the Bill and is pressing for its amendment. The report of the Select Committee on Tramways contains no recommendation as to the limit of half the pre-war rate of dividends. Yet the Bill contains that proviso which was proposed in the report of the Select Committee on gas undertakings. Tramways have no sliding scale or standard profits like the gas companies. Again, the undertakings of tramway companies have a limited tenure and are liable to be purchased by the local authorities. Consequently they have no assurance that they will be able to recover the present loss in the future. It seems unfortunate that the question of the increase in tramway fares was not dealt with by a separate Bill, as the conditions of the gas and water undertakings differ so largely from those of tramways.

## MISCELLANEOUS NEWS AND NOTES.

**Tramways as Carriers.**—The Bradford Corporation Tramways Committee is considering the possibility of using the tramway system for the carriage of goods at night.

**Influenza Reduces Northampton Service.**—Influenza has enforced a further reduction of the Northampton tramways service. The interval between cars has been increased from six to seven minutes.

**Compensation for Damage to a Tramway Car.**—The Glasgow Corporation has obtained £130 damages and expenses in settlement of an action against the owners of a steam waggon which ran into and damaged one of the Corporation's tramcars.

**Canada Prohibits Export of Tires.**—The Board of Trade Journal reports that Canada has prohibited the exportation of all tires containing rubber, except under license issued by the Customs on the approval of the Canadian War Trade Board.

**For Wounded Soldiers.**—A writer in the *Liverpool Courier*, referring to the crowded state of the tramcars on one of the routes to Liverpool, suggests that an occasional car might be reserved for the use of wounded soldiers, particularly during the holiday season.

**Increased Delivery of Goods.**—The Aberdeen Corporation Tramways Committee is proposing to extend the present facilities for carrying parcels to include the delivery of bread and meat from shops by means of messengers who would leave the cars at certain points.

**First Aid Instruction** is now being given to women conductors of the London General Omnibus Company. Such instruction has previously been given to men only, but it has been found women conductors can be relied upon to make effective use of similar training.

**Fines for Non-Payment of Fare.**—At Ashton, two women charged with travelling on an Ashton Corporation tramcar on June 16, without paying their fare, were fined 35s. Although the conductor repeatedly asked if the passengers had paid their fare, the defendants made no offer to tender the amount.

**Railless Car as Kitchen.**—The Food Committee has made arrangements with the Halifax Tramways Committee to equip a railless car as a travelling kitchen at a cost of £252. It will be remembered that the Corporation recently fitted up a tramway car as a kitchen and that it has been in successful use for several weeks.

**Rule of the Footpath.**—In his annual report the General Manager of Burnley Corporation Tramways mentions that during the year the suggestion made by the General Manager of Glasgow Corporation Tramways at the Municipal Tramway Conference in October last, that pedestrians should use the left hand side instead of the right of the footpaths, has been adopted at Burnley.

**Sheffield Auxiliary Drivers.**—At a meeting of the Sheffield Tramway and Vehicle Workers' Association one of the principal subjects discussed was that of the auxiliary drivers. The opinion was expressed that some of the auxiliary drivers were coming to tramway work in order to evade military service. It was unanimously resolved to request the management to employ no men in Grade I. as auxiliary drivers.

**Edinburgh-Queensferry Tramways.**—Strong popular support is being given to the scheme of the Edinburgh Corporation for the construction of electric tramways to Queensferry. A number of open air meetings have been held at which the proposals have been explained by labour members of the Council and resolutions have been passed in favour of the proposals. Resolutions favouring the scheme have also been forwarded to the Town Council from 24 organisations.

**Lincoln City Council** are about to purchase and enlarge the electric power station of Messrs. Clayton and Shuttleworth and they have invited Sir John Snell to carry out the scheme. The extension will involve, with the purchase of St. Swithin's power house, an expenditure of £190,000 or £240,000, dependent on the amount of power to be taken by Messrs. Ruston, Proctor and Company.

**Norwich Tramways Company Win on Appeal.**—The appeal of the National Service representative on the exemption of the chief cashier and ticket clerk of the tramway company, was discussed by the Norwich Tribunal last week. It was stated on behalf of the men's employers that he had been eighteen years with the company, had been responsible since 1906 for all takings and the issue of tickets, and prepared all the office returns. A substitute could not be found.

**Increase in the Price of Coal.**—The Board of Trade has made an order providing for an increase of 1s. 6d. per ton in the price of all coal dispatched from the colliery for consumption in the United Kingdom, on and after Monday, July 8th, to meet the cost of the increased war wages recently granted to the miners. The price of coal had already been raised by 2s. 6d. per ton on June 24th. On June 28th an advance of 1s. 6d. a day was granted to miners over 16 years old, and 9d. a day to those under 16.

**Attempt to Stop Cars at Glasgow on Sunday.**—Discreditable scenes took place arising out of the demonstration of the sympathisers with John MacLean, the "Bolshevik Consul" of Glasgow, who is serving a sentence in Peterhead Prison for making inflammatory speeches. On their way the processionists attempted to stop the car services on the route. Young men jumped on to the platforms of the cars and attempted to drag the drivers and women conductors off. The public assisted the police to restore order.

**Gas-Driven Omnibuses for London.**—It has been announced that the Commissioner of Police has, after long consideration, approved of the issue of licenses for 20 of the motor omnibuses of the London General Omnibus Company to be fitted with apparatus to enable them to be worked by compressed coal gas. Twenty goods-carrying vehicles similarly equipped will also be tried. The gas will be carried in rigid metal cylinders, and it has been proved to the satisfaction of the police that the use of gas is perfectly safe.

**Collection of Fares.**—At a recent meeting of the Belfast Corporation it was alleged that considerable revenue was being lost to the municipal tramways owing to neglect to collect all the fares. Councillor W. Turner, the chairman of the Tramways Committee, urged that the public ought to help the conductor in this matter and hoped that an example would be made of some of the people who deliberately neglected to pay their fares. Criticism of alleged insufficient collection of fares has also been made at York City Council.

**Registration of Road Transport Vehicles.**—The Road Transport Order, 1916, made by the Board of Trade, comes into operation on July 31. Under this Order all owners of goods carrying vehicles are required to furnish particlars of their vehicles on the prescribed forms before July 31, 1918. The order applies to all vehicles driven by motor spirit, gas, electricity or steam, and to horse-drawn vehicles with a capacity of not less than 15 cwt., with the exception of those vehicles used wholly or mainly in agriculture. The forms can be obtained at the nearest police station to where the vehicles are usually kept.

**Life Guard Could Not Act.**—At an inquest at Mansfield last week upon a three year old child, it was stated that the deceased ran to cross the road in front of a tramcar and fell between the gate and the lifeguard, so that the lifeguard could not drop. The car was being driven by a man, aged 28, a learner, who was being instructed by a woman, who had been tramcar driving for two years. A suggestion was made that at the moment of the accident a biscuit was being handed from one to the other; but this was denied. The woman said that had she been driving she might have been able to prevent the accident. The jury returned a verdict of "Accidental death."

**Brisbane Tramways.**—The Queensland Government have decided to reintroduce the two bills for the purchase and working of the undertaking of the Brisbane Electric Tramways Co. These bills provide for compulsory reduction in fares so that the profits of the company shall be restricted to not more than 5 per cent. on the value of the tramways. The undertaking is subject to purchase by the Government after Sept. 20, 1929 (under the Act of 1882), and according to legal opinion the purchase terms must be arrived at on the basis of the commercial value of the undertaking as a going concern, the profits being the basis of the valuation. If the fares, and consequently the profits, are reduced meanwhile, the value of the property will be so much less when the time arrives for the Government to purchase the undertaking.

**Edinburgh Tramway Management.**—The Tramways Committee at a meeting last week received a report from the Sub-Committee to whom the applications for the post of manager of the Corporation tramways had been submitted. The Committee reported that they had interviewed four gentlemen, namely, Messrs. W. Clough, General Manager, Bury Corporation Tramways; W. J. McCombe, Tramway Manager, Hull Corporation Tramways; R. Stuart Pilcher, General Manager, Aberdeen Corporation Tramways; and R. W. Wilkinson, General Manager, Huddersfield Corporation Tramways. The Chairman, Councillor Harrison, proposed that decision should be made by the Sub Committee, but after discussion it was agreed that the matter should be recommitted to the Sub-Committee, with instructions to submit two names to the Committee. Subsequently the names of Mr. Clough and Mr. Pilcher were selected. It is expected the appointment will be made next week.

## PERSONAL

**Mr. W. J. Roycroft** has been elected Chairman of the new Committee of Management of the Schull and Skibbereen Tramway.

**Mr. L. P. Wilmhurst,** electrical engineer of Derby Corporation, has been granted an increase in salary from £730 to £950.

**Mr. F. Harding,** manager of Derby Corporation Tramways, has been granted an increase in salary from £380 to £430.

**Mr. H. Vorley,** accountant in the London County Council Tramways Department, has been granted a sum of £60 as extra duty pay in recognition of special services rendered during 1917.

**Mr. Hopkin Morgan,** electrical engineer of the Port Talbot Railway and Docks Company, has been appointed district engineer for the purpose of conducting enquiries on behalf of the Coal Mines Department in connection with the economical use of coal.

**Mr. J. D. R. Cox,** General Manager of the Edinburgh and District Tramways Company, has been appointed by the Board of Trade Coal Management Department as district engineer in connection with the coal economy campaign. He will still continue his duties as manager of the tramways.

**Glasgow Tramway Committee's** proposals for increases in the salaries of several officers have been approved. The increases are as follow:—Mr. J. Dalrymple, General Manager, from £1,300 to £1,500 per annum; Mr. L. Mackinnon, Traffic Superintendent, £700 to £750; Mr. J. Ferguson, Chief Engineer, £700 to £750.

## FINANCIAL REPORTS AND MEETINGS.

**Lima Light, Power and Tramways.**—A dividend of 10 per cent. is announced.

**Clontarf and Hill of Howth Tramroad Company.**—An interim dividend of 3s. per share has been declared.

**Dublin United Tramways.**—A dividend of 4 per cent. per annum. less tax, on ordinary stock for half-year (interim) payable August 5. Last year the dividend was the same.

**Underground Electric Railways.**—Interest on the six per cent. First Cumulative Income Debenture stock will be paid on August 31st., less tax, at 3 per cent., and coupon No. 21 off the Six per Cent. Income bonds will be paid, free of tax, at 2 per cent. on 2nd September next.

**London General Omnibus Company.**—An interim dividend for the half-year ended 30th June of 4 per cent., free of tax, on the Ordinary shares has been declared.

**London Electric Railway.**—Dividends of 2 per cent. on the Four per Cent. Preference stock and ¾ per cent. on the Ordinary for the half-year ended 30th June are announced

**Central London Railway.**—An interim dividend of 1¾ per cent. on the undivided Ordinary shares and 2 per cent. on the Preferred Ordinary for the six months ended 30th June is announced.

**Metropolitan District Railway.**—Interim dividends of 2 per cent. on the Guaranteed stock, 2¼ per cent. on the First Preference and 1¼ per cent. on the Five per Cent. second Preference are announced.

**City and South London Railway.**—Interim dividends on the Five per Cent. Preference stocks 1891, 1896, 1901 and 1903, of 2½ per cent. and on the Consolidated Ordinary stocks of ¾ per cent. have been declared.

**Gloucester Railway Carriage and Wagon Company.**—A dividend at the rate of 10 per cent. for the half year to May 31 last, making 10 per cent. for the year less income tax, and also a bonus of 5 per cent., free of income tax, are recommended.

**Brighton Corporation Tramways.**—During the first quarter of the current financial year, there was an increase of £4,018 in revenue as compared with the corresponding period in the previous year, which showed an excess of about £3,000 over the same period in 1916.

**Walsall Corporation Tramways.**—The net profit on the Walsall Corporation Tramways for the year ended May 25, 1918, amounted to £16,316, including the profits on the motor omnibuses. Alderman Cope, at a meeting of the Council on July 7, said that owing to war bonuses out of every £1 received in passengers' fares they were paying 5s. 11d. in wages.

**Henley's Tyre and Rubber Company** was registered as a private company on July 5th, with a capital of £200,000, in £1 shares, to take over the tire department of the business of W. T. Henley's Telegraph Works Company, Ltd., with the premises where the same is carried on, and to carry on the business of manufacturers of and dealers in wheels, rims, tires, rubber, golf and other balls, etc. The first directors are Messrs. G. Sutton, M. Roberts and A. E. Salmon. The registered office is at 18, New Union Street, E.C.

**Bradford Corporation Tramways.**—The accounts for a year just presented show that the traffic income amounted to £366,496, an increase of £40,090, representing 15·80d. per car mile, compared with 13·67d. in the previous year. Traffic expenses amounted to £115,800, against £99,700, the principal item being increase of wages in the shape of war bonus, which amounted to £28,000. The war bonus (£47,000) considerably influenced the cost of maintenance and repairs, which showed a rise from £46,500 to £64,700, the maintenance of permanent way accounting for £8,600, and of cars for £9,000, of the increase. Allowances to dependents of employees who have joined the forces amounted to £22,200—an increase of £7,900. Apart from its feeding value to the remainder of the undertaking, the railless system showed a deficit of £2,700, as against £3,170. The gross profit amounts to £87,180, and after payment of interest and sinking fund there is a net profit of £31,376, compared with £30,802. After carrying forward the balance of the profit for the past year the reserve and renewals account now stands at £111,048.

**West Hartlepool Corporation Tramways.**—The accounts for the year ended May 25, 1918, show a gross profit of £10,221. After paying for the lease of the Hartlepool line, interest on loans, contributions to sinking fund, and repayment of mortgage loans, there remains a balance of £4,662 7s. 4d. to add to the reserve or renewals fund, which now stands at £12,508 10s.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended July 10, amounted to £66,440, an increase of £10,766 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to July 10 (fourteen and a half weeks), the total receipts were £897,034, an increase of £104,152 on the corresponding period of 1917.

**Burnley Corporation Tramways.**—In his 17th annual report covering the year ended March 31 last, Mr. Henry Mozley, general manager of Burnley Corporation Tramways, says that considering the effect of war conditions and the strikes which occurred during the year the results were not unsatisfactory. A strike in July, which lasted eight days, caused a loss of £2,600 in traffic receipts and £1,300 in net receipts. This strike was the first experienced in Burnley, and was caused by differences between two trade unions and was ultimately referred to arbitration. Another strike in November, of fitters, turners, etc., affecting two local organisations on the question of 12½ per cent. war bonus, lasted four days, and entailed an estimated loss in traffic receipts of £60. A third strike took place on Christmas Day at the order of the Amalgamated Association of Tramway and Vehicle Workers, when no cars were run, and the loss caused thus amounted to £400 in traffic receipts, and £293 in net receipts. Notwithstanding these losses the net receipts for the year were £6,389 1s. 6d., an increase of £1,166 15s. 10d. The total revenue from traffic was £96,967, an increase of £9,928. Owing to additions to wages by war bonuses and the enhanced cost of material, working expenses increased heavily and amounted to £70,195 as compared with £61,815 in the previous year. The average working expenses per car mile were 10·64d., an increase of 1·56d., which was due to higher charges for energy made by the Electricity Committee, and to less experienced drivers. The following is a brief summary of the results for the year compared with four previous years:—

| Year ended March 31. | 1918. | 1917. | 1916. | 1915. | 1914. |
|---|---|---|---|---|---|
| | £ | £ | £ | £ | £ |

**Wanted.**—Copies of the TRAMWAY AND RAILWAY WORLD, Volume XXXIX, No. 1 (January 1, 1916), to complete files for binding.—Reply to Box, 24, THE TRAMWAY AND RAILWAY WORLD, Amberley House, Norfolk Street, London, W.C.2.

Digitized by Google

## CONTRACTS AND ORDERS.

**The General Vehicle Company** are to supply two 3½-ton electric vehicles to Ilford Urban Council.

**Sheffield Electricity Department** have ordered two British-built chassis from Edison Accumulators, Ltd.

**Bradford Corporation** has accepted a tender from C. A. Parsons and Company for a 12,000 kw. turbo-generator.

**The Vacuum Oil Company** are supplying 700 gallons of transformer oil to Walsall Electricity Department.

**Salford Tramways Committee** have ordered from Hadfields, Ltd., four pairs of manganese points and twelve manganese crossings at £695.

**British Westinghouse Electric and Manufacturing Company's** tender has been accepted by Newcastle-under-Lyme Corporation for a 150 k.w. rotary converter with high and low tension switch for £2,160 15s.

**The L.C.C. Highways Committee** have been authorised to invite tenders for the supply of field coils, machined bronze bearings, armature coils, plough carrier brackets, magnetic brake coils and accumulators for use in the tramways department.

**Leyton Urban Council** recently ordered two electric motor vans from Edison Accumulators, Ltd., and that company now offers British-built chassis at 5 per cent. over the original quotations in order to meet an objection to the importation of their chassis from America.

## BUSINESS NOTICES.

**Commercial Cars, Ltd.,** have removed their London headquarters from Parkhurst Road, N., to larger premises at 112a, Junction Road, Upper Holloway, N.19. Their telephone number is now Hornsey 2212.

**Meldrum, Ltd.,** Timperley, Manchester, have issued pamphlets giving particulars of their combustion appliances and of the castings and apparatus supplied by them for chemical works.

**Wanted.**—Copies of the TRAMWAY AND RAILWAY WORLD of January 1 and 13, 1916; March 9, 1916; April 13, 1916; May 11, 1916; June 8, 1916; October 9, 1916; August 16, 1917; and October 18, 1917.—Reply to Box 12, The TRAMWAY AND RAILWAY WORLD. Amberley House, Norfolk Street, London W.C.2

# TRAMWAY TRACK CONSTRUCTION AND MAINTENANCE.

By R. BICKERSTAFFE HOLT,
Highways and Permanent Way Engineer, City of Leeds

CONTENTS:

FOREWORD.
What's wrong with the Track?"

CHAPTER I.—CONCRETE FOUNDATIONS.
Defects—Causes of fracture—Method of laying concrete

CHAPTER II.—CONCRETE MATERIALS.
Road metal—Water-gravel—Sand—Clinker-sand—Trass.

CHAPTER III.—REPAIRS TO CONCRETE FOUNDATIONS.
Patching—Partial repairs—Complete renewal.

CHAPTER IV.—TRACK DESIGN.
"Follow my leader" policy—Importance of local conditions—Effect on sub-soil—Standard methods—Transverse sleeper tracks—Effect of vehicular traffic and tramway car traffic.

CHAPTER V.—RAIL PACKING.
Pitch and tar packing—Materials—Testing and preparation of materials—Prepared tar—Pitch mixtures—Movement of rails—Packing and floating.

CHAPTER VI.—RAIL LAYING.
Bad rail packing—Rails canted or twisted—Anchoring and Padding—Rail expansion and contraction—Curving of rails—Springing of rails—Anchoring tracks.

CHAPTER VII.—JOINTS, FISH PLATES, BOLTS AND NUTS
Why joints fail—Dished or hammered joints—Movement at joints.

CHAPTER VIII.—JOINT WELDING.
Methods of welding—Thermit welding—Electric arc welding process—Expansion and contraction—Oxy-acetylene process.

CHAPTER IX.—RAIL WEAR.
At joints—On new tracks—On steep gradients—On wheel tires—Contact of wheel and tire—Leeds special rail section—Railway rails—Depression of check.

CHAPTER X.—COMPOSITION AND MANUFACTURE OF TRAMWAY RAILS AND RAIL WEAR.
Defective rails—Composition of rails—Standard specification—Basic and acid Bessemer process—Sandberg process—Analysis of rails and rail tests—Drop test unnecessary.

CHAPTER XI.—CORROSION OF TRAMWAY RAILS.
Causes of rail corrosion—Exposure to sea water—Effect of corrosive liquid.

CHAPTER XII.—TRACK PAVING.
Effect of vehicular traffic—Cause of loose rails—Importance of quality in setts—Square-dressed setts—Nidged granite setts—Bonawe granite setts—Wood paving—Bedding of setts—Laying and ramming.

CHAPTER XIII.—RECONSTRUCTION
Removal of tracks—Temporary tracks.

CHAPTER XIV—SURFACE DRAINAGE AND RAIL MAINTENANCE.
Rail cleaning—Rail grinding—Rail planing.

CHAPTER XV—SPECIAL TRACK WORK.
Design and standardisation of points—Unbroken main line crossings—Renewable plates—Switches—Mechanism for movable points—Heel pins—Tongue heel adjusters—Guard rails—Spiral tables for curves and junctions—Special track problems.

**250 pages, 10 × 6½ × 1 in., with over 150 illustrations.**

Price 10s. 6d.

## THE AUTOBUS
### IN THE TRAMWAY WORLD.

Motor Traffic Section.

When "The Tramway and Railway World" was founded in 1892, motor traction was, of course, scarcely dreamt of, but the avowed object of the paper was to encourage all new methods that gave promise of usefulness.

In pursuance of that policy the progress of motor traction received early attention. Commenting on the historic motor parade to Brighton in 1896, "The Tramway and Railway World" predicted that

"It would give a prodigious impulse to transport both by road and rail."

Within a decade this prophecy was abundantly fulfilled and so much space had been devoted to the new industry that in 1906 a special

**MOTOR TRAFFIC SECTION**

was added. Every illustrated issue thus contains a section devoted especially to motor cars for Public Service, and includes articles on current topics, illustrated descriptions of new types of vehicles and accessories, and the latest news.

Public Service Motor Cars.

The importance of this section will be gathered from the fact that an increasing number of the leading municipal authorities, railway and transport companies now own and operate large fleets of motor vehicles, including omnibuses, chars-a-bancs, motor lorries, for the transport of goods, parcel delivery vans, tower wagons, motor street sweepers, and a variety of other types.

THE

# Tramway & Railway World

Vol. XLIV. No. 4] LONDON, SATURDAY, JULY 20, 1918. [Established in 1892.

ANNUAL SUBSCRIPTION (Postage Prepaid)—In the United Kingdom, 25s.; for all places abroad, 30s.

Including sixty-four issues, of which twelve are large illustrated numbers, printed on fine art paper

## NOTICES.

**All Communications and Advertisements for next week's issue should be received not later than noon on Friday.**

**Advertisements for the next issue, of which proof is desired, should reach us by the second post on Wednesday.**

**The Editorial and Publishing Offices of "The Tramway and Railway World" are at Amberley House, Norfolk Street, London, W.C.2.**

**Telegrams: "TRAMIGRO, ESTRAND, LONDON."**
**Telephone: GERRARD 2948.**

## WEEKLY LIST OF TENDERS INVITED.

### CITY OF BELFAST.

**Electricity Department.**

The Belfast Corporation invite Tenders for the manufacture, delivery and erection in Belfast of the undermentioned Plant, viz.:—

SECTION A.
(a) Two 6,000 KW. Turbo-alternators, etc.
(b) One 500 KW. Turbo-generator, etc.
(c) One 30 KW. Balance-booster, etc.

SECTION B.
(a) Four 48,000 lb. per hour Water-tube Boilers, etc.
(b) Four Fuel Economisers, etc.
(c) Two steel Chimneys, with fans, etc.

SECTION C.
Two electrically-driven Boiler Feed Pumps, etc.

SECTION D.
Accumulators.

SECTION E.
Three 500 KW. and five 1,000 KW. Rotary Converters, with transformers, etc.

SECTION F.
Two 250 K.V.A., two 350 K.V.A., and six 1,250 K.V.A. Static Transformers.

Tenders will be considered for either of the main sections, or for either of the sub-sections.

The Specifications and other particulars may be obtained on application either to Messrs. PREECE, CARDEW, SNELL AND RIDER, 8, Queen Anne's Gate, Westminster, S.W.1, or to Mr T. W. BLOXAM, M.I.E.E., City Electrical Engineer, Belfast.

Tenders, upon the presented forms, must be lodged in the Town Clerk's Office, City Hall, Belfast, not later than 16th August, 1918.

The lowest or any Tender will not necessarily be accepted.

An official receipt must be obtained for every Tender delivered by hand. Tenders sent by post must be registered.

R. MEYER, Town Clerk.

### WALTHAMSTOW URBAN DISTRICT COUNCIL.

**To Uniform Contractors.**

The Walthamstow Urban District Council invite tenders for the supply of Overcoats and Waterproofs for their Women Conductors for the period ending 31st March, 1919.

Forms of Tender and further particulars may be obtained from Mr. W. Murray, A.I.E.E., Tramways Manager, Tramway Offices, Chingford Road, Walthamstow.

Sealed Tenders, endorsed "Tender for Women Conductors' Overcoats, etc.", to be delivered by post only to the undersigned not later than 5 o'clock p.m., on Wednesday, the 31st day of July, 1918.

The Council do not bind themselves to accept the lowest or any tender, and reserve to themselves the right to accept the whole or any part of a tender.

The Contractors will be required to pay the whole of their workmen such rates of wages and observe such hours of labour as are recognised by the various Trade Unions and in force at the time of signing the contract.

C. SYDNEY WATSON,
Clerk to the Council.

Town Hall, Walthamstow.
15th July, 1918.

### DUBLIN CORPORATION.

**Cleansing Committee.**

**Tenders for Tramway Wagon Wheels.**

The Cleansing Committee of the Dublin Corporation are desirous of obtaining tenders for the supply of wheels for use in connection with their tramway refuse wagons.

Full particulars, including specifications, conditions of contract, drawings, etc., can be obtained at the undermentioned office on payment of the sum of 10s. 6d., which sum will be refunded on receipt of a bona-fide tender.

The acceptance of a tender will be subject to ratification by the Municipal Council, but the Committee do not bind themselves to accept the lowest or any tender.

Sealed tenders, marked on the outside "Tender for Wheels," and addressed to "The Chairman, Corporation Cleansing Committee, Lord Edward Street, Dublin," to be forwarded so as to reach the offices of the Committee not later than 12 o'clock noon, on Tuesday, the 23rd day of July, 1918.

FRED. J. ALLAN,
Secretary.

Cleansing Committee's Offices,
Lord Edward Street, Dublin,
11th day of July, 1918.

## POSITIONS VACANT.

**Ticket Inspectors.**

Two smart Ticket Inspectors wanted. Men with experience as Ticket Clerks or Conductors will be considered. Age 25 to 40. Wages 45s. Permanent position to suitable men. Apply, Tramway Company, Oxford.

**ARMATURE WINDER.**

Wanted, an Armature Winder; must be ineligible for Military Service; good wages to suitable man.—Reply, giving particulars of training, experience, and age, to Box 57, THE TRAMWAY AND RAILWAY WORLD, Amberley House, Norfolk Street, London, W.C.2.

MANCHESTER MUNICIPAL

## COLLEGE OF TECHNOLOGY.

(UNIVERSITY OF MANCHESTER).

Principal: J. C. M. GARNETT, M.A. (late Fellow Trin. Coll. Cam.).
Vice-Principal: E. M. WRONG, M.A. (Fellow Magdalen Coll., Oxford).
The Session 1918-1919 will open on 3rd OCTOBER. Matriculation and Entrance Examinations will be held in July and September. Matriculated students may enrol for 1918-19 from 1st August, 1918, and if under 18 years of age are eligible for membership of the Officers' Training Corps.

DEGREE COURSES IN TECHNOLOGY.

The Prospectus gives particulars of the Courses leading to the Manchester University Degrees (B.Sc. Tech. and M.Sc. Tech.), in the Faculty of Technology, in the following Departments:—

MECHANICAL ENGINEERING (Prof. G. G. Stoney, F.R.S.).
ELECTRICAL ENGINEERING (Prof. Miles Walker, M.A.).
SANITARY ENGINEERING (including Municipal Engineering).
THE CHEMICAL INDUSTRIES (including General Chemical Technology, Bleaching, Dyeing and Dyestuff Manufacture, Printing, Papermaking, Fermentation Industries, Metallurgy, Fuels).
TEXTILE INDUSTRIES, MINING, ARCHITECTURE,
PRINTING AND PHOTOGRAPHIC TECHNOLOGY.

ADVANCED STUDY AND RESEARCH.

The College possesses extensive laboratories and workshops, equipped with full-sized modern apparatus, including machines specially constructed for demonstration and original research.

PROSPECTUS OF UNIVERSITY COURSES OR OF PART-TIME COURSES SENT FREE ON APPLICATION.

SATURDAY, JULY 20, 1918.

## THE TRAMWAY OUTLOOK.

THE annual meeting of the Tramways and Light Railways Association reflected the conditions of the times. There was a comparatively small attendance and no papers were read. Several subjects of importance to the industry were discussed, and the exigencies of the present situation were considered from various points of view. Tramway managers in these days are always in difficulties, and the present outlook does not inspire much cheerfulness. As regards fares, labour questions and supplies, nothing very hopeful can be said. Whether any relief can be looked for from the Statutory Undertakings (Temporary Increase of Charges) Bill, is becoming more doubtful. Possibly amendments suggested by the Council of the Association may be secured, but speakers at the meeting were not optimistic. At the best, little help can be expected during the summer. One fact emerged that caused some surprise was that the Bill had not been drawn up with the aid of the Tramways (Board of Trade) Committee. Apparently it was the original intention to deal with tramway fares in a separate bill, but this plan seems to have been hastily abandoned, and tramways and quite differently circumstanced undertakings were grouped together with results that will give rise to considerable difficulties when the Bill comes to the report stage next week. As regards labour, the outlook is rather more encouraging. Plans for the setting up of a Whitley Council for the whole of the tramway industry are making good progress, and within a few months the scheme should be in full operation. It is an experiment that promises to introduce a new relation between employers and employees, and if only a par of the benefits anticipated are realised, managers' difficulties will be sensibly diminished. Much will depend on the spirit in which both sides enter upon the new arrangement. As regards reduction of tramway services the prospects, as was indicated by several speakers, are not encouraging. Coal must be saved, and the Tramway Committee can only endeavour to deal with the demands as fairly as possible. There are undoubtedly difficult times before the industry, but the successful way in which tramway undertakings have come through the past four years should be an encourgement to all concerned. Even more exacting requirements will be cheerfully met if they are found necessary in the national interests.

## TRAMWAYS AND LIGHT RAILWAYS ASSOCIATION ANNUAL MEETING.

The twenty-first annual meeting of the Tramways and Light Railways Association was held at Caxton Hall, Westminster, on Friday, June 12. Pending the arrival of the President (the Rt. Hon. Viscount Chilston), and in the absence through illness of the Chairman of the Council (the Rt. Hon. Sir Arthur Stanley, O.B.E., M.P.), the chair was taken by Mr. R. J. Howley, the Vice-Chairman, who expressed regret at Sir A. Stanley's absence.

The Secretary read Sir Arthur Stanley's address, which showed that financially the Association was in a satisfactory condition. Reviewing the work of the year, Sir Arthur Stanley said the outstanding event was the setting up of the Tramways (Board of Trade) Committee. They had ample ground for congratulation in the fact that their colleague, Mr. James Devonshire, had been appointed chairman of that Committee by the Board of Trade. Everyone who knew Mr. Devonshire was agreed that no better choice could have been made. Two representatives of the Association had been appointed on the Committee—namely, Mr. Stephen Sellon and Mr. Howley, their very active Vice-Chairman. Both had given a great deal of their valuable time to the strenuous and anxious work required. Owing to increased costs, the position of many of the smaller undertakings had become increasingly precarious, and so far back as 1916 steps had been taken with a view to obtaining relief. A Select Committee of the House of Commons was appointed by the President of the Board of Trade to go into the matter, and exhaustive evidence was given by both tramway associations as to the necessity for an increase in the statutory maximum fares. He feared that their hope of relief had been somewhat premature, as the Bill which had now been introduced dealt with gas, water, electricity and tramways, and its provisions as they stood were inapplicable to tramways generally. It was a severe disappointment to them, but they must continue their efforts with a view to amending the Bill so as to secure what benefits they could for their members.

As regards the Whitley Report, they were among the first to consider the proposals in conjunction with their municipal friends. A number of conferences had been held with the men's unions and representatives of the Ministry of Labour. A draft scheme for setting up a national council was all but completed, and would be submitted for their approval before long. Other important subjects were dealt with during the year. In the near future they would have to devote some attention to the supply of tramway materials after the war, the report of the Board of Trade Committee on electric power supply, and many other matters.

The accounts and balance-sheet were approved and passed.

After some discussion a ballot was taken for the election of new members to the Council, and the following were selected :—Mr. S. E. Baker, Director, Bristol Tramways and Carriage Co. ; Mr. H. England, General Manager, Yorkshire (West Riding) Electric Tramways Co. ; Major F. Coutts, General Manager, Paisley District Tramways Co. ; Mr. E. H. Edwardes, General Manager, Lancashire United Tramways, Ltd. ; Mr. A. L. C. Fell, General Manager, London County Council Tramways ; Councillor Mayne, Chairman, Newcastle Corporation Tramways Committee.

Col. A. W. Chambers, retiring Hon. Auditor, was reappointed, and received the thanks of the Association for his services.

No papers were presented at the Congress, which followed the annual meeting, but a discussion took place on Increased Wages, National Industrials Councils, Increased Fares, Restrictions of Coal Consumption, and the Supply of Materials after the War.

In opening the discussion the Chairman (Mr. R. J. Howley) dealt with the recent wages award and the circumstances that had led up to it.

Mr. Hatton urged the importance of considering the question of wages in the tramway industry after the War, and advocated a basic wage for employees which would rise or fall according to the prosperity or otherwise of the industry.—Mr. Cox (Edinburgh Tramways) regretted that there did not appear to be any guarantee that there would not be demands for increased wages for other sections of tramway employees.—Councillor Mayne (Newcastle) urged that owners of tramways should be careful not to prejudice the national position by making concessions in particular localities. It would be well if an understanding with the National Transport Workers' Federation could be reached which could be applied to the general question.—The importance of co-operation rather than separate action on the part of owners, whether municipal or company, was referred to by Mr. H. L. White (Great Grimsby) and Mr. A. L. C. Fell (London), and endorsed by the Chairman, who added that Mr. Williams (the Secretary of the N.T.W.F.) had used his influence in favour of questions being dealt with as between his Federation and the Association, rather than locally and separately.

A further discussion was opened by Mr. E. Edwardes on the subject of National Industrial Councils, as to which the Secretary mentioned that by the action of the Council of the Association the tramway industry was the third to start the formation of a National Council. Mr. Edwardes said the work was well in hand,

Digitized by Google

and gave an outline of the objects of the proposed Council, a draft constitution of which would shortly be submitted to the members of the Association. Mr. James Devonshire spoke of the cordial relations between representatives of employers' associations and trades unions in the Advisory Committee set up by the Ministry of Labour to deal with the question of the employment of discharged soldiers and sailors, which, he thought, was a good foundation for the success of the Industrial Councils.

Introducing a discussion on increased fares, Mr. A. L. Barber dealt with the Statutory Undertakings (Temporary Increase of Charges) Bill, and paid a tribute to the untiring efforts of the Council of the Association since 1916 to secure some relief for the tramway industry, for its ever-increasing burdens, specially mentioning the services rendered by Mr. Howley and Mr. de Turckheim.

A discussion followed on the Coal Restriction Order. Mr. Hardy (Bath) criticised the Coal Restriction Order, pointing out that 15 per cent. reduction in the consumption meant more than that reduction in actual service. He then referred to the burning of coke breeze and the economy that could be obtained from it. Messrs. Jewell, White, Fell and Mason gave some particulars of their experience in the use of coke breeze.

The members dined together; informally, at the Trocadero Restaurant in the evening, Viscount Chilston presiding.

## GAS-DRIVEN OMNIBUSES FOR LONDON.

The London General Omnibus Co., Ltd., have received police sanction to run 20 gas-driven motor-buses. The Company propose first of all to start with five omnibuses, which will run from Cricklewood garage and on route No. 16, but it is not anticipated that these omnibuses will be ready for service until towards the end of August.

Very extensive trials of a gas-driven omnibus have been carried out by the L.G.O. Co. and the Police, and the result has been extremely satisfactory. The cylinders containing the compressed gas are composed of a steel shell with a certain number of layers of gun tape wound round them. The maximum pressure in the cylinders will be 1,000 lb. to the square inch, and they are tested to withstand four times the pressure that they will be needed to hold.

When charged the cylinders will contain sufficient storage to make two complete journeys, and arrangements are being made to re-charge the cylinders at Cricklewood garage during a "lay-over" time of about 10 minutes.

---

The Gas Traction Committee (the Petroleum Executive, 12, Berkeley Street, London, W.1) announce that the following arrangements have been made, pursuant to Section 17 of their Interim Report, in respect of the Metropolitan area :—

(1) The Commissioner of Police of the Metropolis has approved the issue of licences for 20 motor omnibuses equipped to run on compressed coal-gas ;

(2) The necessary authority has been obtained to conduct trials with 20 goods-carrying commercial motor-vehicles equipped to run on compressed coal-gas ;

(3) The Petrol Control Department of the Board of Trade has sanctioned the issue in due course of the requisite gas permits ;

(4) The Coal Controller has concurred in respect of an agreed maximum total volume of gas on the understanding that the supply might have to be cut off during the winter months if the exigencies of the Gas position demands this course.

Section 17 of the Report referred to above reads as follows:—

It is desirable to encourage forthwith, under special licence from the Board of Trade where necessary, a limited number of experiments on a commercial scale with compressed gas in rigid metal cylinders, plain or wire-wound, at pressures up to at least, 1,800 lb. (120 atmospheres) on the square inch, in connection more particularly with certain of the larger motor omnibus undertakings and the transport departments of certain of the more important Municipal authorities, in order to obtain data for dealing with this post war development.

## MISCELLANEOUS NEWS AND NOTES.

**Barnsley Town Council** propose to appoint an independent engineering expert to advise on the electricity supply of the district.

**Fewer Stops at Salford.**—Now that the number of stopping places at Salford has been reduced, the average distance between stops is 200 yards.

**At Newport** the Corporation tramway workers demand the abolition of the long night turn and the substitution of an eight hours' straight shift.

**A Tramway Queue** has been introduced as an experiment by the Bournemouth Corporation, and will probably be adopted at many places in the town.

**Morecambe Corporation Bill,** which enables the Corporation to run motor omnibuses within the town, has passed the House of Commons Committee of Ways and Means.

**Increased Charges Bill.**—At a meeting of representatives of public utility undertakings, comprising gas, electricity, tramways, and water, at the Caxton Hall, Westminster, to consider the proposals of the Statutory Undertakings (Temporary Increase of Charges) Bill, it was declared that the proposals contained in the Bill were wholly inadequate, that the companies could not fulfil their obligations to the public unless they were empowered to pay a sufficient rate of interest to attract the necessary capital and so raise money for the important developments which would be necessary to the country after the war.

**Electricity Works Extensions.**—It is reported that Leeds Corporation will find it necessary to spend shortly about £120,000 on new generating plant for the electricity works and for extensions to the boiler-house and circulating pump-house.

**Manchester Tramways Committee** have given notice of a curtailment of the service. The last car will leave at 11 o'clock instead of 11.30 or 12. The all-night cars will, however, continue to run as usual for the convenience of night workers.

**Women Drivers.**—The Metropolitan Police have consented to allow women to drive tramway cars, and the manager of the Walthamstow Urban District Council's tramways reports a communication from the Commissioner agreeing to licence women as drivers.

**Sale of Old Tramcars.**—Owing to present restriction of manufacture, old tramcars find a ready market. It is stated that the Sheffield Corporation has bought some second-hand cars from the London County Council, and is selling some old cars, at £350 each, to the Preston Town Council.

**At Torquay** the men and women employed as conductors, under the lead of the manager (Mr. H. J. Nesbit) in five days collected for smokes for soldiers and sailors in home and foreign hospitals, £83 10s. 7d., free of all expenses. The tramway employees have recently collected £168 for the local hospitals.

**Strike Notice Suspended.**—Northampton Corporation Tramway employees, who had given notice to strike unless their war bonus was increased to £1, have decided to accept an advance of 1d. an hour, but request that the question of the additional 12½ per cent. go to arbitration. Cease work notices have been suspended.

**The Organisation of Industry.**—A meeting of the Industrial Reconstruction Council will be held in the hall of the Institute of Journalists, Tudor Street, London, E.C. on Wednesday, July 24, at 6 p.m., when Mr. Arthur Greenwood, Secretary of the Whitley Committee will open the discussion on the organisation of industry.

**Women as Drivers.**—The North Staffordshire Trades and Labour Council has protested against the proposed introduction of women tramcar drivers in the Potteries district. The grounds of the protest, as stated in a resolution, may be summarised as (1) sufficiency of discharged soldiers and sailors ; (2) strain of the work ; (3) cheapening of labour.

**Obstructions on Tramway Lines.**—Fines of 40s. with costs were imposed at Lambeth Police Court recently on each of two defendants for being the owners of vehicles which, owing to their defective condition, broke down and caused an obstruction to the traffic on the L.C.C. tramways. In one case the defendant alleged that his wheel was broken by defective tram lines.

**An Action for Damages** at the Leeds Assizes resulted in an award of £250 against the Leeds Corporation. The plaintiff, a woman in business as a carrier, was driving a motor wagon. A tramcar collided with it, and plaintiff was thrown off and sustained considerable injuries, and claimed chiefly for loss of business. The defence was that plaintiff was negligent. A counter-claim for five guineas for damage to the tramcar was dismissed.

**The Institution of Municipal Engineers.**—At a Council meeting on July 4 it was resolved that "it being desirable in the opinion of this Institution that municipal engineers should be represented by one strong body, with this object in view the Institution of Municipal and County Engineers be asked to appoint three of the members of their Council to meet three members of the Council of this Institution to discuss the matter and to report to their respective Councils."

**Tram Lines Condemned.**—Accidental death caused by defective tram lines was the verdict of a Coroner's jury in regard to the death of a woman who died in Guy's Hospital. The evidence showed that she was a passenger inside a motor-bus proceeding along New Cross Road, when a motor-lorry going in the opposite direction got beyond the control of the driver and came into collision with the omnibus. The deceased sustained a fracture of the skull and her sister and eight other passengers were injured.

**The Edinburgh Tramway Management.**—The Tramway Committee of the Edinburgh Corporation has considered the appointment of a manager for the tramway for which Messrs. W. Clough, general manager, Bury Corporation Tramways, and Mr. R. Stuart Pilcher, general manager, Aberdeen Corporation Tramways, had been recommended. It was agreed that the whole Committee should have an opportunity of seeing the two candidates, and, in addition, two other gentlemen who had stated that they would be applicants in the event of the salary being a certain sum.

**Blackpool Tramways.**—At a meeting of Blackpool Town Council on July 16 it was stated that an arrangement was being arrived at for the purchase of the Blackpool and Fleetwood Tramroad, and it is expected that the arrangement will shortly be completed. The share capital of the company is £150,000, and there are £35,000 of debentures. During its history of 20 years, the company has regularly paid good dividends and the price of the £10 shares is about £13 15s. The lease of 7½ furlongs of the line belonging to the Blackpool Corporation will expire in about a year, while the Fleetwood Council will have the right to purchase that part of the undertaking within its district in 1928.

**Transport and Delivery of Goods.**—In reply to a question by Mr. Wilson Fox in the House of Commons on July 16, Mr. Bonar Law said that in view of the large number of members who appear to favour an inquiry by a Select Committee in the matter relating to goods transport, he would be prepared to move for the appointment of such a committee. The names of 237 members of the House had been appended to a resolution standing in the Year Book in favour of the appointment of a Select Committee to review the methods, working, and equipment of the various agencies by which the transport and delivery of goods is effected and of examining suggestions for improvements in the existing system.

Digitized by Google

**Tramway Statutory Fares.** The report stage of the Statutory Undertakings (Temporary Increased Charges) Bill was mentioned on Thursday by Mr. Bonar Law among the business to be taken by the House of Commons next week.

**Conspiracy Charge Verdict.**—At the Central Criminal Court, on Tuesday, the Common Serjeant concluded the trial of Harry John Lawson and Stuart Alfred Curzon on a charge of conspiracy to defraud in connection with the General Omnibus (Supply Manufacturing) Company. The jury found both prisoners guilty, adding a rider to the effect that though Curzon had become a party to the conspiracy they thought he had been drawn into it by Lawson. A previous conviction and sentence of twelve months' imprisonment in November, 1904, for publishing a false prospectus with intent to deceive was proved against Lawson. The Judge postponed sentence until Monday.

**Collision at Manchester.**—A collision between two Manchester Corporation tramcars occurred near Queen's Park, Manchester, last week. An outward bound car was travelling along Rochdale Road, and on nearing Conran Street the driver operated the automatic switch, which transferred his car on to the Conran Street metals, along which a second car was proceeding towards Manchester. Both vehicles were travelling at a fair speed, and the impact was a severe one. The fronts of the two cars were badly damaged, and broken glass and splintered wood was strewn about the road. Two passengers—a woman and a boy—were injured, and were detained in hospital till the following day. Several passengers complained of shock. The breakdown gang was soon on the scene, and traffic was resumed in a very short time.

**The British Electrical & Allied Manufacturers' Association.**—We are informed that the following firms have been elected members of this Association :—

Accumulators, Ltd. (London), Arora Company (Loughborough), Ashdowns (Gravesend,) Associated Battery Co., Ltd. (Penge), J. W. Barnard (London), Bastian Electric Co., Ltd. (London), Belling & Co. (London), Bluemel Bros., Ltd. (Wolston), Brompton & Kensington Accessories Co., Ltd. (London), Cable Accessories Co., Ltd. (Tipton), Creggon & Co., Ltd. (London), Curtis Manufacturing Co. (London), Electric & Engineering Specialties Co (Liverpool), Fuller Accumulator Co., Ltd. (Chadwell Heath), Griffiths Bros. & Sons London, Ltd. (London), Jackson Electric Stove Co., Ltd. (London), Jeal & Co., Ltd. (London), Lithanode Ltd. (London), Lucas, Joseph Ltd. (Birmingham) New Peto and Radford Accumulator Co., Ltd. (London), Randall Brothers (London), Richford & Co., Ltd (London), Rotax Motor Accessories Co., Ltd. (London), Rushmores, Ltd. (London), Sun Electrical Co., Ltd. (London), Surrey Electrical Co., Ltd. (London), C. A. Vandervell & Co., Ltd. (London), F. Wiggins & Sons (London).

**The Industrial Reconstruction Council** has arranged for an important series of lectures for the autumn and winter. The first of these will be given by the President of the Board of Trade (Sir Albert Stanley, M.P.) on Wednesday, October 2, Mr. G. N. Barnes, M.P., occupying the chair. Other lectures will follow at fortnightly intervals, the second being delivered by the Minister of Reconstruction (Dr. Addison, M.P.), under the chairmanship of the Lord Mayor. Mr. W. L. Hichens, Sir Arthur Steel-Maitland, Bart., M.P., Mr. Ernest J. P. Benn, and Sir William S. McCormick will carry the series up to Christmas, the chair being occupied by Sir Wilfrid Stokes, Lord Burnham, Mr. J. H. Whitley, M.P., and the Marquess of Salisbury. The lectures will be given at the Saddlers' Hall, Cheapside, at 4.30 p.m. A full prospectus of the series can be obtained from the Secretary, I.R.C., 2 and 4, Tudor Street, E.C.4.

**L.C.C. Tramway Car Overturns.**—A London County Council tramcar passing over Blackfriars Bridge on Saturday afternoon overturned on the Victoria Embankment. There were about seven or eight passengers on the car. Two were removed to hospital—one, a man, complaining of internal injury; and the other, a woman, who was badly hurt about one of her legs. Other passengers suffered from contusions and shocks. Neither the driver nor the conductor was hurt. An electric standard was broken. Soon after the car overturned, flames shot up from the conduit, but the fire soon ceased on the application of sand. The conductor stated that the car was not going at an excessive speed, though fairly fast. The speed was not eight miles an hour—he thought it was more like six. Traffic was quickly resumed. The King and Queen drove by soon after the mishap had occurred, and in the excitement of rescuing the passengers the passing by of the Royal party was almost unnoticed.

## FINANCIAL REPORTS AND MEETINGS.

**New South Wales State Railways and Tramways.**—The report for the quarter ended March 31 gives principal details as follows :—Railways—Revenue £2,456,096, inc. £164,649; expenditure £1,487,348, inc. £91,602; number of passengers 25,269,940, inc. 1,103,046; tonnage 3,155,469, dec. 33,914; lines open (miles) 4,580, inc. 270½; percentage, expenditure to earnings, 60·56 per cent., dec. ·35 per cent. Tramways—Revenue £563,937, inc. £47,333; expenditure £395,539, inc. £3,538; number of passengers, 71,083,908, dec. 5,165,963; percentage, expenditure to earnings, 70·14 per cent., dec. 5·74 per cent.

**Hadfields.**—An interim dividend of 1s. per share, free of tax, on the ordinary shares, payable 29th instant, is announced.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended July 17, amounted to £63,896, an increase of £7,371 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to July 17 (fifteen and a half weeks), the total receipts were £961,000, an increase of £111,592 on the corresponding period of 1917.

**Northampton Corporation Tramways.**—The balance sheet for the year ended March 31, showed a net profit on the year of £3,235 2s. 8d., of which £1,625 is transferred to the reserve fund, and £1,610 2s. 8d. carried forward. In the year ended March 31, 1917, there was a deficit of £3,003 12s. 6d. The effect of the alterations in the fares is seen in the traffic receipts, which were £44,226 14s. 1d., against £36,953 in the previous year. Wages to motormen and conductors (apart from bonus) absorbed £6,434 5s. 11d., as against £6,434 11s. 3d. in the year ended March 31, 1917, £2,169 10s. 1d. was spent on repair and maintenance of the permanent way, as against £2,559 11s. 6d., and £3,500 in the upkeep of cars, as against £2,789 13s. 3d. Fuel cost nearly £1,000 more than in the preceding year—£5,445 0s. 7d., against £4,489 18s. 10d.; allowances to men who have joined the Forces absorbed £1,811 15s. 4d., against £1,647 11s. 3d.; and war bonus £3,000 13s. 2d., as against £982 4s. 3d. On the Parcels Department the income was £438 18s. 10d., and the expenditure £322 4s. 11d. During the year 737,007 car miles were run as against 748,271. The passengers carried numbered 10,753,042 as against 9,707,456; and the parcels dealt with were 43,131, as against 54,844.

**Keighley Corporation Tramways.**—In the annual report and statement of accounts, Mr. Harry Webber, the borough electric engineer and tramways manager, says that, notwithstanding the heavy charges for war bonuses and allowances, there is a substantial net profit on the undertaking as a whole. The inauguration of the penny, all-the-way fare has been a success. On the railed track the revenue has increased £2,042, but, per contra, the war allowances and bonuses have gone up by £683, and the other working expenses £53. The car miles have dropped by 35,417, due to reduced evening service, and the passengers have fallen by 413,847, to 3,088,807. This decrease is more apparent than real, however, on account of one ticket now franking a passenger over the whole length. The receipts per car mile have increased from 11·2d. to 15·8d. On the trackless trolley system a great deal of trouble has arisen through the difficulty of getting repairs to mechanism which was made in Austria before the war. In spite of increased revenue, this part of the system has resulted in a loss of £457, and as soon as possible a further increase in the fares will have to be adopted. The car miles have dropped from 73,277 to 57,158, but the return has been 19·6d. per car mile as against 14·1d. The gross profit for the year has been £3,178, and after providing for interest and sinking fund there is left a net surplus of £1,211. It is proposed to pay out of this debts on the trackless undertaking of £762, and on the tramways of £279, and to carry the balance of £170 to reserve fund. Parliamentary sanction to increased war-time fares is looked forward to.

## PERSONAL.

**Mr. G. F. Craven,** General Manager of the Reading Corporation Tramways, has been appointed Local Fuel Overseer for the Borough of Reading.

**Mr. Sidney F. James,** Town Clerk of Ilkeston and honorary solicitor to the Municipal Tramways Association (Incorporated), has been appointed secretary to the Tramways (Board of Trade) Committee.

**Mr. Edward Manville** was the guest of the Association of British Motor and Allied Manufacturers at a dinner at the Royal Automobile Club last week. In addition to rendering other services to the industry, Mr. Manville was recently President of the Association. He is President of the Association of Chambers of Commerce of Great Britain.

**The British Thomson-Houston Co., Ltd.,** has issued a new descriptive list, No. 5,100, on hand-operated starting rheostats, specially designed to meet the growing demand for a totally enclosed rheostat, in which both switch and resistance are enclosed in such a manner as to prevent access of dust and give complete protection to all live parts. It is pointed out that these rheostats, though simple in design, are constructed to meet all the necessary requirements of service, and comply in all respects with the Home Office Rules for the use of electricity in factories. They can be supplied for circuits up to 550 volts and are designed for use with the various sizes of motors given below. The list contains twelve quarto pages of illustrated descriptive matter.

# THE AUTOBUS

## IN THE TRAMWAY WORLD.

**Motor Traffic Section.**

When "The Tramway and Railway World" was founded in 1892, motor traction was, of course, scarcely dreamt of, but the avowed object of the paper was to encourage all new methods that gave promise of usefulness.

In pursuance of that policy the progress of motor traction received early attention. Commenting on the historic motor parade to Brighton in 1896, "The Tramway and Railway World" predicted that

"It would give a prodigious impulse to transport both by road and rail,"

Within a decade this prophecy was abundantly fulfilled and so much space had been devoted to the new industry that in 1906 a special

### MOTOR TRAFFIC SECTION

was added. Every illustrated issue thus contains a section devoted especially to motor cars for Public Service, and includes articles on current topics, illustrated descriptions of new types of vehicles and accessories, and the latest news.

**Public Service Motor Cars.**

The importance of this section will be gathered from the fact that an increasing number of the leading municipal authorities, railway and transport companies now own and operate large fleets of motor vehicles, including omnibuses, chars-a-bancs, motor lorries, for the transport of goods, parcel delivery vans, tower wagons, motor street sweepers, and a variety of other types.

## POSITIONS VACANT.

### EBBW VALE URBAN DISTRICT COUNCIL.

#### Resident Electrical Engineer.

The District Council invite applications for the appointment of a Resident Electrical Engineer. Salary £250, rising by annual increments of £10 to £300 per annum.

Candidates for the position should have had experience of the erection and maintenance of a large overhead distribution system, be conversant with the management of a Municipal Electricity Undertaking with over 1,000 consumers, and shall also have had experience in the management of an Installation Department. The District Council have no generating station, but purchase current in bulk.

The successful applicant will be required to devote his whole time to his duties, and not engage in other work.

Applications (stating age, qualification and experience), accompanied by copies of three recent testimonials, should be enclosed in a sealed envelope, endorsed on the outside "Engineer," and should be delivered at my office not later than August 12, 1918.

THOS. HUGHES,
Clerk.

Dated the 19th day of July, 1918.

### COUNTY BOROUGH OF OLDHAM.

#### Shift Engineer.

The Oldham Corporation Electricity Committee invite applications for the position of Shift Engineer, in charge of an eight-hour shift. Weekly wage £2 10s., and war wage £1 8s. 9d.

Applicants must have had a good mechanical and electrical training and must also have had previous experience in an Electric Generating Station giving direct and E.H.T. supplies.

Applications, endorsed "Shift Engineer," stating age, experience, etc., together with copies of not more than three recent testimonials, to be sent to Mr. Fred L. Ogden, Borough Electrical Engineer, Greenhill Electricity Offices, Oldham, not later than Thursday, August 1, 1918.

Canvassing will be a disqualification.

J. H. HALLSWORTH,
Town Clerk.

Oldham, July, 22, 1918.

### RADCLIFFE URBAN DISTRICT COUNCIL.

#### Shift Engineer.

Shift Engineer wanted, with previous experience in direct current three-wire and traction supplies, high-speed direct-coupled steam sets. Experience with rotary converter equipments will be a recommendation. Wages £3 5s. plus 12½ per cent. per week of 56 hours. Certified undertaking.

Applications, giving experience, age, to be sent to Engineer and Manager, Electricity Works, Lomax Street, Radcliffe, Lancashire.

### DERBY CORPORATION.

#### Electricity Department.

Wanted, Switchboard Attendant, wages 60s. per week, plus 12½ per cent. 48 hour week. Applications, endorsed "Switchboard Attendant," stating full details, should be addressed to Borough Electrical Engineer, 9, Irongate, Derby.

### SHIFT ENGINEER.

The Rawtenstall Corporation invite applications for the position of Shift Engineer. Applicants should have had experience in Lancashire and water-tube boilers, steam turbines, and high-tension three-phase system. Applications, giving full particulars, stating wages required, together with copies of not more than two testimonials, to be sent in to the undersigned, not later than Wednesday, the 31st instant.

C. L. E. STEWART, A.M.I.E.E.,
Borough Electrical and Tramways Engineer.

Bacup Road, Rawtenstall,
July 23, 1918.

### SHIFT ENGINEER.

Wanted, Shift Engineer for Power Station, A.C., three-phase, E.H.T. and D.C. supply. Wages £3 10s. per week and overtime.—Apply, giving full particulars of past experience and testimonials, to the Manager, Sheerness and District Electric Power and Traction Co., Ltd.

### CHARGE ENGINEER.

Wanted, Charge Engineer for certified undertaking; must have had mechanical and electrical E.H.T. experience; wages £3 10s., plus 12½ per cent. war bonus per week of seven 8-hour shifts.—Apply, stating age, and full details of experience and training, to General Manager, Tramways, Atherton, Lancs.

### ARMATURE WINDER.

Wanted, an Armature Winder; must be ineligible for Military Service; good wages to suitable man.—Reply, giving particulars of training, experience, and age, to Box 57, THE TRAMWAY AND RAILWAY WORLD, Amberley House, Norfolk Street, London, W.C.2.

### Ticket Inspectors.

Two smart Ticket Inspectors wanted. Men with experience as Ticket Clerks or Conductors will be considered. Age 25 to 40. Wages 45s. Permanent position to suitable men. Apply, Tramway Company, Oxford.

MANCHESTER MUNICIPAL

COLLEGE OF TECHNOLOGY.

(UNIVERSITY OF MANCHESTER).

Principal: J. C. M. GARNETT, M.A. (late Fellow Trin. Coll. Cam.).
Vice-Principal: E. M. WRONG, M.A. (Fellow Magdalen Coll., Oxford).
The Session 1918-1919 will open on 3rd OCTOBER. Matriculation and Entrance Examinations will be held in July and September. Matriculated students may enrol for 1918-19 from 1st August, 1918, and if under 18 years of age are eligible for membership of the Officers' Training Corps.

DEGREE COURSES IN TECHNOLOGY.

The Prospectus gives particulars of the Courses leading to the Manchester University Degrees (B.Sc. Tech. and M.Sc. Tech.) in the Faculty of Technology, in the following Departments:—

MECHANICAL ENGINEERING (Prof. G. G. Stoney, F.R.S.).
ELECTRICAL ENGINEERING (Prof. Miles Walker, M.A.).
SANITARY ENGINEERING (including Municipal Engineering).
THE CHEMICAL INDUSTRIES (including General Chemical Technology, Bleaching, Dyeing and Dyestuff Manufacture, Printing, Papermaking, Fermentation Industries, Metallurgy, Fuels).
TEXTILE INDUSTRIES, MINING, ARCHITECTURE,
PRINTING AND PHOTOGRAPHIC TECHNOLOGY.

ADVANCED STUDY AND RESEARCH.

The College possesses extensive laboratories and workshops, equipped with full-sized modern apparatus, including machines specially constructed for demonstration and original research.

PROSPECTUS OF UNIVERSITY COURSES OR OF PART-TIME COURSES SENT FREE ON APPLICATION.

## THE TRAMWAY POSITION ASSURED.

The anxiety of those responsible for the conduct of tramway undertakings during the war should be sensibly lessened by the passing of the Bill in the House of Commons on Wednesday providing for the increase in the maxima charges that may be made by certain statutory undertakings, including tramways and light railways. As originally proposed these undertakings were to be authorised to make such charges as would enable them to pay dividends not exceeding one-half of the pre-war rate. After a long discussion, which dealt mainly with the position of the gas companies, the Bill was amended in Committee, making the dividend rate three-quarters instead of one-half of the pre-war rate. The Bill is to continue in force for two years after the war and though the position of tramway owners under it is considerably less favourable than that of railway shareholders the new arrangement must be regarded as not unsatisfactory. Whatever may be the case in regard to the other statutory undertakings there can be no question of the justice of the arrangements so far as tramways are concerned. These undertakings have been dealt with somewhat arbitrarily by Government: their services have been reduced, the wages of the employees have been repeatedly increased by awards by the Committee of Production, and it is no secret that these awards have been given in some cases not on the merits of the case but because Government stood committed to increases in other industries. If the tramway undertakings, which are essential to the manufacture of munitions, were to be carried on it was necessary that they should be in a position to cover part at least of their increasing expenses. The Bill has yet to be considered by the House of Lords and it is unfortunate that the relief will come so late that the tramways will derive little advantage from it this summer. In the meantime managers and directors of the various undertakings will have opportunities to prepare their individual cases for presentation to the Board of Trade, whose approval is required under the Bill for proposed increases in fares. The proviso that in the case of local authorities there may be an increase in the statutory maxima, in order to avoid loss, of so much as 50 per cent. should take from many municipal tramways the danger now imminent of recourse to the rates. It is over two years since the Tramways and Light Railways Association approached the Board of Trade in an endeavour to obtain some concessions which would enable the tramways to make the necessary increases in statutory maxima fares. The Municipal Tramways Association also moved in the matter and a great deal of time and energy has since been expended by the Councils of the two Associations in their persistent endeavour to obtain action by the Board of Trade. Although the Bill will, no doubt, be criticised as unsatisfactory in some particulars, we think that on the whole members of the Associations have reason to congratulate themselves and their Councils upon the result which has been attained.

## LONDON OMNIBUS SUBSIDY.

In the House of Commons on Wednesday last Mr. GILBERT asked the Minister of Munitions what were the grounds on which the London General Omnibus Company applied for a subsidy for their motor omnibuses in South-East London; whether the subsidy is paid yearly, half-yearly, or quarterly; whether it is paid on the total mileage run by the omnibuses per week, including Sundays, or if it is only paid on the estimated mileage run when carrying munition workers; can he state if the omnibuses have to give preference to the munition workers on all routes over all other passengers; and can he give any estimate of the total number of munition workers carried on the various omnibus routes since the subsidy has been paid?

Mr. KELLAWAY: The original agreement with the London General Omnibus Company provided that the services in the Woolwich area should be supplied without charge to the Ministry, and it was only when the company stated that they were unable to continue these services without the aid of a subsidy that terms were arranged. The company renders quarterly statements of account. As stated by the present Minister of Blockade in his reply to my hon. friend on the 18th June, the amount of the present grant is based on the difference between the average earnings per mile of the omnibuses in the South-Eastern area, as compared with the average earnings of the omnibuses in the remainder of the Metropolis, subject to certain conditions. The question of giving preference to munition workers was considered, and was found to be impracticable. The number of Arsenal and dockyard workers using the omnibuses is approximately 13,500 a day.

Mr. F. WHYTE: Has the hon. gentleman changed his former opinions regarding this company?

Mr. KELLAWAY: We are all exposed to many permutations.

Mr. WATT: Are we to understand that no fares are charged on these 'buses to munition workers?

Mr. KELLAWAY: Certainly not. Fares are charged. It is not a charity.

## EDINBURGH TRAMWAYS MANAGEMENT.

Edinburgh Tramways Committee on Wednesday unanimously agreed to recommend Mr. R. Stuart Pilcher for appointment as general manager of Edinburgh Corporation Tramways. Mr. Pilcher has been general manager of Aberdeen Corporation Tramways for the past twelve years, and is 36 years of age. His work at Aberdeen has been very successful and the undertaking has been largely developed under his direction. Mr. Pilcher was one of the first managers to recognise the advantage of placing energy meters on cars and to the Conference of the Municipal Tramways Association in London in October, 1909, he contributed a paper on "Current Consumption," describing the notable saving that had been effected in Aberdeen by the use of meters, which he characterised as "the most valuable part of our system of check of current consumption."

The Edinburgh Tramways, are owned by the Corporation, but have been worked by the Edinburgh and District Tramways Co., Ltd. The lease will expire in June, 1919, and the working will then pass into the hands of the Corporation, who desire Mr. Pilcher to take up his position as soon as possible in order that preparation for the transfer may be undertaken without delay. The tramways are worked by cable traction and comprise 42.4 miles of track. They were fully described and illustrated in THE TRAMWAY AND RAILWAY WORLD, of March 8, 1900. Plans for the conversion of the system to electric traction have already been discussed and reports have been submitted by Mr. A. H. Campbell, the borough engineer, and Messrs. J. B. Hamilton and Peter Fisher, which were summarised in our issue of December 13, 1917. It is not, however, expected that the conversion of the system can be commenced until peace is restored.

# A BILL TO INCREASE STATUTORY CHARGES.

THREE-QUARTERS OF THE PRE-WAR RATE OF DIVIDEND GUARANTEED.

The following is the text of the Bill which, as amended, was read the third time and passed by the House of Commons on Wednesday. It enables the statutory provisions affecting the charges which may be made in respect of certain undertakings, including tramways, to be modified during the continuance of the present war and for two years thereafter. The amendments made in the Bill since it was introduced by Sir Alfred Stanley, President of the Board of Trade, are indicated by italics.

1. (i.) Where it appears to the appropriate Government Department that the financial position of any undertaking to which this Act applies has been adversely affected by circumstances arising out of the present war, the Department may, if they think fit, by order provide for the modification of any statutory provisions regulating the charges to be made by the undertakers, and of any statutory provisions consequential on or supplemental to any such provisions as aforesaid, for such period during the continuance of this Act, in such manner, and subject to such conditions, as appear to the Department to be just and reasonable:

Provided that—

(*a*) Where the undertakers are a local authority no modification shall be authorised which will increase the statutory maximum charge by more than 50 per cent., or which is more than sufficient so far as can be estimated to enable the undertaking to be carried on without loss; and

(*b*) In any other case no modification shall be authorised which is more than sufficient to enable *with due care and management* a dividend on the ordinary stock or shares of the underaking to be paid at *three-quarters* the standard or maximum rate of dividend, if any, prescribed for the undertaking, or at *three-quarters* the pre-war rate of dividend, whichever is lower.

(ii) An application to a department for the purposes of this Act shall be accompanied by such information, certified in such manner as the department may require with respect to the financial position of the undertaking in question, *and before making an order the appropriate Government department shall require the undertakers to give public notice of the application for an order under this Act, and as to the manner in which and time within which representations may be made, and to give a similar notice to the council of each county, borough, or urban, or rural district within which any part of the undertaking or limits of supply of the undertaking is situate, and the department shall consider any representations which may be duly made.*

(iii.) The undertakings to which this Act applies are tramway undertakings, including light railways constructed wholly or mainly on public roads, and undertakings for the supply of gas, water, and electricity *and in calculating the maximum charge which may be authorised under this Act in respect of such tramway undertakings fractions of one halfpenny shall be calculated as one halfpenny.*

(iv.) For the purposes of this Act—

The expression "statutory provisions" includes the provisions of any order having the force of an Act;

The expression "appropriate Government Department" means, in relation to gas and water undertakings carried on by local authorities, the Local Government Board, and in relation to other undertakings the Board of Trade;

The expression "local authority" includes any commissioners, trustees, or other public body of persons carrying on, otherwise than for purposes of private profit, any undertaking to which this Act applies.

The expression "pre-war rate of dividend" means the average rate of dividend for the three financial years immediately preceding the war.

2.—In the application of this Act to Scotland the Secretary for Scotland, and in the application of this Act to Ireland the Local Government Board for Ireland, shall be substituted for the Local Government Board.

3.—(i) This Act may be cited as the Statutory Undertakings (Temporary Increase of Charges) Act, 1918.

(ii.) This Act shall have effect during the continuance of the present war and for a period of two years thereafter, and no longer.

---

AMENDMENTS IN THE HOUSE OF COMMONS.

The Statutory Undertakings (Temporary Increase of Charges) Bill was considered in Committee of the House of Commons on Tuesday, and read a third time and passed on Wednesday. Clause 1, which related to modifications of statutory provisions affecting charges, was amended in a sub-section dealing with ability to pay a dividend by the insertion after the word "enable" of the words "with due care and management." The same sub-section was further amended by the substitution of "three quarters" instead of "half" in reference to "the standard or maximum rate of dividend, if any, prescribed, and "the pre-war rate of dividend." A further amendment provided for the public notification of any application for an order. Clause 1 as amended and clauses 2 and 3 without amendment were ordered to stand as parts of the Bill, which was then reported to the House. On the consideration of the amended Bill by the House of Commons, it was further amended by the inclusion of hydraulic power undertakings within its scope. In regard to tramways an amendment was agreed for insertion of the following "and in calculating the maximum charge which may be authorised under this Act in respect of such tramway undertakings, fractions of one half-penny shall be calculated as one halfpenny."

# L.C.C. TRAMWAY MATTERS.

At the meeting of the London County Council on Tuesday several reports relating to tramways were brought up by the Highways Committee.

EXTENSION OF TIME FOR TRAMWAY CONSTRUCTION.

On the recommendation of the Highways Committee it was resolved to make application to the Board of Trade for an extension of time allowed for the construction of the following tramways authorised by various Acts of the London County Council:—

From Queen St. into and along Bridge St., Hammersmith (Act of 1903).
Junction from Tooting High St. into Mitcham Rd. (Act of 1908).
Junction from Clerkenwell Rd. into Farringdon Rd. (Act of 1909).
Junction from Battersea Park Rd. into Battersea Bridge Rd. (Act of 1909).
Junction from Mitcham Road into Southcroft Road, (Act of 1909.)
Junction from Dulwich Road into Norwood Road (Act of 1910).

HOUSING AND TRANSPORT AFTER THE WAR.

A conference is to be held of the Metropolitan borough councils and local authorities in districts surrounding the County of London on the subject of housing after the war. Without expressing any opinion on the question of the means of transit, the Highways Committee felt that the conference must, in order to survey the whole field, take the question of transport into consideration so far as it is ancillary to the main question before them. It was accordingly resolved that the discussion of the question of the provision and adequacy of the means of transport should be authorised so far as it is ancillary to the question of housing after the war.

APPLICATIONS FROM EMPLOYEES.

Several petitions had been received since the last meeting of the Council from employees in the rolling stock and electrical branch of the tramways department asking for alterations in their conditions of labour, etc. In order that the petitions might be dealt with if possible before the summer recess, meetings of the appropriate conciliation boards had been fixed for July 22 and 24. There had consequently been no opportunity to obtain the Council's sanction to the references of the petitions to the boards, but the Council approved the reference to the Rolling Stock Conciliation Board, of the application of yard and shop cleaners and certain brakesmen for an increase in wages, and the reference to the Electrical Conciliation Board of similar applications from telephone operators, gate constables, etc.

COLLECTION OF USED TICKETS.

Captain A. O. Goodrich J.P., asked a series of questions with reference to experiments being made on certain routes for the collection of used tickets, as is being done in Glasgow, and whether in view of the paper shortage, the great need of raw material, and the fact that an explosive tube can be made from a couple of tram tickets, it would not be advisable to undertake the systematic collection by means of boxes at once instead of waiting for the results of the experiment.

Mr. G. H. Hume replied that experiments were being made on two routes, viz. Hammersmith, and Woolwich to Eltham. Sacks are hung in a prominent position on the sides of the staircase at each end of the car with a printed notice on the sacks, together with other notices in the cars. All reasonable steps had been taken to make the experiments a success. Bags were found to give better results than boxes. The question of extending the sacks to other routes was under consideration but regard had to be had to the number of tickets collected. By reducing the size of the tickets a saving of 100 tons of pulp per annum had been effected.

Mr. J. D. Gilbert, M.P., asked what instructions were given to drivers as regards speed on the approach to the Embankment from Blackfriars Bridge, whether the curve was approached at far too high a speed and whether in view of the recent accident instructions would be given to reduce speed at that point.

Mr. Hume replied that instructions were given to observe the Board of Trade regulation that speed should not exceed 4 miles an hour. The speed here was usually very slow, but there might be isolated exceptions. Great care was exercised by drivers and strict conformity with the speed regulations was exacted.

# INCREASED FARES.

At Hull halfpenny fares on the Corporation Tramways are to be abolished from August 5, except the halfpenny fare on the Old Town route (between the City Square and the Pier); and the halfpenny morning fares up to nine o'clock. This gives a flat rate of one penny on all the routes except that in the Old Town.

On the Huddersfield Corporation Tramways next week ordinary fares will be increased ½d. on all fares from 1d. to 2½d., and 1d. on 3d., 4d., 5d., and 6d. fares. The 3½d., 4½d., and 5½d. fares will be abolished, and replaced by charges of 5d., 6d., and 7d. The minimum fare will be 1½d. Similarly workmen's fares will be advanced ½d. on fares of 1½d., to 2½d. and 1d. on fares of 3d. to 6d., with the abolition of the intermediate prices as in the case of ordinary fares. No change will be made in the price of children's or scholars' tickets. Up to the present sailors and soldiers were expected to pay fares if they utilised the cars between the hours of 12 and 2. They will now be expected to pay fares if they travel on the cars between 12 and 2.30. It is stated that the object of the raising of the fares is to recoup the undertaking for the largely increased cost of working expenses.

The Leeds Tramways Committee is well satisfied with the results of the alterations that were recently made in fares. During the past five weeks there has been an average increase of nearly £2,900 per week in the receipts. The object of the Committee in making the increase was not only to secure an increase in revenue, but to

Digitized by Google

effect a reduction in the number of passengers. Both objects have been attained. The revenue shows an increase of 16·1 per cent., while the decrease in the number of passengers amounts to 11·53 per cent. It is expected that in a short time there will be as many passengers as before the increase in fares was made.

## THE "SAFETY FIRST" MOVEMENT.

TO BE EXTENDED TO THE WHOLE COUNTRY.

At a meeting of the London "Safety First" Council at the Guildhall, Westminster, last week, Sir Edward Smith, J.P., L.C.C., presided, and among those present were Messrs. W. Murray (tramways manager, Walthamstow), M. L. Slattery (tramways manager, West Ham), G. H. Dennis (publicity manager, L.B. & S.C.R.), H. E Blain (operating manager, Underground Railways), and C. Watson (district secretary, Amalgamated Association of Tramway and Vehicle Workers). A proposal to extend the "Safety First" movement to the whole country was approved. An award of prizes to the value of £30 for children's essays was reported by the Schools Propaganda Committee, and it was decided to allocate £50 for a similar purpose for the year 1919. Certain suggestions in a report of the Street Lighting Sub-Committee of the Street Safety Committee as to the modification of automobile headlights of excessive brilliancy were adopted. The Publicity Committee reported that it had undertaken for the Drivers' Educational Committee the production of a poster entitled "Unusual Accidents," and that the London County Council and the Automobile Club had consented to distribute "Safety First" literature to drivers of vehicles.

## REDUCTION IN TRAMWAY SERVICES.

The shortened services on the Manchester Corporation Tramway system is now in operation. The last cars for most districts leave about eleven o'clock; but the all-night service is maintained with slight changes. The general public are asked to try to get the ordinary late cars and leave the night cars to the night workers.

On the Huddersfield Corporation Tramways as from next week, the service of cars and the number of stopping places are being reduced, and the last cars will leave earlier; the principal reason for these changes is the necessity for reducing the consumption of coal in accordance with Government requirements.

The Leeds Tramways Committee have not yet wholly met the Coal Controller's requirements for a reduction in the consumption of coal. An average of one out of every four stopping places has been abolished, and Mr. J. B. Hamilton, the general manager, has recently indicated that a cutting down of the services at an earlier hour in the evening may be necessary. In the meantime large employers of labour are being urged to stagger the times of starting and stopping their works, so as to avoid a rush of traffic at one particular time and more evenly distribute the load on the tramways. This arrangement would enable a further saving of coal to be effected.

## MISCELLANEOUS NEWS AND NOTES.

**For Soldiers on Leave.**—A special car is run by the Burnley Corporation after the arrival of the last train.

**No Minister of Commerce.**—Mr. Bonar Law states that it is not the intention of the Government to appoint a Minister of Commerce. —*The Times.*

**Engineers in the War.**—Of 3,000 members of the Institution of Civil Engineers who have undertaken naval or military service since the outbreak of war, 285 have died and more than 270 have received decorations.

**Women as Drivers.**—It is understood that the Ministry of National Service and certain trade unions are conferring on the question of the employment of women as tramcar drivers.

**Parcels on Huddersfield Tramways.**—A scheme is being drawn up in accordance with the impending transport re-arrangements for the extension of facilities for the conveyance of parcels on Huddersfield Corporation tramways.

**The Subsidising of Motor Buses** by the Government in munition areas in south-east London and the adjoining districts of Kent is to be the subject of consideration by a committee representing metropolitan municipal tramway authorities.

**New Cars for Aberdeen.**—The Aberdeen Corporation Tramway Committee has approved the design of a new open-deck tramway car built by the tramway department. It is proposed to have three others of similar design contributed by the department.

**Tramways Construction Delayed.**—Applications are being made by the London County Council for an extension of time for the construction of tramways at Eltham and by the Southport Town Council for the completion of the electrification of its tramways.

**Wages Award at Bradford.**—Bradford Corporation have decided that the women employees shall be given an advance of 3s. a week. This follows on the recent award made by the Committee on Production granting an advance of 5s. a week to men employees.

**Census of Railway Wagons.**—The Board of Trade have made an order under the Defence of the Realm Regulations providing for a census of all railway wagons now owned by railway companies. The form of return provides for a statement of the size, capacity and description of the wagons, and the traffic for which they are used. The return is to be completed by August 14. It is generally believed that half the standard railway gauge wagons in the country are privately owned, and the return is made in an effort to find out whether this is so.

**A Municipal Tramway to Lose its Manager.**—An interesting announcement, which will be made early next week, will affect the management of two important tramways. A large provincial undertaking is about to lose its manager, who will accept an important London appointment.

**Fine for Non-Payment of Fare.**—For attempting to avoid paying fare on a Corporation car at Blackpool last week a fine of 15s. was imposed. It was stated that defendant, a domestic servant, said "contract," when asked for her money, but refused to produce a ticket or to give her name and address.

**Drivers' Disagreement.**—Two tramcar drivers have been fined 20s. each at Gateshead for causing an obstruction in the street. It appears that a dispute arose as to which car should first cross on a particular line. Neither driver would give way, and the cars remained for several minutes blocking the traffic.

**Women as Drivers at Walthamstow.**—Up to the middle of the week, licenses had not been received at Walthamstow for the twelve women trained for tram drivers. It appears that the Commissioner of Police requires to be satisfied that there are no discharged soldiers available for the work before he issues the licences.

**The Blackpool Tramway Purchase.**—The contract for the purchase of the undertaking of the Blackpool and Fleetwood Tramroads Company by the Blackpool Corporation provides for the taking over of the undertaking at the end of the year, but the purchase money will not be paid until the end of the war. In the meantime the Blackpool Corporation will pay the dividend. It is understood that the Corporation are paying at the rate of £15 per £10 share.

**Duty of Drivers where Tramcar Stops.**—At a Metropolitan Police Court recently it was alleged that the defendant in a summons for dangerous driving had driven a lorry through a crowd about to enter a stationary tramcar and one person was slightly injured. Defendant pleaded that he was not going more than three miles an hour, that he had sounded his horn repeatedly, and that he was not aware that he had touched anyone. In imposing a fine of 40s., the magistrate said it was the duty of the driver to take extra precautions where a tramcar was stopped.

**Conviction for Smoke Emission Quashed.**—An important decision, affecting some thousands of steam wagons, has been given in the Appeal Court at Liverpool against the finding of the St. Helens magistrate whereby he convicted the drivers of a Foden wagon and a Sentinel wagon for emitting smoke from their vehicles, the prosecution being at the instance of the St. Helens Chief Constable. After hearing argument by counsel on both sides as to the construction to be placed upon the working of the Act, the Bench gave their decision, allowing the appeal and quashing the conviction.

**Presentation to a Woman Conductor.**—The directors of the Musselburgh and District Electric Light and Traction Company have presented a cheque to Mrs. May Ellis, who recently showed great presence of mind and averted a serious accident while acting as a conductor. A woman driver who had just received her licence to drive a car was thrown from the driving platform by a jerk as the car entered a loop. Mrs. Ellis hurried to the driver's platform, shut off the current and applied the brakes, thus promptly stopping the car. Had it not been stopped it would probably have been overturned.

**Smashing German Control in the Metal Industry.**—Reuter's correspondent telegraphed from New York on Monday the announcement of Mr. Palmer, U.S. Custodian of Enemy Property, that he has taken over the large German-owned metal concerns in New York of L.Vogelstein and Co., and Beer, Sondheiner and Co., with total assets of over $14,000,000 (£2,800,000). These, with other seizures, Mr. Palmer's statement declares, "smash for all time German control of the metal industry in this country." It is disclosed that the above companies were closely affiliated to the German Metallgesellschaft, and owned stock in numerous Austrian metal companies.

**Wage Increases.**—The Committee on Production have issued an award to men in the engineering, shipbuilding and allied trades, and in the ship repairing department in the Liverpool district, of 3s. 6d. per week to men aged 18 and over, and to boys, youths and apprentices under 18 of 1s. 9d. By previous awards the men have received advances over pre-war rates of not less than 20s. a week in the case of time workers, and 13s., plus an increase of not less than 10 per cent., in the case of piece-workers. In addition to these advances, grants have been made of a bonus of 12½ per cent. in the case of time-workers and 7½ per cent. in the case of piece workers.

**Company Promoting Fraud.**—At the Central Criminal Court on Monday, before the Common Serjeant, H. J. Lawson and S. A. Curzon, who were found guilty at the last sessions upon an indictment charging them with conspiring together to defraud such persons as should be induced to apply for shares in the General Omnibus Supply Manufacturing Company (Limited), were brought up for sentence. The indictment also charged the defendants with obtaining cheques from three persons by false pretences, and there were counts charging Lawson alone with applying sums of money belonging to the company to his own use or to purposes other than the purposes of the company. In a rider to their verdict the jury said they thought that, although Curzon became a party in the conspiracy, he was to some extent drawn into it by Lawson, and they recommended him to mercy. The Common Serjeant sentenced Lawson to 20 months' imprisonment in the second division, and Curzon to six months' imprisonment in the second division. Addressing Curzon, the Common Serjeant said he wished he could feel it consistent with his duty to let him off altogether, but he could not do that. He had no doubt whatever that Curzon was led into this by the plausible man Lawson. Curzon had a clean record.

**Damages against Glasgow Corporation.**—In the Court of Session was heard an action in which a ship plater sued the Corporation of Glasgow for £500 damages in respect of loss and injury received throughbeing knocked down by a tramcar while crossing a road. For the def ence it was urged that the car was on the point of being stopped at the stopping station when the claimant unexpectedly walked from the foot pavement across the tramway line, and got so quickly into the way of the car that the driver had not time to prevent the car from striking him. The jury found for the claimant with £500 damages. In the same Court a settlement was effected, by payment of £300 damages and expenses, in respect of injuries sustained by the overturning of a tramcar.

**Road Vehicles Adapted for Rails.**—The scarcity of means for carrying goods in Germany has led to various efforts to adapt ordinary road vehicles for running both on rails and on ordinary roads. The "Zeitschrife des Vereines deutscher Ingenieure" has described an under-carriage enabling a vehicle to run on tram rails or on ordinary roads which has been put into operation at Düsseldorf. If a vehicle is to be put on to the rails, it is driven so that the under-carriage is in register with the rails. The auxiliary wheels are then let down to engage with the rails. Each of the main axles of a road vehicle is provided with a pair of auxiliary axles with small running wheels. These auxiliary axles are situated on either side of the main axle, to which they are bracketed by swivelling arms. When running on roads all four auxiliary axles are raised from the ground, and the vehicle runs on its road wheels. When it is required to run on rails the auxiliary axles are let down and the load is wholly or partially transferred to the auxiliary wheels. This transfer is effected by operating a crank handle attached to chains by which the auxiliary axles are pulled downwards, thus raising the vehicle off its road wheels.

## PERSONAL.

**Mr. T. H. Hobson** has been appointed a representative of the London County Council on the Electrical Conciliation Board.

**Mr. A. Williams,** charge engineer, has been appointed cable and station superintendent of the South Lancashire Tramways

**Mr. Stanley Clegg,** electrical engineer and tramways manager, of Lincoln, has been granted an increase in salary of £250 a year.

**Captain Barker** has been appointed by Burnley Town Council consulting engineer at the electricity works for the remainder of the war.

**Mr. William R. Anderson,** cable and station superintendent, has been appointed resident engineer of the South Lancashire Tramways Company.

**Mr. H. H. Gordon** has resigned his membership of the Electrical Conciliation Board of the London County Council, owing to having joined H.M. Forces.

**Mr. R. Stuart Pilcher,** general manager of Aberdeen Corporation Tramways, has been appointed general manager of Edinburgh Corporation Tramways at a salary of £1,000 per annum. Further particulars of the appointment are given in another column.

**Mr. William E. McCombe,** the eldest son of Mr. W. J. McCombe, manager of Hull Corporation tramways, has won a classical exhibition at Worcester College, Oxford, from Hymers College, where he is senior prefect, cricket and football captain, and cadet officer of the O.T.C., in addition to being the editor of the "Hymerian," the college magazine.

We regret to record the death of **Mr. T. Hayes**, resident engineer of the South Lancashire Tramways Company. He had been connected with the company for the past fourteen years.

The death has occurred in Berlin of **Herr Arnold von Siemens,** at the age of 65 years. The deceased was the eldest son of the late Werner von Siemens, and a director of the Siemens and Halske Company, and of the Siemens-Schuckertwerke.

**Captain George Leonard Andrews, R.G.A.,** of Sheffield, electrical engineer, who had held positions under the tramway companies of Kidderminster, Madrid, Hull, Sunderland, and Lisbon, and has been manager of the Para Electric Railways and Lighting Company, who was killed in action on May 3, has left estate valued at £2,193.

## FINANCIAL REPORTS AND MEETINGS.

**Croydon Corporation Tramways.**—There was a surplus of £11,220 on the Croydon tramways last year.

**San Paulo Tramway Light and Power Co., Ltd.**—A dividend of 2½ per cent. on the common stock has been declared.

**Mather and Platt.**—An interim dividend of 5 per cent., less tax, for the half-year ended June last has been announced.

**Metropolitan Railway.**—A dividend for the half-year at the rate of 1 per cent. per annum on the ordinary stock and of 2¾ per cent. on the surplus land stock. The rates are the same as a year ago.

**Stewart and Lloyds.**—An interim dividend for the half-year ended June 30 last has been declared at the rate of 6 per cent. per annum on the preference shares and of 10 per cent. per annum on the preferred ordinary shares.

**Liverpool Overhead Railway Co.**—An interim dividend for the half-year ended June 30 is announced at the rate of 5 per cent. per annum on the preference shares and 2½ per cent. on the ordinary shares. A year ago the rates were the same.

**West Bromwich Corporation Tramways.**—A summarised statement of the annual report shows that on the tramways undertaking the deficit for the year was £545, and after deducting the credit balance from the previous year there remains a deficit of £81 13s. 9d.

**Hull Corporation Tramways.**—For the three months ended June, the expenditure on the tramways increased by £10,459. The total amount received in fares for the quarter was £51,691, an increase of £8,867 on the corresponding quarter of last year. The quarter's working showed a deficit of £889. At the corresponding date last year there was a surplus of £631.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended July 24, amounted to £67,837, an increase of £9,577 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to July 24 (sixteen and a half weeks), the total receipts were £1,028,899, an increase of £121,231 on the corresponding period of 1917.

**Brown Bayley's Steel Works.**—The directors recommend that a new company be registered, with a capital of £800,000, divided into £300,000 ordinary shares and £500,000 preference shares, and that the shareholders in the old company be allotted four £5 ordinary shares for each old £10 share and two £5 ordinary shares for each old £5 share. The directors also propose to offer £300,000 5 per cent. cumulative preference shares to present proprietors and their friends for cash, the dividends to be free of tax. Treasury consent has been obtained to the issue.

**Keighley Corporation Tramways.**—The report showed a marked improvement in revenue as a result of the adoption of the uniform penny fare for all journeys. On the town track system there had been an increase for the past year of £2,042. War allowances and bonuses, however, had gone up by £683, and other working expenses £53. The reduced evening services had dropped the car miles run by 35,417, and the passengers carried during the year had numbered 3,088,807, a diminution of 413,847. The receipts per car mile had increased from 11·2d. to 15·8d. In spite of increased revenue, there had been a loss on the trackless system of £457. It was suggested that a further increase of fares would have to be adopted. The gross profit for the year had been £3,178, and after meeting interest and sinking fund charges there was a net surplus of £1,211. It was proposed to pay out of this debts on the trackless undertaking of £762 and on the tramways of £279, carrying £170 to reserve.

## SHEFFIELD CORPORATION TRAMWAYS.

The report for the year ended March 25, 1918, shows that £14,128 was expended during the year on capital account, and that the total capital expenditure now stands at £1,230,495. The revenue account, which is summarised below, reveals a gross profit of £176,769. The motor omnibus section provided a net balance on the year's working of £4,041, and this sum has been transferred to the special reserve fund. A further increase of 5 per cent. was made on December 25, 1917, in the price charged for electrical energy and from June, 1918, another advance of 8⅓ per cent. came into operation, making a total increase of 33⅓ per cent. on the pre-war figures.

On May 12, 1917, the ½d. fare stages for adult passengers were discontinued on all routes. During the year a settlement was arrived at with the Income Tax Commissioners with respect of the income tax account for the tramway undertaking covering the period from 1900-1 to 1913-14 inclusive. This settlement gave a total net relief of £16,169 for the period referred to and of this sum an amount of £10,779 has been paid into the tramways renewal fund, the remaining balance of £5,389 being transferred to the relief of the General District Rate.

## CONTRACTS AND ORDERS.

**Glasgow Tramways Committee** have placed a contract with Hadfields, Ltd., for special work.

**Southend Light Railways Committee** have ordered an electric welding plant from Scott Anderson.

**Belfast Electricity Committee** have placed a contract for the supply of cables with Callender's Cable and Construction Company.

**The British Westinghouse Company** have an order from Belfast Electricity Committee for a 1,000 kw. transformer at £1,305.

**Edison Accumulators, Ltd.,** who some time ago received an order for two 2-ton tipping wagons from Glasgow Corporation cleansing department, recently informed the Corporation that it was improbable that the two chassis, which were being made in America, would, owing to transport difficulties, be delivered this year. They offered with a view to giving early delivery to substitute other chassis at the same price as those specified in the contract, and the department has agreed to accept the substitution.

## BUSINESS NOTICES.

**The Normalising of Steel** is the subject of a leaflet issued by Automatic & Electric Furnaces, Ltd., 6, Old Queen Street, S.W.1. It is stated that the instructions contained in the leaflet refer to carbon steel and are the result of practical experience of hardening some thousands of screw gauges, etc., and it would appear that the leaflet would be of use to many manufacturers.

**Rubber Tires.**—An attractive eight-page folder has been issued by Charles Macintosh & Co., Ltd., of 120, Wilton Road, S.W.1, setting forth the advantages of their solid rubber tires for steam wagons and tractors and especially as compared with steel tires. A testimonial from a firm doing a large amount of hauling work of heavy machinery all over England, gives a strong endorsement to the merits of these tires. Illustrations show types of engines fitted with Macintosh solid rubber tires. The folder should produce inquiries and business.

**Guest, Keen & Nettlefolds, Ltd.**—Following the death of the late chairman, Mr. Arthur T. Keen, the Earl of Bessborough, K.P., has been elected chairman of this company, and Mr. F. W. Keen and Mr. Edward Steer, deputy-chairmen. Lieut.-Col. the Hon. C. H. C. Guest, M.P., and Mr. H. Probyn, who has held the position of secretary of the company since its formation, have been appointed to seats on the board. An Executive Committee of general managers has been formed. Mr. J. H. Jolly, at present secretary of the Blaenavon Co., Ltd., has been appointed to the post of secretary and chief accountant.

**Gloucester Carriage and Wagon Co.**—The report for the year ended May 31st. states that profit, after making usual provision for depreciation, war dependants, contingencies and internal reserves, was £83,841, and the disposable balance, after deducting interim dividend, £113,609. The directors transfer £10,000 to reserve (making it £200,000), and recommend a dividend at 10 per cent. per annum, less tax, making 10 per cent. for the year, and a bonus of 5 per cent., free of tax, carrying £51,109 forward. The wagon repairing branch has, as at 31st March, been transferred to Wagon Repairs, Ltd., the assets, however, remain in the balance-sheet in lieu of shares in Wagon Repairs, Ltd , to be issued.

## LONDON UNIVERSITY AND COMMERCE DEGREES.

A scheme to establish commercial education and degrees in commerce in connection with London University was the subject before an influential gathering at the Mansion House on Thursday July 18. The Lord Mayor presided and prefaced his opening remarks by reading a letter from Dr. Addison, M.P. (Minister of Education), and expressing hearty sympathy with the object of the meeting, which was to support the scheme. Proceeding, the Lord Mayor expressed his own approval of the scheme and his willingness to help it in any way he could.

The principal speaker was the Rt. Hon. A. J. Balfour, M.P., who was received with loud and continued applause. After referring to his representation of the City in Parliament, Mr. Balfour spoke of the advantages of a training in university lines and of the interest of the subjects which will have to be studied in the course of preparing for a commercial degree, and expressed the opinion that the University would be doing a most valuable work in carrying out the scheme.

The scheme was also commended by Mr. R. C. Norman (Chairman of the L.C.C.).

A resolution approving the institution of degrees in commerce by the University of London, promising assistance in obtaining financial support and appointing a committee, was carried unanimously, on the proposition of Sir R.V. Vassar-Smith, Bart. (Chairman of Lloyds Bank), seconded by Sir Robert M. Kindersley. The committee includes several of the best known men in the banking, manufacturing and commercial worlds.

The proceedings concluded with a vote of thanks to the Lord Mayor and the speakers, proposed by the Vice-Chancellor of the University of London (Sir Cooper Perry) and seconded by Sir Albert K. Rollit.

Briefly explained, the intention of the scheme is to found lectureships in commercial subjects in the colleges of the University, such as the London School of Economics; to organise a bureau to assist and advise students working by themselves; to create and subsidise a commercial literature suitable for the rising generation of business men; and to found and endow travelling fellowships and scholarships in commerce with a view to promoting the study by Englishmen of commercial languages and methods in every country abroad where the development of British commerce may reasonably be expected. The Lord Mayor has consented to act as Honorary Treasurer of the fund to promote these objects; and it is to be hoped that a generous response by the City and the country will enable the University to carry out successfully what promises to be one of the most important schemes for helping the nation to prepare for the inevitable economic struggle which will follow the war.

## WEEKLY LIST OF TENDERS INVITED.

### CITY OF LEEDS.

**Electricity Department.**

**Extensions of Generating Plant.**

The LEEDS CORPORATION desire to contract for the purchase of the following:—

Contract No. 1.
EXTENSION to FEEDER SWITCHGEAR in new works (three-phase).

Contract No. 2.
ALTERATION of GENERATOR SWITCHGEAR in old works (two-phase).

Contract No. 3.
ONE TURBO-ALTERNATOR and JET CONDENSING PLANT (two-phase), fifty periods, 2,100 volts; capacity, 6,000 kilowatts, at ·75 power factor; steam pressure, 170 lb. per sq. inch; vacuum, 27½ in., with barometer at 30 inches; speed, 1,500 revolutions per minute.

Contract No. 4.
TWO WATER TUBE BOILERS, STOKERS, ECONOMISERS, INDUCED DRAUGHT PLANTS, UPTAKES, DUST CATCHERS, and CHIMNEYS.

Contract No. 5.
COAL AND ASH CONVEYING PLANT, COAL SHOOTS and VALVE and ASH HOPPER FRAMES.

Contract No. 6.
STEAM, FEED, WATER, CIRCULATING WATER, AND BLOW DOWN PIPES, including ERECTION, for NEW WORKS.

Contract No. 7.
STEAM, FEED, WATER, CIRCULATING, and OTHER PIPES, for OLD WORKS (SUPPLYING MATERIALS ONLY).

Contract No. 8.
LARGE CENTRIFUGAL PUMP, capacity 3,600,000 gallons per hour, or thereabouts, against a head of 33 feet, running at 235 revolutions per minute.

Tenders will be invited from selected firms.

Makers who are willing to tender for one or more complete contracts, and able to guarantee completion and erection within twelve months under P.4 Certificate, are requested to submit to me their names and the names of their sub-Contractors (if any) by Saturday, August 10, 1918.

C. NELSON HEFFORD.
Manager.

1, Whitehall Road, Leeds.
July 31, 1918.

## POSITIONS VACANT.

### BOROUGH OF ST. MARYLEBONE.

**Electric Supply Department.**

**Appointment of Assistant Mains Engineer.**

Applications are invited for the post of Assistant to the Mains Engineer at an inclusive salary of £6 per week.

Candidates must have had distribution experience, and are requested to give detailed particulars, accompanied by copies of recent testimonials, addressed to

THE ACTING CHIEF ENGINEER.
19, York Place, London, W.

### EBBW VALE URBAN DISTRICT COUNCIL.

**Resident Electrical Engineer.**

The District Council invite applications for the appointment of a Resident Electrical Engineer. Salary £250, rising by annual increments of £10 to £300 per annum.

Candidates for the position should have had experience of the erection and maintenance of a large overhead distribution system, be conversant with the management of a Municipal Electricity Undertaking with over 1,000 consumers, and shall also have had experience in the management of an Installation Department. The District Council have no generating station, but purchase current in bulk.

The successful applicant will be required to devote his whole time to his duties, and not engage in other work.

Applications (stating age, qualification and experience), accompanied by copies of three recent testimonials, should be enclosed in a sealed envelope, endorsed on the outside "Engineer," and should be delivered at my office not later than August 12, 1918.

THOS. HUGHES,
Clerk.

Dated the 19th day of July, 1918.

### SENIOR ASSISTANT ELECTRICAL ENGINEERS.

The Newcastle-upon-Tyne Electric Supply Co., Ltd., have now several vacancies for Senior Assistant Electrical Engineers for Power and Sub-station work; preference will be given to men who have previously served with the Company as Junior Assistant Engineers, and have been discharged from the Army or Navy.

Applicants must have had experience with large motor generators and rotary converters.

Wage £3 2s., plus 12½ per cent. per week, with time and a half between 10 p.m., Saturday and 10 p.m. Sunday.

Fourteen days' holiday will be granted with full pay for each twelve months' service with the Company.

Applications in writing giving full particulars of theoretical and practical training, together with copies of references and date on which duties could be commenced, should be addressed to THE ENGINEER, Operation Department, Carville Power Station, Wallsend-on-Tyne.

### MEXBOROUGH URBAN DISTRICT COUNCIL.

**Electricity Department.**

**Charge Engineer.**

Required immediately, Charge Engineer with experience of D.C. 3-wire station combined with refuse destructor. Wages £2 12s. per week of 56 hours, plus 12½ per cent.; all overtime paid.

Apply stating age, experience, together with testimonials, to the undersigned.

Electricity Works, Mexborough.
J. B. FELTHAM, A.M.I.E.E.
Engineer and Manager.

### RHONDDA URBAN DISTRICT COUNCIL.

**Electricity Department.**

Junior Switchboard attendant wanted, 8-hour shifts; knowledge of A.C., 3-phase supply a recommendation. Good opening for student. Wages 29s. 6d. per week, plus 9s. war bonus and 12½ per cent. Only applications from those ineligible for the Army will be considered. State age, experience, together with copies of testimonials to be sent to the undersigned.

Electricity Works, Porth, Rhondda.
J. M. BOWMAN,
Engineer and Manager.

### RADCLIFFE URBAN DISTRICT COUNCIL.

**Shift Engineer.**

Shift Engineer wanted, with previous experience in direct current three-wire and traction supplies, high-speed direct coupled steam sets. Experience with rotary converter equipments will be a recommendation. Wages £3 5s. plus 12½ per cent. per week of 56 hours. Certified Undertaking.

Applications, giving experience, age, to be sent to ENGINEER AND MANAGER, Electricity Works, Lomax Street, Radcliffe, Lancs

SATURDAY, AUGUST 3, 1918.

## PRESENT NEEDS OF THE M.T.A.

The resignation of Mr. C. J. Spencer of the position of general manager of Bradford Corporation tramways, which he has ably filled for twenty years, will be received with special regret by his colleagues of the Municipal Tramways Association. While they will congratulate him on the recognition which his ability has received and the larger field of activity which he will have in the Metropolis, they will be sensible of the fact that it will not be easy to fill his place as honorary secretary of the Association. Mr. Spencer was one of the original members, and for a number of years he has ,at no little personal inconvenience, served it as honorary secretary both before and subsequent to his year of office as president. The change will no doubt lead to a decision of the question whether the time has not now come when the Association should have a paid secretary and permanent offices in London. Some time ago Mr. Spencer intimated that it would be impracticable for him to continue to give the time necessary to the work, and it was only at the earnest solicitation of the Council that he has continued for the last two years. Had he remained at Bradford it would have been necessary for the Association either to find a new honorary secretary or decide upon the appointment of a permanent official. The work constantly increases in extent and importance, and if municipal tramway interests are to be adequately represented in the future there is no doubt that a more extensive organisation of the work must be arranged. Considering the magnitude of municipal tramway interests, the question of expense should give rise to no difficulty, and it is to be hoped that an adequate salary will be attached to the position of secretary. The responsibilities which will fall upon that officer are considerable, and the salary should not be less than that of managers of the larger municipal systems. The withdrawal of the manager of another important municipal tramway in order to enter company employment will no doubt lead the Corporations of some other towns to consider whether the salaries they now pay to their tramway managers are in the circumstances of the present-day adequate. The traffic of many tramways has increased very largely since the salaries were fixed, and the managers' responsibilities have been greatly enlarged without adequate recognition of the change in the scope and extent of their work. In some of the systems of average size the salaries paid are quite inadequate. In view of the increases granted by the Government to civil servants it is clearly time that municipalities should recognise their obligations towards their tramway officials.

## L.C.C. TRAMWAY MATTERS.

The London County Council held its last meeting before the summer recess on Tuesday, when a number of reports relating to the tramways were received.

### Legal Proceedings.

The Highways Committee reported that two persons were fined for obstructing tramcars, four for assaulting tramway conductors (one of the defendants being ordered to make a payment to the woman conductor concerned) and one person was fined for assaulting an inspector. One person was prosecuted for refusing to show his ticket when requested to do so, but the summons was withdrawn on payment of 2s. costs and the amount of the fare ; one person was fined for refusing to pay his fare, two persons were prosecuted for attempting to avoid payment of fares, the summons being dismissed in one case and a fine being inflicted in the other. Proceedings were taken in eight cases in which defective vehicles broke down on the tramway track and a fine was imposed in each case. Between May 24 and July 18, sixty persons were fined for spitting on cars. From this large number of convictions the Highways Committee think it will be understood by the public that the by-law against the objectionable practice of spitting on the cars is being rigidly enforced.

### Through Running on the Metropolitan Tramways.

The Highways Committee reported that for a long time past they have been in negotiation with the Metropolitan Electric Tramways Ltd., with a view to the institution of through running arrangements between the Council's tramways and those of the company, at Stamford Hill ; and the Local Government Board have recently been in communication with the Council with the object of ascertaining the result of the negotiations.

Owing to the difficulties of equipment and maintenance it would not be practicable for the company to undertake the operation of additional through running services, *via* Stamford Hill, at the present time, but an arrangement has been agreed to provisionally with the company on the basis of the extension of certain of the Council's services beyond Stamford Hill to Seven Sisters Corner, a distance of 67 miles. The principal heads of the proposed agreement are as follows :—

The Council to operate all cars over the section between Stamford Hill and Seven Sisters Corner ; to pay one-half of the cost of the change point to be constructed at Stamford Hill ; and operate a mileage over the Council's tramways on existing through running services equivalent to the additional mileage to be operated by the Council over the Company's tramways between Stamford Hill and Seven Sisters Corner. The Council may require a revision of terms if it can be reasonably shown that the earnings of services terminating at Stamford Hill have been prejudiced by the extension of services over the company's tramways.

An extension of the tramway services to Waltham Cross or intermediate points is to be arranged as soon as the necessary additional cars can be equipped. In other respects the arrangements are to be similar to those already in operation on through running services with the company.

It will be necessary to incur certain capital expenditure before the arrangement can be put into operation, and the total cost is estimated at £4,825, which includes provision for a lay-by in Amhurst Park, construction of a change point at Stamford Hill, and the equipment of cars. Towards this expenditure the company will contribute £875, *i.e.* one half of the cost of constructing the change point. The Committee anticipate that the arrangement will prove as beneficial as other through running services.

### Award of the Committee on Production.

The terms of the award dated July 9, issued by the Committee on Production, were reported by the Highways Committee, who recommended that the award should be applied to the employees concerned in the tramways department. The estimated cost, including the provision for payments to minor officials, is £63,500 for the remainder of the current financial year, and £88,000 for a full year.

The rate of pay of foremen washers in the rolling stock branch has been fixed at from 40s. to 45s. a week, and the Highways Committee recommend that the maximum should be increased by 5s. a week.

### Fares Less Than Statutory Requirements.

The General Purposes Committee submitted the following observations of the Highways Committee on the report of the Select Committee on Tramways (Statutory Requirements) :—

The maximum fares authorised on the Council's tramways are one penny a mile (ordinary) and two miles for one penny (workmen's.)

Digitized by Google

The fare alterations approved by the Council on May 7th, 1918, are based on the division of the tramway system into sections approximately .6 of a mile in length. Three sections may be traversed for a 1d. fare, six sections for a 2d. fare, and nine sections for a 3d. fare, with a maximum fare of 4d. for a continuous journey on one car. The average 1d. stage is, therefore, approximately 1.8 miles.

With regard to workmen's fares, the revised rate for single journeys are four sections for 1d., which is equivalent to approximately 2.4 miles, with a maximum of 2d. The return fares are 2d. for a journey of four sections in each direction, with a maximum return of 3d.

From these particulars it will be seen that the fares charged by the Council are still considerably below the authorised maximum, and there appears to be no immediate prospect of the application of that maximum becoming necessary.

In the circumstances, the Highways Committee are of opinion that there is no need, so far as the Council's undertaking is concerned, that any action should be taken in the matter at present.

The Housing of the Working Classes Committee state that they entirely concur in the proposal, which they understand will be put forward in the form of an amendment to a Bill for giving effect to the recommendations of the Select Committee, that the local authority concerned shall be given an opportunity of expressing its views before the Board of Trade issue an Order, as suggested by the Select Committee.

MUNICIPAL TRAMWAYS ASSOCIATION CONFERENCE.

On the understanding that the Council was in no way committed as to its policy in regard to matters to be discussed at the Conference of the Municipal Tramways Association, the vice-chairman of the Highways Committee (Mr. A. H. Scott), and Mr. W. J. Squires were appointed to represent the Council at the Conference to be held in Leicester, in September, 1918.

The next ordinary meeting of the Council will be held on Tuesday, October 15.

## A BILL TO INCREASE STATUTORY CHARGES.

SECOND READING IN THE HOUSE OF LORDS.

The Statutory Undertakings (Temporary Increase of Charges) Bill, the text of which as amended in the House of Commons, was given in our last issue, was read a second time in the House of Lords on Monday.

In moving the second reading, Lord Somerleyton urged the necessity of the Bill on account of the enormous increase in the cost of production, wages having risen from 60 to 100 per cent., and materials from 100 to over 200 per cent., and there having also been restrictions on the amount allowed to be consumed. In regard to the amendment to the original proposal in the Bill, which was carried in the House of Commons by which a dividend was allowed on ordinary shares or stock at ¾ (instead of as originally proposed, ½) the standard or maximum rate of dividend, if any, prescribed or at ¾ (instead of ½), the pre-war rate of dividend, whichever was the lower, his lordship said this alteration was carried by large majorities in Committee of the House of Commons and on the third reading, and referred to the further increase in the cost of production due to a rise of 4s. per ton in the price of coal. He also mentioned that the provision that the Act should have effect until the expiration of a period of two years after the war, in accordance with the recommendations of the Committee on Tramway Undertakings.

The Marquess of Crewe, while not opposing the second reading, objected to the substitution of ¾ for ½ as regards the rate of dividend allowable, a change that has been attributed to pressure which was put upon M.P.'s in the interests of the undertakings.

Lord Balfour of Burleigh was in favour of granting full relief to companies which could show that for twenty years past what they had set aside as a reserve fund, did not amount in all to more than one fortieth part of their annually divided profits; partial relief in respect of one twentieth, and less or no relief for one tenth. He proposed to move an amendation on these lines in committee.

Lord Buckmaster, while not opposing the second reading, also expressed himself against the alteration from ½ to ¾.

Lord Parmoor thought the Bill a dangerous one for companies whose rights depended upon statute; as it would be a precedent, under different conditions for diminishing rights. It was dangerous to inferfere with a statutory charter. Were all the prices to gas consumers, and all the profits of gas companies to be placed under the jurisdiction either of the Local Government Board or the Board of Trade? The effect of the Bill was to substitute the action of a department for a statutory parliamentary protection.

The Earl of Plymouth supported the Bill.

The Earl of Donoughmore, referring to a remark about the influence exerted by companies on M.P.'s spoke of the efficiency with which a body with which Lord Crewe was concerned, the London County Council, placed its views before Parliament.

Replying on the debate, Lord Somerleyton said applications of companies under the Bill if it became an Act, would be dealt with on their merits, and it was not to be assumed that all would get equal relief. It ought to be borne in mind that the companies with which the Bill dealt were under statutory obligations, and had to continue their business whether it paid or not.

Having been read a second time, the Bill was committed to a Committee of the whole house, and it was stated that it was proposed to take the committee stage yesterday (Friday).

## INCREASED FARES.

Colne Town Council have adopted a revised scale of tramway fares as follows:—1d. fares to be raised to 1½d., 1½d. fares to 2d., 2d. to 2½d., 2½d. to 3d., 3d. to 3½d., and 3½d. to 4d. It has been decided to use a token representing a 1½d. fare, which can be purchased at 7½d. for six, or 1s. 3d. a dozen. The reason which has led to the revision was increased cost of working the system, which it is estimated, will be fully 35 per cent. at the end of the present year. The revised scale will, it is estimated, mean an increase in the revenue earning capacity of the system of 20 per cent.

The Hull Corporation Tramways Committee propose that the halfpenny tram fares in Hull after nine o'clock in the morning, shall be suspended from August 5. The decision is understood to follow from the fact that there has been a loss during the past quarter of £889. The deficit is attributed to the increased wages. The committee is faced with an additional charge of between £5,000 and £6,000 for wages, owing to the result of a recent arbitration.

Revised fares came into operation on the Cardiff Corporation tramways this week. The increase is a halfpenny for any stage, with a minimum fare of three-half pence.

The Perth Corporation Tramways Committee are recommending increases to the extent of about a halfpenny for each stage.

Penny fares have been suspended on the Dewsbury tramcars. The secretary of the Yorkshire (Woollen District) Electric Tramways Company has stated that the staff had been so depleted that the tramway service would have to be further reduced, and that unless steps were taken to discourage short distance riders the longer distance passengers would be crowded out, and in order to prevent this the Company proposed to suspend penny fares, charging 1½d. for the first mile, instead of one penny, and leaving long distance fares as at present. The Electricity Committee of the Dewsbury Corporation disapproved the proposed increase, being of opinion that the present fares are quite high enough in comparison with other tramway services in the West Riding. The Tramway Company have, however, introduced the 1½d. fares for short journeys on some routes.

Preston Town Council has decided to increase all tramway fares (except workmen's and children's) by a half-penny, and to raise the fare for the circular route from 2d. to 3d. The decision was carried by a small majority. The Chairman of the Tramways Committee, Alderman Ormrod, stated that the increase was considered necessary owing to the constant increase in working expenses. They must increase the revenue or get assistance from the rates. In making their decision the committee had also been influenced by the fact that the great majority of tramway undertakings had had to face the same difficulties, and had raised their fares, while the railways had increased their rates to 1½d. per mile more than 18 months ago. Subsequently, replying on the discussion, Alderman Ormod said that at Blackburn the increase of fares had resulted in a falling off in the number of passengers carried, but an increase in the revenue. In Preston the cars were very much overcrowded, and six more cars were to be put on. That meant more expenditure, and in addition much of the permanent way needed relaying, and a new engine was wanted at the power station. He did not look for a greatly increased revenue, but an increase in expenditure was unavoidable.

## MR. C. J. SPENCER'S LONDON APPOINTMENT.

The acceptance by the manager of an important provincial tramway of a London appointment, which was indicated in last week's issue has now been formally announced. Mr. C. J., Spencer, general manager of the Bradford Corporation Tramways, is leaving the position which he has held with much success for twenty years to takeup an executive appointment with the London Underground group. In the course of his letter of resignation, Mr. Spencer writes: "I was appointed your tramways general manager in March, 1898, and have, therefore, been in your service over twenty years. I have seen the system grow from very small beginnings to one of very great magnitude. The first year of operation the receipts for the city tramways were £8,870. Last year the figure was close on £400,000, and it is estimated that the current year will result in revenue of close upon half a million. You will, therefore, realise that to break away from an organisation which has been my constant thought and care for twenty years is not a step to be lightly taken, and had it not been for the possibility of much wider activities, coupled with a very substantial financial inducement, that step would not have been taken. . . . . I sincerely hope that the future of the Bradford Tramways Department and of the city generally will be everything that its well-wishers could desire. I shall always take a keen interest in your doings, and be pleased with your successes." The resignation was accepted, and several members of the Tramway Committee expressed their sense of the value of Mr. Spencer's services and their regret that these should now be lost to Bradford. Mr. Spencer, who was born at Halifax, in December, 1875, has, says the *Yorkshire Post*, been manager of the Bradford Tramways for 20 years, and during his service the tramway service has expanded greatly. The traffic receipts have advanced from £8,000 to £500,000, the estimated receipts for the current year. Mr. Spencer served his pupilage with the Blackpool Electric Tramways Company, and later accepted an appointment with the South Staffordshire Tramways Company. During the war his services have been utilised by the Admiralty for over a year. Mr. Spencer's resignation will take effect on November 1st.

## LEEDS CITY TRAMWAYS.

The report of Mr. J. B. Hamilton, general manager of the Leeds City tramways, for the year ended March 31, 1918, states that the receipts amounted to £586,631, an increase of £70,824. The working expenses, on the other hand, at £314,042, show an increase of £53,157, leaving a gross profit of £272,588, an increase of £17,668. The increased costs are attributed mainly to increases in wages, which amount approximately to £43,000 more, while the annual cost of war bonuses to employees amounts to £90,000. Material has, of course, greatly increased in value and among the items is an increase of £3,543 under the head of ticket check, largely due to the increased cost of paper. An advance in the price of coal of 2s. 6d. per ton authorised by the Coal Controller in 1917 has added £1,200 to the fuel bill. Owing to the 50 per cent. advance in railway fares, there was an increase of 57 per cent. in the number of through tickets issued beteen Leeds and Bradford. A summary of the income and expenditure account and of the application of the gross profit for the past four years is appended.

| Year ended March 31 | 1918. | 1917. | 1916. | 1915. |

## REDUCTION OF SERVICES.

A meeting of the Board of Trade Advisory Tramways Committee of the Lancashire, Cheshire, and North Wales districts this week in Liverpool, considered the question of economising of coal in the generating of electricity. It was decided that the present supply must be curtailed by 15 per cent. This new departure will probably affect the tramway system, resulting in a reduction of the services, although considering the large amount of work of national importance that is being done in Liverpool it is not expected that the service there will be very much restricted.

Glasgow Corporation has given power to the Tramways Committee to make reductions in the service, if need be, on the understanding that any curtailment necessary in the late car service shall take the form of modification of the existing time-tables, and that only as a last resource shall an hour be cut off the evening service. Explaining the position, the chairman of the Tramways Committee (Councillor Montgomery) said that it had been expected that a great number of the employees would be called up for military service, and it was to meet the situation which would be thus caused that it had been proposed to withdraw the night cars an hour earlier. But the men had not been called up yet, and the service was continued until the Council had reviewed the matter. They had recently lost 200 employees from the service, between 600 and 700 were working seven days a week, and a large number of drivers had not had a holiday for four years. There were, also, fifty cars in depot because they had neither men nor materials to repair them, and the Coal Controller had informed them that their coal consumption must be reduced by 15 per cent. The present service would be continued as long as possible.

From a letter which has appeared in the *Nottingham Guardian* from Mr. R. H. Swain, the chairman of the Tramways Committee, it would appear that not only is there to be a reduction in the Sunday running of the cars at Nottingham, but there is a possibility that the committee may be compelled to suspend the Sunday service entirely, as well as to curtail the weekday services. Mr. Swain writes: "There are two reasons why the cars are being stopped on Sunday mornings. The first is because we have not sufficient men to keep the present services running, and the second is that we are called upon by the Government to use less coal. Most of my correspondents are asking that the cars be run for an hour or two on Sunday morning to enable people to get to and from places of worship. This would not meet the Government requirements, as if steam had to be raised to provide the electricity required to run the cars for this purpose and get them back to their depots, we might almost as well not stop at all. In addition to the question of coal it is necessary for the safe working of the undertaking that drivers should have a weekly rest day, and the proposed Sunday morning suspension will assist this to be done by releasing nearly 40 drivers for the day. I wish also to warn people that if the supply of coal and electricity has to be cut down further we shall be compelled to stop Sunday running entirely, and it is quite within the bounds of possibility that the week-day services will be also curtailed."

## ELECTRIC OMNIBUSES FOR RIO JANEIRO.

The Brazilian Traction, Light and Power Company have obtained from the Commercial Truck Company, of Philadelphia, some electric accumulator omnibuses to be used on routes not served by their tramways in Rio Janeiro. According to particulars given by the *Electrical World*, of New York, the omnibuses are of the single deck type and have a seating capacity for thirty-two passengers. The vehicles are equipped with an Edison battery of 72 cells, with a rated capacity of 350 amperes hours. General electric motors are placed on all of the four wheels, the drive being through concentric gearing with a ratio of 12·14 to 1. With a full load on good level roads the vehicle can run thirty-five miles on a single charge, and with half the full complement of passengers, forty miles. Each omnibus can make twelve round trips during the day of 2·26 miles, giving a total daily mileage of 27·12, the running time being four hours, or twenty minutes per trip, with a total of twenty-four stops. During the tests the power consumption worked out at 294 ampere hours, the initial voltage of 89 dropping to 73 at the completion, the running time being 3 hours 59 minutes. At the start the battery temperature was 100° F., and at the finish 105° F., the air temperature being steady at 58° F. The omnibuses were run from Philadelphia to New York, a distance of about 150 miles, under their own power. On the first car the vestibules were packed on the chassis for shipment, the main bodies being packed in crates carried on the second chassis.

## MISCELLANEOUS NEWS AND NOTES.

**Summer Coats** are supplied by the London County Council to the women conductors on its tramway system.

**Car Damaged by Runaway.**—When a pony yoked to a van bolted in Glasgow, and ran into a tramway car, the shafts of the van penetrated the side of the car, and a woman passenger complained of shock.

**Payment for Electric Power.**—The L.C.C. has agreed that the increase of 10 per cent. in the price paid for power supplied by the London Electric Supply Corporation, Ltd., to the tramways undertaking shall be payable as from January 1.

**Sale of London Cars.**—Twelve cars have been sold to the Bexley Urban Council by the L.C.C., at £550 each, subject to 5½ per cent. paid for each car until receipt of the purchase money. A quantity of old tramway materials has also been disposed of by the L.C.C. for £6,577.

**Coke for Power Station.**—At the Greenwich power station of the L.C.C. tramway system, coke has been used more extensively of late. Arrangements have been made with the South Metropolitan Gas Company for the supply of from 100 to 1,000 tons of coke per week for 12 months.

**Municipal Tramway Association Conference.**—The annual conference will be held at Leicester on Thursday and Friday, September 26 and 27, under the presidency of Alderman S. Flint, J.P., chairman of the Leicester Corporation Tramways Committee. A full programme will be published later.

**About Government Controllers.**—Sir George Lunn, the Lord Mayor of Newcastle, speaking at the annual meeting of the Newcastle Chamber of Commerce this week, said the nationalisation of everything had had a demoralising effect, and as soon as the war was over all the Controllers must go.

**Tramway Expenditure** sanctioned by the London Highways Committee during the quarter ended June 30, included £3,640 for rewinding of armatures for electric cars; £1,250 for 50 tons of fish plates; £97 for transport of rails from Messrs. Hadfields' works at Sheffield to London; £1,480 for two miles of cable; and £570 for 100 rolled steel bars.

**L. U. T. Bill in House of Lords.**—At a meeting of the Heston-Isleworth Urban Council a letter from the London United Tramways, Ltd., stating that three local authorities were petitioning against the company's Bill in the House of Lords, and asking the Council if it would give evidence in support of the Bill, was referred to the General Purposes Committee.

**Demands of the Call-Up.**—Mr. W. MacGibbon, local manager of the Dewsbury and Ossett Tramways, has informed the Dewsbury Corporation Electricity and Tramways Committee, that his men have been called up to such an extent that unless time is allowed to train others, the services between Dewsbury and Ossett and Earlsheaton will have to be entirely suspended.

**Women Leave Work.**—Women employed by Lanarkshire Tramways Company left work on Monday morning because they did not get an advance of 5s. weekly with the men. Much inconvenience to the travelling public resulted. In the afternoon the strikers accepted the advice of a representative of the Ministry of Munitions and decided to return to work, pending a consideration of their claim.

Digitized by Google

**New Cars for Aberdeen.**—Aberdeen Corporation tramways are constructing three open deck cars.

**Women Drivers.**—Licenses for women tramway car drivers will not, according to a statement made at Ilford Council last week, be granted if discharged soldiers are available.

**Proposed Edge Hill Light Railway.**—The Light Railway Commissioners have submitted to the Board of Trade the confirmation of an order for the construction of a light railway in the Edge Hill district.

**Montreal Tramway Strike.**—A telegram to the *Times* states that 3,500 employees of the Montreal Tramways Company have decided by a practically unanimous vote to strike for increased wages.

**Eight Hours' Day Suggestion.**—At a meeting of the Dublin Branch of the Amalgamated Association of Tramway and Vehicle Workers, Mr. J. J. Brogan, the secretary, said the tramway workers should insist on an eight hours' day.

**Edinburgh Women Conductors' Claims.**—The women employees of the Edinburgh and District Tramways Company are dissatisfied that they are not receiving the advance recently awarded to men transport workers and now being paid to the men employees of the company. No action is expected to be taken until next week, when it is expected that national action will be taken.

**Tram Car Detectives in Berlin.**—Bitter indignation, says the *Daily Mail*, is aroused by the decision of the Berlin Metropolitan Tramways Company to instal its own plain-clothes detective force for the purpose of catching people trying to travel without payment of fare. The company's sleuths are to be empowered to mulct every apprehended miscreant in a 1s. fine on the spot. The *Lokal-Anzeiger*, in a furious comment on the "high-handed" scheme, says that the public will not stand it.

**Threatened Strike of London Women Conductors.**—There is a talk of a strike among the women conductors on the London County Council cars on the August Bank Holiday in order to express disapproval of the granting of the last 5s. bonus to male conductors and not to women. The latter claim that they do the same work and should receive the same pay. At present the women are earning £2 18s. per week, which brings women without children under the liability for payment of income tax.

**Glasgow Women Employees.**—It is stated that on the Glasgow Corporation tramways there are now fully 2,000 women employed. Of these about 400 are engaged as drivers and 1,600 as conductors. Glasgow was the pioneer of women car drivers, and it is estimated that two out of every three of the women thus employed in the United Kingdom are on the Glasgow tramways. More are in training, but men are being called up so rapidly that sufficient women cannot be got to fill the vacancies.

**Claims Against L.C.C.**—During three months ended 30 June, 552 claims in respect of accidents arising in connection with the working of the tramways have been settled at a cost of about £3,896. Of eleven actions against the Council, an adverse verdict was given in two cases; three actions resulted in the Council's favour; five were withdrawn; and in the remaining cases the jury disagreed. A settlement of £275 has been made in regard to claims by the Council in respect of damage to tramway property.

**Effects of a Snowstorm.**—The Glasgow Tramways undertaking is still feeling the effects of the exceptionally heavy snowstorm early in January. A large number of cars were put out of action and up till now it has been impossible to return all the cars to service. The lack of material is the chief drawback, while the want of labour has also affected the situation. Before the storm there were 787 cars on the rails, but the maximum at present is 684. Even with the reduced number the ordinary service has been fully maintained.

**Woman Conductor Fined.**—A woman conductor was fined 20s. at Croydon Borough Bench on a summons for not wearing her badge conspicuously during her employment on a Croydon Corporation tramcar. It appeared from the evidence of a police constable that when asked about her badge defendant produced it from her cash bag. She said she never wore it, and gave an incorrect number. It was also alleged that defendant signalled to the driver to start the car, which was a last car at the Norbury terminus when some people were making their way to it from an London car that had just arrived.

**Corporation Unsuccessfully Sued.**—The Keighley Corporation were sued in the Keighley County Court by a cartage agent for damages in respect of a collision, through a Corporation tram car striking plaintiff's cart as it was being driven across the road. It was urged for the plaintiff that a vehicle limited, as was a tramcar, to a defined track should be driven with more than ordinary care and that this had been wanting. For the defence it was submitted that the car was only travelling at six to eight miles per hour, and the driver did all in his power to avoid the accident. The judge found for the defendants with costs.

**Fuel Oil from Home Sources.**—The question of the production of fuel oil from home sources has been investigated by a committee appointed by the Minister of Munitions. The report states that the best method is the carbonisation of cannel coal in existing vertical retorts at gas works, although no very largely increased quantity of oil can be obtained from this source during the war owing to difficulties of labour, coal transport, etc.—Other sources of supply available in the future include boring for oil in Great Britain, the further development of the Scottish shale oil industry, and the increased carbonisation of raw coal. In regard to this, it is stated, that some 1½ million tons of fuel oil might be obtained from every 20 million tons of coal carbonised.

**London United Tramways Bill.**—This Bill has been passed by a Select Committee of the House of Commons. It authorises the company as from six months after the termination of the war to charge fares not exceeding 1d. per mile for ordinary passengers, and in the case of workmen not exceeding 1d. for the first three miles, and a halfpenny per mile beyond. One of the clauses also prescribes that the power of compulsory purchase by local authorities shall not be exercisable until six months after January 1, 1950, and within six months after the expiration of every subsequent period of seven years.

**Blackpool's Acquisition.**—In the course of a commendation of the purchase by the Blackpool Corporation of the Blackpool-Fleetwood Tramroad Company's undertaking and of the part taken by the Mayor of Blackpool, the *Southport Guardian* says: "The result of Ald. Parkinson's courageous and public-spirited action is that the Blackpool Corporation will, if the amalgamation with St. Anne's and Lytham proceeds, control the whole of the tramroads on the Fylde coast from Lytham to Fleetwood, a distance of something like 20 miles; and this system, being one of the chief pleasure rides in the country, will in the future be a veritable gold-mine to the Blackpool Corporation."

**Renewals of Enemy Patents Prohibited.**—By a notice in the London Gazette, the Controller of the Foreign Trade Department of the Foreign Office has revoked the licence of April 13, 1917, by which persons or companies in the United Kingdom might apply for a grant or renewal of letters patent, or the registration of a trade mark, on behalf of persons whose names were in the "Statutory List," which contained the names of persons with whom trading was forbidden by proclamations under the Trading with the Enemy (Extension of Powers) Act, 1915. It was stated recently by the Home Secretary that there were in force in this country about 10,000 patents belonging to enemy aliens.

**Less Street Lighting.**—With a view to further economy in the consumption of coal the authorities have agreed as an experimental measure that street lighting in inner London may be further reduced to the extent of 50 per cent. of pre-war lighting, provided that the reduction is spread equally over both main and side streets. It is not desirable that main roads should be easily distinguishable from side streets. The measure is subject to revision should it be found that the reduced lighting leads to an increase of crime or danger to pedestrian or vehicular traffic, or seriously handicaps the effective supervision of the streets by an already depleted police force. It is stated that special importance is attached by the military to a uniform lighting effect.

**Women Conductors' Claims.**—In several Yorkshire towns women conductors of the tramway undertakings complain that under the recent award of the Committee on Production they are not paid wages equal with the men, as they contend they ought to be, and they have made representations on the matter through the Amalgamated Association of Tramway and Vehicle Workers, says the *Yorkshire Evening Post*. Meanwhile, it is interesting to know what their demands really mean. In Leeds, women tramway conductors who have been engaged on the service twelve months get 43s. 6d. for a 60 hours' week. They are not satisfied with that, and ask for £2 17s. 6d., the same as the men conductors get. It is not fair, they say, that they should do the same work as the men and receive 14s. a week less. On the company tramway undertakings of Ossett, Dewsbury, Castleford and Wakefield the women are paid 12s. 9d. a week bonus, as against 25s. paid to the men. The Lancashire and Cheshire Council of the Tramway and Vehicle Workers' Association, wishes for the same wages for women as for men where similar duties are discharged.

**Croydon Town Council Refuses Bonuses.**—The Croydon Town Council have been considering applications of the Corporation tramway employees for increased war bonuses, and a report of their Workmen's Wages Committee on the subject. An application from 166 tramway motormen and conductors asking that the award of £1 per week as war bonus granted by the Ministry of Production to all licensed vehicle workers might be granted to them, was not acceded to. With reference to a request from the National Union of Vehicle Workers for an increase in the payments for overtime, it was resolved to reply stating that the Corporation had expressed their willingness to join in the appointment of national and other industrial councils as recommended in the report of the Whitley Committee, and it would appear that these questions would properly fall within the scope of such Councils when appointed. As regarded a recent wages conference of local authorities owning electricity undertakings in greater London to which the Town Council appointed delegates, it appeared that proposals had been put forward for settling the rate of wages to be paid to employees of these undertakings after the war, and for an immediate arbitration on the questions arising thereon. The action taken by the Corporation delegates in refusing at this time to be parties to any such arbitration was approved, the Town Council being of opinion that these questions should be dealt with by the National and Industrial Councils when set up. A proposal by Council Thomson, the chairman of the Tramways Committee, to amend the report of the committee to provide for the concession of the terms of the award of the Ministry of Production as from March 1st (bringing the men's bonus to 20s. in excess of pre-war wages—an average increase of 8s. weekly—and the women an increase from 7s. 6d. to 11s. 6d.) was negatived by a considerable majority. The report refusing the £1 bonus was adopted. It was subsequently reported that the secretary of the Licensed Vehicle Workers' Union had written notifying a further award, increasing the "pound bonus" to 25s. for tramwaymen over 21 years of age

**Leeds Tramways Rolling Stock.**—In his report for the last financial year, Mr. J. B. Hamilton, general manager of the Leeds City tramways says that by considerable overtime work in the shops including Saturday afternoons and Sundays it was possible, with a few exceptions, to provide sufficient cars to meet the requirements. With the exception of three new hopper wagons for the carriage of fireclay, no new rolling stock was built, the whole of the staff being engaged in the repair and maintenance owing to war conditions. During the year 454 motor armatures were repaired in the undertaking's own shops, and 144 entirely rewound, while 60 have been rewound by private firms. This class of work was exceptionally heavy owing to inexperienced drivers and worn track. The cost of repairs to car trucks, gears, pinions and lifeguards has also been unusually heavy owing to the condition of the track. Sixty car axles broken while in service. The light railway for the Leeds Fireclay Company, extending from Woodfield Lane to Cardigan Pit, which was commenced in February, 1917, was completed in November, and the haulage of material was then commenced. A branch line was laid for an additional gantry which has been built at the terminus of the light railway at the Wortley works, to afford increased space for tipping the fireclay.

## FINANCIAL REPORTS AND MEETINGS.

**Sao Paulo Tramways Light Power Co.**—A dividend of 2½ per cent., less tax, is announced.

**Oldham, Ashton and Hyde Tramways Co., Ltd.**—An interim dividend is announced at the rate of 5 per cent. per annum on the ordinary shares.

**Wolverhampton Corporation Tramways.**—The gross profits for the past financial year were £32,038, and it is proposed to allocate £6,580 to the relief of the rates.

**Bristol Tramways and Carriage Company, Ltd.**—An interim dividend for the half-year ended 30th June, at the rate of six per cent. per annum (free of income tax) on the ordinary shares has been declared.

**Chatham and District Light Railway Co.**—An interim dividend at the rate of 8 per cent. per annum (8s.) less tax has been declared on the ordinary shares for the half-year. A year ago the rate was 6 per cent.

**York Corporation Tramways.**—The traffic returns for the month of June as compared with last year are as follows: Receipts, 1917, £3,546 17s. 10½d.; 1918, £4,362 9s. 6½d.; passengers 1917, 832,747; 1918, 965,375; car mileage, 1917, 81,622; 1918, 77,734; receipts per car mile, 1917, 10.43d.; 1918 13·48d.

**Guest, Keen and Nettlefolds.**—The directors of Guest, Keen and Nettlefolds, Ltd., announce that at the annual meeting on the 22nd inst. they will recommend final dividends on the preference shares at the rate of 5 per cent. per annum, and on the ordinary shares at the rate of 10 per cent. per annum for the half-year ended 30 June, together with a bonus of 1s. per share on the ordinary shares all free of tax.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended July 31, amounted to £69,479, an increase of £13,666 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to July 31 (seventeen and a half weeks), the total receipts were £1,098,465, an increase of £134,984 on the corresponding period of 1917.

**Croydon Corporation Tramways.**—Reports on the year's working show that the surplus of £11,220 (mentioned in our last week's issue) compares with a deficiency of £1,633 14s. 5d. for the previous year. The net increase of income was £20,963 and the net increased expenditure was £8,890. On the expediture side the principal increases were as follows:—wages of motormen and conductors, £2,077; power expenses, £2,080; war bonus, £3,312; The expenditure charged to the reserve and renewals fund for the year amounted to £1,450 11s., and the balance of the fund, at March 31st was £43,528 15s. 10d. There had been no capital expenditure during the year.

**Birmingham Corporation Tramways.**—The statement of accounts for the year ended 31 March shows a total revenue of £990,424, as compared with £838,725 for the previous year. Passengers numbered 198,402,908 as compared with 171,445,020. The total expenditure was £755,980 as compared with £632,165. The gross profits were on tramways £234,444 and on motor buses £13,212, as compared with £206,560 and £10,085. The net profits, after deducting interest and sinking fund charges, amounted to £101,700, as compared with £76,291 for the previous year. The net profit was disposed of as follows: transferred to reserve fund, £63,889; transferred to suspense account, £12,801; contributed in relief of rates, £25,000.

**West Ham Corporation Tramways.**—The borough treasurer, reporting on the tramways accounts for the year ended March 31, states that the expenditure amounted to £168,826, an increase of £18,837. The income was £188,851, as compared with £166,142, an increase of £22,708. If the sum paid as allowance to men on active service were excluded, there would have been a gross profit on working of £20,024. Including these allowances, there is, however, a surplus of £3,263 to be carried to net revenue account. Repayment of mortgage loans, contributions to sinking funds, and interest, required £31,635, thus leaving a deficit of £28,177. Excluding the amount of £16,761 allowances to men on active service, the deficit would have been £11,415. The reserve and renewals fund being exhausted, all future expenditure for renewals will become a charge upon the revenue account.

**West Bromwich Corporation Tramways.**—The report of the year ended March 31 states that after charging interest on loans and sinking fund instalments the deficit for the year amounted to £545 7s. 3d. After deducting the credit balance at March 31, 1917, there remained a net deficit on the revenue appropriation account of £281 13s. 9d. The deficit in the working account on the motor omnibuses amounted to £464 4s. 5d., and after charging interest on loans and sinking fund instalments there is a deficiency of £1,767 18s. 1d.

**Western Wagon and Property Company, Ltd.**—An interim dividend for the half-year ended 30th June at the rate of ten per cent. per annum, has been declared.

Receipts amounted to £110,548, working expenses to £78,626, and war allowances to £5,801. The gross balance was £28,369, from which £17,149, interest on capital, contribution to sinking fund, and income tax had to be deducted. The gross balance was equal to 9·89 per cent. on the capital outlay, and the net balance of £11,220 was equal to 3·91 per cent. Traffic receipts had increased by £20,947, or 23·64 per cent., which was attributable to the increased number of passengers carried, namely, 3,696,833, and to the fact that the previous year contained nine months of revised fare charges. The figure of £100,000 had been reached for the first time in the history of the undertaking, and the receipts were £16,000 higher than the previous best (1915-16).

## PERSONAL.

**Mr. C. J. Spencer,** general manager of Bradford Corporation tramways, has received permission of the Corporation to act on behalf of the Middlesbrough Corporation in an arbitration for the acquisition of tramways in its area.

**Edinburgh Tramway Management.**—The recommendation of the Tramways Committee that Mr. P. Stuart Pilcher, general manager of the Aberdeen Corporation tramways, be appointed general manager of Edinburgh Corporation tramways, was approved by the Town Council on Tuesday. Mr. Pilcher has been for twelve years manager at Aberdeen, and previous to that appointment he was assistant electrical engineer to Birkenhead Corporation from 1901 to 1904, and traffic manager of the Burton-on-Trent Corporation tramways from 1904 to 1906. He was trained as an electrical engineer by the Montreal Street Railway Company.

## CONTRACTS AND ORDERS.

**Ed. Bennis and Company, Ltd.,** have an order from Lancaster Corporation for two sets of machine stokers.

**Bexley Council** has instructed its electrical engineer to report as to the cost of a motor vehicle.

**Bradford Tramways Committee** has ordered gear wheel castings from Edgar Allen and Company, Ltd., and Cammell Laird and Company, Ltd.

**The London County Council** have purchased 2,800 tons of coal and 3,400 tons of coke for use at Greenwich generating station, at a cost of about £58,000, during the quarter ended June 30, 1918.

**Scarborough Tramway Claims for Losses.**—The Defence of the Realm Losses Commission on July 30, considered the claim by the Scarborough Tramways Company against the War Office. It was alleged that the military authorities by the erection of certain barriers in 1915 cut off a portion of the main route for passengers, and that a loss of £350 in traffic receipts was caused. Mr. Gripper, chairman of the company, said that the undertaking was under statutory obligations, and the cars had necessarily to be run at a loss. The decision of the Committee was deferred.

## POSITIONS VACANT.

### EBBW VALE URBAN DISTRICT COUNCIL.

**Resident Electrical Engineer.**

The District Council invite applications for the appointment of a Resident Electrical Engineer. Salary £250, rising by annual increments of £10 to £300 per annum.

Candidates for the position should have had experience of the erection and maintenance of a large overhead distribution system, be conversant with the management of a Municipal Electricity Undertaking with over 1,000 consumers, and shall also have had experience in the management of an Installation Department. The District Council have no generating station, but purchase current in bulk.

The successful applicant will be required to devote his whole time to his duties, and not engage in other work.

Applications (stating age, qualification and experience), accompanied by copies of three recent testimonials, should be enclosed in a sealed envelope, endorsed on the outside "Engineer," and should be delivered at my office not later than August 12, 1918.

THOS. HUGHES,
Clerk.

Dated the 19th day of July, 1918.

### METROPOLITAN BOROUGH OF HAMMERSMITH.

**Electricity Department.**

The Council of the Metropolitan Borough of Hammersmith invite applications from properly qualified men for the post of:—

**Engineer-in-Charge.**

Salary £175 per annum, rising by annual increments of £12 10s. to £200 per annum, plus war bonus of 20s. weekly and 12½ per cent. on earnings.

The appointment will be subject to one week's notice on either side.

Applications, stating experience and accompanied by copies of three recent testimonials, must be delivered to the BOROUGH ELECTRICAL ENGINEER, Electricity Works, 85, Fulham Palace Road, Hammersmith, W.6, not later than Monday, August 19th, 1918.

Candidates canvassing members of the Borough Council will be disqualified.

Dated this 6th day of August, 1918.

LESLIE GORDON,
Town Clerk.

Town Hall,
Hammersmith.

### MEXBOROUGH URBAN DISTRICT COUNCIL.

**Electricity Department.**

**Charge Engineer.**

Required immediately, Charge Engineer with experience of D.C. 3-wire station combined with refuse destructor. Wages £2 12s. per week of 56 hours, plus 12½ per cent.; all overtime paid.

Apply stating age, experience, together with testimonials, to the undersigned.

J. B. FELTHAM, A.M.I.E.E.
Engineer and Manager.

Electricity Works,
Mexborough.

### RHONDDA URBAN DISTRICT COUNCIL.

**Electricity Department.**

Junior Switchboard attendant wanted, 8-hour shifts; knowledge of A.C., 3-phase supply a recommendation. Good opening for student. Wages 29s. 6d. per week, plus 9s. war bonus and 12½ per cent. Only applications from those ineligible for the Army will be considered. State age, experience, together with copies of testimonials to be sent to the undersigned.

J. M. BOWMAN,
Engineer and Manager.

Electricity Works,
Porth, Rhondda.

### SHIFT ENGINEER.

Shift Engineer wanted for power station near London; must have had experience with turbines and E.H.T. 3-phase plant. Wages £3 7s., plus 12 per cent. per week.

Apply stating age and experience, with copies of recent testimonials, to the CHIEF ENGINEER, Electricity Works, Luton.

### ENGINEERS-IN-CHARGE.

Junior Assistants wanted, with mechanical and electrical training and experience of D.C. and E.H.T. operation. Wage 32s. 6d. plus 12½ per cent.

Write, stating age and experience. THE ENGINEER AND MANAGER, West Ham Corporation Electric Supply, 84, Romford Road, Stratford, E.15.

### JUNIOR SHIFT ENGINEER.

The Crewe Corporation invite applications for the position of Junior Shift Engineer. Preference given to applicants with experience in D.C. 3-wire Central Station work. Applications giving full particulars and stating wages required, together with copies of not more than two testimonials, to be sent to—THE BOROUGH ELECTRICAL ENGINEER, Electricity Works, Crewe.

## FOR SALE.

### OLDHAM CORPORATION TRAMWAYS.

On Sale. 1 Hand-welded Boiler with about 1,300 ft. 3 ins. and 4 ins. Galvanised Piping, Elbows and Tees. Also, 14 lengths 4$\frac{3}{16}$ ins. diameter and 21 lengths 3$\frac{3}{16}$ ins. diameter best Iron, all 6 ft. 5½ ins. long.

These can be seen upon application at Wallshaw Depot, Oldham.

Further enquiries may be obtained from W. Chamberlain, General Manager and Engineer, Wallshaw Depot, Oldham.

### COUNTY BOROUGH OF SALFORD.

The Electricity Department have for sale two 1,000-kilowatt Direct-Current Turbo-Generators, Willans disc and drum type, coupled to Siemens Machines, voltage 440-490. Rated output 1,000 kilowatts with 160 pounds steam pressure. The sets are in regular commission, practically new, and can be seen in operation by appointment. Full particulars from the Borough Electrical Engineer, Electricity Works, Frederick Road, Salford. Tenders are invited by Saturday, August 17th, 1918.

L. C. EVANS, Town Clerk.

**Wanted.**—Copies of the TRAMWAY AND RAILWAY WORLD of January 1 and 13, 1916; March 9, 1916; April 13, 1916; May 11, 1916; June 8, 1916; October 9, 1916; August 16, 1917; and October 18, 1917.—Reply to Box 12, The TRAMWAY AND RAILWAY WORLD, Amberley House, Norfolk Street, London, W.C.2.

## INCREASED TRAMWAY FARES AUTHORISED.

The Statutory Undertakings (Temporary Increase of Charges) Bill, as amended by the House of Commons, was passed by the House of Lords on Monday and received the Royal Assent on Thursday. Tramway undertakings have now the possibility of obtaining some relief from the difficulties in which they have been placed by increased wages and higher costs of material. While the Bill by no means meets the expectations entertained when it was expected that a special Bill dealing with the position of tramways would be introduced, it does provide means that should enable all those tramways whose operations have been adversely affected by war time conditions to increase their statutory maxima charges. In the case of corporations these charges may be increased to the extent of 50 per cent., if necessary, to guarantee the undertakings against loss. In the case of companies, fares may be so increased that a dividend on the ordinary stock or shares can be paid equivalent to three-quarters of the pre-war rate of dividend. As originally introduced, the Bill limited the rate in the latter case to one-half, but by an amendment in the House of Commons it was increased to three-quarters of the pre-war rate of dividend. It is provided that applications for variation of the maxima fares must be made to the Board of Trade, accompanied by such information as the department may require with respect to the financial position of the undertaking. Before an order is made the undertakers will also be required to give public notice of the application for an order under the Act, and as to the manner and time within which representations may be made. Throughout the discussions in both Houses very little reference was made to tramway undertakings. The case of the gas companies received almost exclusive attention, and the opposition to the Bill was confined almost entirely to those who objected to the increase in the price of gas. The condition of these undertakings, of course, is totally dissimilar to those of the tramways, and if the tramway question had been dealt with in a separate Bill, there is little doubt that it would have been more serviceable to tramway undertakings. Much of the advantage to be derived from the measure will depend upon the way in which the Board of Trade deal with the applications, and it is to be hoped that the work will be placed in the hands of the Tramways (Board of Trade) Committee. The members of this Committee are all experienced tramway managers, and fully acquainted with the difficulties under which all tramways are now working. The relief has come none too soon, for the condition of some of the undertakings, owing mainly to recent increases in wages granted by the Committee on Production, has become critical. When the statutory maxima fares were fixed such an economic condition as now exists was not thought of, and it would be unreasonable to expect tramway services to be carried on without any alteration in their charges. The new Act enables the increased fares to remain in force until two years after the termination of the war, but when that time arrives, if circumstances require it, it will be a comparatively simple matter to continue the Act in force for a further period.

## A QUESTION OF EXTRAORDINARY TRAFFIC.

COUNCIL ALLOWED £280 AGAINST QUARRY OWNERS.

A question of extraordinary traffic in roads was the subject of an action in the Chancery Division of the High Court recently. The plaintiffs were Weston-super-Mare Urban District Council, and the defendants Messrs. Henry Butt and Co., Weston-Super-Mare, quarry owners. The action, which extended over thirteen days—at the end of June and the beginning of July—was heard by Mr. Justice Eve, who delivered a reserved judgment on July 31st. Counsel in the case were : for the plaintiffs, Mr. Macmorran, K.C., and Mr. J. Scholefield, and for the defendants, Mr. Maugham, K.C., and Mr. W. A. Jowitt. Plaintiffs claimed from the defendants £1,750, the amount of expenses incurred in repairing certain roads which they alleged were damaged by the extraordinary traffic of the defendants. Alternatively the plaintiffs claimed for damages for nuisance. The defendants denied liability and said that the traffic which they had placed on the roads was not extraordinary.

His Lordship, in the course of his judgment, which was reported at considerable length in *The Times* of August 1, said that the defendants did not dispute that they were the persons by whose order the traffic was conducted, but they denied that it was extraordinary. Among other defences they raised one which involved the question whether ordinary traffic over a highway became extraordinary when the method of transport was so altered as materially to increase the cost of repairing the highway, or, in other words, was the increased cost due to the alteration in the mode of transport recoverable under section 2 of the Highways and Locomotives Amendment Act, 1878, from the persons so using the highways, or did the obligation lie upon the highway authority to render the highway capable of sustaining the new method of transport without excessive wear and tear ? The question was not capable of an answer applicable to all circumstances.

Coming to the facts, his lordship said that down to August, 1913, the stone and lime brought from the defendants' quarry and the coal carried thither were transported in horse-drawn carts and wagons of a maximum weight of three tons or thereabouts. The total weight so drawn was large. Along the Bristol Road during the year ended March 31, 1913, it amounted to 13,524 tons, of which 12,108 tons passed also over Arundel Road. In August, 1913, the defendants began to use a steam wagon and trailer, and in the year ended March 31, 1914, when there were drawn over the Bristol Road 25,645 tons of which 22,347 tons also passed along Arundel Road, 6,838 tons were transported over both roads by steam traction In the year ended March 31, 1915, the total increased to 27,000 tons, of which 13,119 tons were carried by steam over both roads, and in the year ended March 31, 1916, when the total fell to 22,905 tons, there passed along the Bristol Road 15,046 steam transported tons, of which 14,736 tons passed also over the Arundel Road. In January, 1916, a second steam wagon had been added.

TWO QUESTIONS.

On these facts the questions arose :—(1) Did the defendants impose extraordinary traffic on these roads where they adopted steam traction ? and (2) if so, had that traffic ceased to be extraordinary and so far become ordinary traffic in the early part of 1916, as to impose on the plaintiffs the obligation of providing roads adequate to carry it ? Although the answer to each question involved a finding of fact, there were authorities binding on him which indicated clearly what these findings ought to be. In *Hill v. Thomas* ([1893] 2 Q.B., 333) the Court of Appeal said that extraordinary traffic denoted a carriage of articles over a road at either one or more times which was so exceptional in the quality or quantity of the articles carried or in the mode or time of user of the road as substantially to alter or increase the burden imposed by ordinary

Digitized by Google

traffic on the road, and to cause damage and expense thereby beyond what was common.

Proceeding, his Lordship said that an elaborate census of the traffic passing along the Bristol Road during the 25 weeks between May 1 and October 23, 1916, showed that the carriage of concentrated weight over the road was still exceptional and virtually confined to the defendants, and in these circumstances it could not have ceased to be extraordinary traffic and become ordinary traffic between 1913 and 1916. There existed from August, 1913, conditions capable of giving rise to a claim under the statute of 1878. On February 19, 1917, the plaintiffs' surveyor certified that extraordinary expenses within section 23 had been incurred by reason of damage to each of the roads, and on February 21 the writ was issued.

A LIMITED LIABILITY.

The object of section 23, said his Lordship, was to ensure that a person using a highway for exceptional purposes should pay for any damage caused thereby, but by section 12 of the Locomotives Act, 1898, the liability was qualified by an important limitation in that the action to enforce the statutory remedy must—with certain exceptions—be begun within 12 months of the time when the damage was done. The true effect of this limitation was that the authority could only recover for so much of the damage as was done within the 12 months preceding the issue of the writ, and if the injury had been going on for a longer period it became necessary to ascertain how much of the expense was properly attributable to those 12 months. He thought that as a result of the authorities it might be accurately said that *prima facie* the measure of damages was the difference between the sum expended in repairing the particular highway during the year, and the average sum expended on it in previous years. But obviously that could only be the *prima facie* method for ascertaining the damages, as there might have co-existed with the extraordinary traffic for which the action was brought the traffic and causes contributing to the necessity for increased expenditure, and the Legislature could not be presumed to have intended to impose on the person responsible for the extraordinary traffic any liability for increased expenses due to other causes.

THE CONCLUSION.

Considering plaintiffs' claim for each of the roads, His Lordship gave judgment for the plaintiffs for sums amounting in the aggregate to £280. His Lordship added that no case of nuisance had been made out. Not a single accident to any person had ever been reported, nor had any witness said that he was prevented from using either of the roads by its dangerous condition except one whose evidence came to no more than that his chauffeur did not drive down Arundel Road because it was not safe. The plaintiffs had wholly failed to make out their allegations of excessive speed. Therefore the action failed on that issue and he proposed in giving judgment for the plaintiffs for £280 to order the defendants to pay the costs of the action excepting so far as they had been increased by the issue raised in paragraph 2 of the prayer of the claim, and to order the plaintiffs to pay the defendants' costs, so far as they had been increased by that issue, with the usual directions as to set off.

## REDUCTION OF SERVICES.

The York City Council have been recommended by the Electricity and Tramway Committee to adopt the recommendations put forward by the Tramways Manager (Mr. J. W. Hame), who has reported: "I am of opinion that very little economy can be effected in practice by cutting out a few stopping places, nor is it practicable under existing conditions to ascertain accurately the current consumption by each driver so as to be able to grant a bonus to motormen for economy in current consumption. The only practicable way of effecting a substantial saving is by reducing the car mileage. To make a reduction on the whole of the mileage involves the cutting down of the service by two hours per day, and at this time of the year such reduction would cause a most serious loss." The manager's recommendations include fewer and earlier last cars, no Sunday cars till two o'clock, and further curtailments in the evening in the winter.

The Poole Town Council have protested strongly against the discontinuance of the Sunday cars by the Bournemouth Town Council, whose tramway service operates in Poole as well as in Bournemouth, and urge that economies could be made in the week-day service which would enable a reduced Sunday service to be run. The Bournemouth Town Council have endorsed the opinion of their Tramways Committee that it is impossible to run even an amended service of cars on Sunday and anything approaching an adequate service on week days and at the same time comply with the requirements of the Board with regard to economies, and that the economies already made in the week-day service have almost resulted in the service being inadequate.

As a result of the coal rationing scheme there is, says the *Birmingham Gazette and Express*, a prospect that the tramway services of Birmingham may be further curtailed. Some weeks ago the Birmingham Corporation gave a hint that it might be necessary to restrict the services, and although nothing definite has been decided, the matter has cropped up again as the result of the insistence of the London authorities, who have suggested that in order to save fuel, municipalities should reduce their services by 15 per cent. To Birmimgham this is a serious matter. There are large numbers of workers who, under present circumstances, find that the task of catching a car to or from work is no easy matter, and if one in seven cars were taken off—as a 15 per cent. reduction would mean—their difficulties would be still further increased.

The first step of the Mansfield Tramways Company towards the curtailment of the consumption of coal for their services of cars which connect Mansfield with Sutton, Huthwaite, Pleasley, Mansfield Woodhouse, and Forest Town, is the abolition of 50 stopping places. Nothing has yet been decided upon as to the running of cars on Sundays.

The Dundee Tramways Committee has been considering the reduction of the car service to meet the Board of Trade requirements of economy in coal and electricity. Among the suggestions put forward were the suspension, or at least the curtailment of the Sunday services and the suspension of services in outlying sections of the routes.

Salford Tramways Committee have decided to reduce the service of Sunday cars from 46 to 29, beginning with to-morrow. On certain routes, after Monday, the service will be discontinued at 11 o'clock.

At Wolverhampton, stopping places have been reduced on all routes.

## PRE-WAR FARES AND WAR TIME COSTS.

The San Diego (California) Electric Railway Company publish a monthly leaflet, the "San Diego Electric Railway News," which is intended not only to promote traffic, but to give the public an insight into the difficulties of public service undertakings. In a recent issue, under the title "There is No Such Animal," the Editor discusses the impossibility of maintaining a tramway service at pre-war fares. The *Portland (Oregon) Telegram* having remarked that any man or public body able to devise a plan for making a peace time car fare meet a war time expense of operating a trolley line was a financial genius, the editor of the "News" says that it might be added that owners of street car properties all over the United States would be gratified to a greater extent than their patrons if such a thing were possible, but it is not and never can be. The financial genius would accomplish it at the same time that the water from Niagara Falls changes its course and flows straight up instead of down. If the genius were born who could make a peace time car fare meet a war time expense, he would have a life-time contract for accomplishing the same thing in every other line of business. There really should, adds the writer, be no complaint in these times about prices if they are known not to be the result of profiteering. Even the War Finance Corporation at Washington, organised for the assistance of public utility companies, could not see its way clear to advance funds to street railway companies for improvements or necessary extensions under the present non-paying conditions. The directors of the War Finance Corporation have stated that they do not feel that they have any authority under the law to make loans except upon adequate security, and they are convinced that the inability of a utility company to earn a sum at least sufficient to pay fixed charges, taxes, maintenance and repairs, is conclusive evidence of the inadequacy of its own obligations as security. State Railroad Commissions and local authorities in all parts of the United States are following out the suggestions of the War Finance Corporation in coming to the aid of such public utility concerns as are suffering financial distress.

## COAL RATIONING FOR INDUSTRIES.

The Controller of Coal Mines is being assisted in the coal economy campaign, which he has instituted to reduce fuel consumption in every way possible, by a technical staff attached to the head office; and arrangements have now been made for a large number of engineers in the country to attach themselves to the Coal Control Department for this special purpose. The arrangement enables the country to be mapped out in districts, so that all industrial consumers will, within a reasonable time, be in touch with the organisation.

The scheme comprises, says *The Times*, two main sections—namely, (1) electrical undertakings, and (2) industrial undertakings. The work involved includes the careful scrutiny of the quantity and quality of coal consumed by the various undertakings and the efficiency obtained, and the inspection of factories and works by experts to ascertain the best means by which fuel consumption may be reduced. A considerable amount of work has already been done, but it is intended to accelerate the rate of progress as much as circumstances will admit. Some 400 skilled engineers will shortly be at work in various parts of the British Isles. They are giving their services to the Government without delay.

Any public body, or company, or person wishing to effect economies at once, and desiring the Controller's assistance in this direction, is invited to communicate with Coal Control Headquarters, Room 309, Holborn Viaduct Hotel, London, E.C.1, when arrangements will be made to send a technical expert to look into the condition under which coal is being consumed, and to co-operate with the consumer in effecting economy. Apart from special applications of this kind, the Controller's representatives will visit firms in turn in accordance with a general plan of operations.

So imperative is the need to reduce coal consumption to a minimum that a rationing scheme for all industrial undertakings will be introduced shortly.

## AUSTRALIAN STANDARD TRAMWAY RAIL.

A conference of Australian electric tramway engineers convened in Sydney, N.S.W., to consider the adoption of a standard, grooved girder tramway rail, passed the following resolutions :—

1. That a standard girder rail be adopted for the tramways of the various states of the Commonwealth.

2. The weight of the girder rail for the tangent track shall not be less than 90 lb. per lineal yard ; the exact weight being subordinated to the design.

3. That the height of the girder rail be not less than 6in.

4. That the width of the flange shall not exceed the height of rail by more than ¼in.

5. That the conference is agreed that the form of groove and guard of the rail should take the form of the present standard of the American Electric Railway Association.

6. That the tread of the proposed section of rail shall approximately conform to that shown in blue print No. 3305 of the Adelaide Municipal Tramways Trust.

7. That Mr. Cowdery, engineer for permanent way, New South Wales Government Tramways, be asked to get from the manufacturers the chemical and physical tests of steel that they can guarantee for tramway purposes, and that it be left to him to design a rail in conformity with the resolutions of the conference.

The tread referred to in Resolution 6 is struck to a radius of 12in., with a 5-16in. radius on the running edge which the conference resolved would tend to give a longer life both of wheels and rails.

Owing to the difficulty of importing rails from overseas, the manufacture of rails in Australia has become necessary and the Broken Hill Proprietary Company, Ltd., which has steel works and rolling mills at Newcastle, N.S.W., proposes to install a plant to roll grooved girder rails of the standard section.

## STATUTORY CHARGES BILL.

PASSED IN THE HOUSE OF LORDS.

The Statutory Undertakings (Temporary Increase of Charges) Bill was considered in Committee of the House of Lords on Friday of last week. An amendment, moved by the Marquess of Crewe, to leave out "three quarters" and insert "one half" in a sub-section of Clause 1, relating to the dividend allowable, was negatived by 32 votes to 3. A further amendment to Clause 1 was moved by the Marquess of Crewe, with a view to providing that the notice of the application for an Order under the Act required to be given "to the council of each county, borough, or urban or rural district within which any part of the undertaking, or limits of supply of the undertaking, is situate" should be extended by means of the insertion after the word "situate" of the words "and in the case of a tramway undertaking, also to the council of any area in which thorough running operations are in operation." Lord Somerleyton thought the amendment unnecessary as public notice would be given, and any local authority might then make representations. He thought also that such a provision as that suggested might lead to the withdrawal of through running arrangements. The amendment was by leave withdrawn. Clause 1 was agreed to, as were the other clauses, and the Bill was reported without amendment. The Bill was read a third time, and passed on Monday, and received the Royal assent on Thursday.

## INCREASE OF FARES.

At the Wolverhampton Town Council, Alderman Sir Charles Mander, Bart., Chairman of the Tramways Committee, said that many tramways had raised their fares during the last few months, and at the present rate of increased costs it would undoubtedly be necessary to raise the fares in Wolverhampton. The Committee, however, had decided to run at existing rates so long as it was consistent with the sound financial position of the undertaking.

At Halifax, the revised fares which have just come into operation have been established by reducing the length of the stages, on the basis of a charge of one penny a mile. The Corporation have not power to raise the charges

The Hull City Council have withdrawn halfpenny stages on their tramways. An amendment to introduce three one-halfpenny stages and withdraw the penny through fare was negatived.

At Preston an increase of a halfpenny on all stages has carried with it the removal of the halfpenny fares.

## MISCELLANEOUS NEWS AND NOTES.

**London Tramways Goods Traffic.**—The London County Council is converting two tramway cars for the carriage of goods for experimental purposes at an estimated cost of £100.

**Railless Traction at Brighton.**—The Town Council of Brighton has applied for an extension of a year from August 7 for the completion of the overhead equipment of the line from Ovingdean to Rottingdean under the Brighton, Hove and District Railless Traction Act, 1911.

**Killed by a Falling Trolley.**—At an inquest at Liverpool on the body of a man whose skull was fractured by a blow from a trolley, which fell from a tramcar, the jury found that death had been caused by a blow from the trolley, adding that there was not sufficient evidence to show what caused the trolley to fall. It was stated that the car had been examined before leaving the depot, and was then passed as in perfect running order. The mishap was attributed to the lock-stud at the base of the trolley becoming detached.

**The Future of Railways.**—Sir A. Stanley has stated that the Board of Trade are giving careful attention to the future administration of railways. They have the advice of a number of experts on all aspects of the matter, and it is not proposed to appoint a formal committee to consider the subject.

**Bristol Corporation's Application.**—The Bristol Corporation is applying to the Board of Trade for an Order extending for a further period of one year from October 31, 1918, the time during which the Corporation shall be entitled to give notice of their intention to exercise their option to purchase the tramway undertaking of the Bristol Tramways and Carriage Co., Ltd.

**Injunction to Protect Tramways.**—In an action in the Court of Chancery recently, Mr. Justice Sarjant granted an injunction against a colliery company to restrain defendants from tipping debris on the side of a mountain so as to endanger or threaten, obstruct or injure tramways, vested in the plaintiffs, the Rhondda Urban Council, and declared the defendants liable as to any damage

**Objection to Conscientious Objectors.**—The Hull Corporation Tramways Committee, having been asked by the local branch of the National Federation of Discharged and Demobilised Soldiers and Sailors to place the claims of ex-service men before those of conscientious objectors, have decided not to entertain applications of two conscientious objectors to be employed as drivers.

**National Regulation of U.S. Tramways.**—The United States War Labour Board has asked President Wilson to assume jurisdiction over street railways to the extent of regulating fares. It is stated that the powers of the Executive are sufficiently broad to enable the President to do this. The Labour Board has recommended that wages be increased on all street railways, and if the President approves, the recommendation will become effective.

**National Service Department and Tramway Cases.**—In connection with an application to the Hull Appeal Tribunal in the case of a motorman (28), in grade 2, a telegram was produced by a representative of the tramwaymen's union from the National Service Department, saying that all cases of tramway men should be adjourned until an agreement had been arrived at between the department and the union. The Military Representative said that he had received instructions to agree to the adjournment of all tramway cases for the present.

**Sheffield Driver Not Negligent.**—In the Sheffield County Court, the Sheffield Forge and Rolling Mills Company claimed £100 from the Sheffield Corporation, damages alleged to have been sustained owing to the negligent driving of one of their tramway car drivers. There was a counterclaim for £4 3s. 0d., damage done to the car. After hearing evidence the Judge said he did not think any negligence had been proved against the Corporation, and therefore the plaintiffs could not succeed. He gave judgment for the defendants on the claim and on the counterclaim.

**Canada's Fuel Problem.**—At a meeting of the Canadian Society of Civil Engineers held recently at Toronto a discussion took place upon the Canadian fuel problem. After the possibility of coal supplies from the United States being cut off had been dealt with, it was declared that the electrification of railways, especially terminals, would save an enormous consumption of coal, and relieve the transportation system. In 1917 over 9,000,000 tons of coal were consumed by the railways, and several speakers asserted that it would be possible to save at least two-thirds of this amount by the use of electric locomotives.

**Cost of Railway Sleepers.**—In the House of Common on Monday, Colonel Stirling asked the President of the Board of Trade whether he could give the average cost of 9 ft. by 10 in. by 5 in. railway sleepers produced by Scottish home timber merchants and by overseas contingents respectively ? Sir A. Stanley replied that he had no information as to the cost of production of 9 ft. by 10 in. by 5 in. sleepers by Scottish merchants but the merchants sold the sleepers at the maximum prices allowed by the Home-grown Timber Prices Order, 1918. These sleepers could be produced at costs within those rates by the operations of the Timber Supplies Department and overseas contingents.

**Edinburgh-Queensferry Tramways.**—A deputation from Edinburgh Corporation, consisting of the Lord Provost, Sir J. Lorne MacLeod, Councillor Harrison, convener of the Tramways Committee, Councillors Deas and Sleigh, and the town clerk, Mr. Grierson, have recently had an interview with the Admiralty. The deputation asked the Admiralty for a statement of their position with regard to the proposed Edinburgh-Queensferry tramway, and the Admiralty has undertaken to communicate with the Corporation at an early date. Considerable importance is attached by the promotors of the scheme to the traffic which will be contingent on the Admiralty developments on the Forth, and the statement of the Admiralty is awaited with much interest.

**Electricity Supply.**—Colonel W. Thorne asked the President of the Board of Trade in the House of Commons on Monday if any statement could be made as to the intentions of the Government with regard to the Report on Electricity Supplies ; if he was aware that the uncertainty at the present time of the Government's intentions was embarrassing to public bodies owning electricity undertakings, and that it was difficult for the local bodies to determine the proper course of action in regard to the extension of their plant and negotiations with their large consumers ; and if he intends taking action in the matter ? Sir A. Stanley in reply said the report was receiving careful consideration, but he regretted that he was not yet in a position to make any statement as to the intentions of the Government in regard to it. He did not think he would be able to make any statement before the Recess.

Digitized by Google

**Rhondda-Pontypridd Tramway Enquiry.**—The Board of Trade is to hold a public inquiry in regard to the question of linking up the Pontypridd and Rhondda tramway services. It appears that a committee appointed by the Board of Trade recently recommended the linking up of the services at Trehafod, the Rhondda Tramway company's cars to run to Mill Street, Pontypridd. Through some oversight the Pontypridd Urban Council was not invited to send representatives to the meeting, and the members of the Council expressed strong dissatisfaction with the form of inquiry held, and also objected to the recommendation, being of opinion that the termini of the systems should be at Porth.

**Concession to Gas Propelled 'Buses.**—In the interests of economy in petrol, the President of the Local Government Board has expressed the hope that highway authorities will give their consent, when approached, to the deviation of gas-propelled motor omnibuses from a route established prior to March 1,1916, if the deviation is for the purpose of obtaining supplies of gas or avoiding obstructions. This expression of the view of the Local Government Board follows a recommendation of the Gas Traction Committee that a deviation for such purposes should not be regarded as a breach of section 20 of the Local Government (Emergency Provisions) Act, 1916.

**Tramway Prospects at Leeds.**—The visit of the Leeds Tramways Committee to Liverpool, says the *Yorkshire Observer*, may be taken as a step in the direction of making the city the desirable place to live in that it should be. The Mersey port has constructed several fine radial roads in its suburbs, and it is the intention of Leeds to follow suit. Some of these thoroughfares will probably be broader than anything of the kind known, and on the boulevard principle. Part of the scheme will involve the discovery of a better solution for the traffic problem than has hitherto been tried. Leeds may in the future have its street light railway with quarter mile stages, and a service of cars that will take the worker to his cottage in the distant suburbs at a speed of well over twenty miles an hour.

**Chicago's Traction Plans.**—"Electric Traction" of Chicago states that the officials of the Chicago street and overhead railways and the City Council's Sub-Committee on Transportation have agreed on the principal features of the proposed subway and traction unification ordinance. The overhead railway and tramway extensions to be built within six years under the concession are estimated to cost £20,000,000. Additional subways and extensions to be constructed subsequently will entail a total cost of £60,000,000. Surface and overhead lines are to be combined in a consolidated corporation and the new company is to be given a concession for thirty years, the company being guaranteed 6 per cent. on the initial capital, the Board of Regulation and Control having full control over the capital account.

**Wages in Montreal.**—After prolonged negotiations, says the *Electrical News* (Toronto), the Montreal Tramways Company has come to an agreement with its employees as to advances in wages. The representatives of the men asked for a larger increase than is to be given, and as the company put forward a lower schedule, a compromise was agreed upon. The advance will involve an average increase of 20 per cent. of the wages bill of the company, or a total of £120,000. Motormen and conductors obtain increases of from 3d. to 3½d. an hour, the new rates being from 1s. 3d. an hour to 1s. 6½d. an hour. All other branches are included in the arrangement, including power house, linemen, rolling stock, car barn, construction, and bridges and building departments. The increases here are from 1¾d. to 6½d. an hour, switchboard operators and assistant engineers being the highest paid employees in the electrical department, with wages of 1s. 8d. and 1s. 9½d. per hour respectively. The linemen are paid 1s. 4½d. per hour. Ten hours will constitute a day's work, with time and a half to be paid for all time over ten hours. Of the total number of men employed, 90 per cent. are granted rate increases.

**Tramways at Buenos Ayres.**—An interesting reference to the tramway system of Buenos Ayres appears in "Argentina Commercially Considered," a veritable storehouse of information in Argentine matters, recently published by the Syren and Shipping, Ltd., 91 and 93, Leadenhall Street, E.C.3. The tramways, it is stated, now cover more than 400 miles in the city, and practically every street has its line. This is a result due to the chess-board plan on which the city is laid out, and to the narrowness of the streets which has too often prevented the up and down lines following the same route, and necessitating the distribution of the lines all over the city. There are now very few miles of horse tramways left, electrification having been commenced in 1897, and being now practically complete. It cannot be said, however, that the increased facilities afforded by the new power system have diminished the congestion. On the contrary, they have increased it, and this is only natural, for by providing such excellent services the tramway companies have also created an increased demand. The use of the tramlines, as is common in South American cities for the movement of freight, has also added to the difficulty. The steady growth of the city means a constant addition to the produce arriving for local consumption, whilst the excellent railway network brings goods and passengers from the surrounding provinces in ever-growing volume and numbers. In an effort to cope with the congestion underground subways for tramways have been and are being constructed, but it is doubtful if these do more than relieve for a time the present congestion. As in 1913 the daily number of passengers carried exceeded 1,000,000, the difficulty is no slight one. A step which can be taken when a widening scheme is complete will be the substitution of larger cars, as most of those now used have seats for only 32 passengers.

**Select Committee on Transport.**—In the House of Commons on Wednesday, a Select Committee was appointed to consider what steps, if any, it is desirable to take to develop and improve the internal facilities for transport within the United Kingdom; to secure effective supervision and co-ordination; and to secure that developments and improvements shall be adequate and suitable to the national requirements. The following are the members:—Mr. Acland Allen, Sir Arthur Shirley Benn, Mr. Davison Dalziel, Mr. Field, Mr. Gilbert, Col. Gretton, Col. Sir Frederick Hall, Mr. Haslam, Mr. Hudson, Col. Jackson, Mr. Keating, Mr. Robert Mason, Mr. Somervell, Col. Wedgwood and Mr. Wilson Fox. The committee has power to send for persons, papers and records, to appoint persons from outside its own body to serve on sub-committees; to report its observations from time to time.

**Tramway Extension and Housing.**—The Edinburgh Town Council received a deputation from the Edinburgh Trades Council in support of the Queensferry tramway scheme. Several members of the deputation referred to the connection between tramway extension and increased housing accommodation. Mr. A. Eunson, the president of the Trades Council, said one of the reasons why the scheme appealed to the deputation was the result which improved tramway facilities would have in regard to housing. If they were to have twelve houses to the acre, it implied suburban development, which required travelling facilities. They must have co-ordination between tramway policy and housing policy. His view was that if they purchased land where land was cheaper and gave tramway facilities, they got a considerable advantage. Mrs. Johnston, another speaker, said she looked on this scheme of tramway extension to induce builders to build houses on the garden city plan, where there should be wide streets and open spaces. They should have, she thought, a shorter working day, which would induce people to go to live further from their work. She hoped the new scheme would spread through the towns and villages round about, and in this way help to stem the influx of people into the city. Mr. Harrison, on behalf of the Tramway Committee, thanked the deputation for their support of the scheme.

**Air Machines after the War.**—Mr. Handley Page, speaking at a meeting at the Automobile Club, as reported in *The Times*, prophesied that as soon as peace was declared it would be possible to open an air service between London and Marseilles, with a single stop at Paris for an overhaul and the taking in of petrol. Before the war the actual transit of mails from London to Constantinople took 72 hours. By air the journey could be made in 20 hours. Rome could be reached in 12½ hours instead of 42 hours, Marseilles in eight hours instead of 23 hours. He was convinced that an 800-mile service could be run at a profit, both for mails and passengers, at a rate but little in excess of that now in force. He based his calculations on the use of a medium-sized machine making non-stop flights of 400 miles. Each would be provided with 300-horse power engines, and would carry 4,400 lb. of revenue-earning load in addition to the pilot and mechanic and the petrol necessary for a five-hour flight. The cost per ton mile would work out at 20½d., and the cost per passenger mile to 1·36d. Merchandise would have to be carried with passengers if the passenger rate were to be kept down. A 600 horse-power machine could carry comfortably six passengers, totalling, say, 900 lb., and 3,500 lb. of postal matter and merchandise, and it would be commercially possible to carry those six passengers at 1s. per lb. per 800 miles. This would amount to 2¼d per mile. On the basis of 1s. per lb. per 800 miles, the charge for carrying letters that distance would be less than 1d. per ounce, and that charge would cover also the handling of the mail.

## CONTRACTS AND ORDERS.

**Neath Rural District Council** propose to purchase a steam wagon.

**Southgate Council** have accepted the tender of Messrs. Aveling and Porter at £1,163 for a steam wagon, to be used in the surveyor's department.

## PERSONAL.

**Mr. T. P. Smith,** electrical engineer of Leicester Corporation, has been appointed district engineer to the local department of the Coal Controller.

**Corporal Tom M. Grant,** Royal Scots, formerly in the employment of the Aberdeen Corporation Tramways, has been awarded the Military Medal for gallantry on the field. He is the son of Mr. and Mrs. David A. Grant, Meldrum Cottage, Canal Road.

**Sec.-Lieut. Wm. C. McCallum, R.E.,** before the war a member of the engineering staff of Messrs. Dick, Kerr & Co., we noted some time ago had been awarded the Military Cross. The award has now been notified officially in the *London Gazette*, with the following paragraph describing the action for which the honour was conferred: —"For conspicuous gallantry and devotion during a hostile attack. It became evident when the bombardment commenced that the horses and vehicles would have to be withdrawn. In spite of a heavy and continuous bombardment he personally superintended the packing and dispatch of all the vehicles, and succeeded in saving the entire equipment and horses of this section. Throughout the day he set a splendid example to all ranks."

## FINANCIAL REPORTS AND MEETINGS.

**Glasgow Corporation Tramways.**—At a meeting of the Glasgow Town Council, the annual accounts were submitted, showing a surplus on the tramways undertaking of £177,552, an increase of £16,568 on the previous year, which surplus had met to the extent of £25,584, what would have been a deficiency on the accounts.

**North Eastern Steel Co., Ltd.**—The net earnings for the year, after providing for estimated liabilities to the Government, amount to £88,500, as compared with £85,300 for the previous twelve months. The dividend is maintained at 10 per cent., free of income tax, and £20,000 is added to the reserve, the balance carried forward being increased from £4,600 to £8,200.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended August 7, amounted to £72,604, an increase of £10,972 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to August 7 (eighteen and a half weeks), the total receipts were £1,171,163, an increase of £146,050 on the corresponding period of 1917.

**Blackpool Corporation Tramways.**—From April 1 to July 18, the total traffic receipts were no less than £46,040, as compared with £29,266, for the corresponding period of 1917, an increase of no less than £16,773. During the period mentioned, 7,519,518 passengers were carried, an increase of 2,336,718, and although the aggregate car mileage was increased by 61,285 to 405,298, the average receipts per car mile increased from 1s. 8½d. to 2s. 3½d.

**Wolverhampton Corporation Tramways.**—The accounts for the year ended March 31, show that the gross profit on electric traction account was £29,849 15s. 2d. To this sum is added the balance of £2,189 4s. 6d. on motor char-à-banc account, making a total of £32,038 19s. 8d. This has been allocated as follows:—Interest on capital £5,616 4s. 8d. (less interest received), income-tax on profits £307 10s. 7d., repayment of loans £6,218 13s. 5d.—£12,151 8s. 8d. Amounts appropriated to additions and improvement £198 5s. 6d., reserve and renewals fund £4,351 9s. 9d., maintenance and repairs suspense account £8,766 15s. 9d., in aid of borough rate 1918-19 £6,580—£19,896 11s.—£32,038 19s. 8d. The sum of £56,683 now stands to the credit of the reserve and renewals fund, and £19,427 7s. 10d. to the credit of the maintenance and repairs suspense account.

MANCHESTER MUNICIPAL

COLLEGE OF TECHNOLOGY.

(UNIVERSITY OF MANCHESTER).

Principal: J. C. M. GARNETT, M.A. (late Fellow Trin. Coll. Cam.).
Vice-Principal: E. M. WRONG, M.A. (Fellow Magdalen Coll., Oxford).

The Session 1918-1919 will open on 3rd OCTOBER. Matriculation and Entrance Examinations will be held in July and September. Matriculated students may enrol for 1918-19 from 1st August, 1918, and if under 18 years of age are eligible for membership of the Officers' Training Corps.

DEGREE COURSES IN TECHNOLOGY.

The Prospectus gives particulars of the Courses leading to the Manchester University Degrees (B.Sc. Tech. and M.Sc. Tech.) in the Faculty of Technology, in the following Departments:—

MECHANICAL ENGINEERING (Prof. G. G. Stoney, F.R.S.).
ELECTRICAL ENGINEERING (Prof. Miles Walker, M.A.).
SANITARY ENGINEERING (including Municipal Engineering).
THE CHEMICAL INDUSTRIES (including General Chemical Technology, Bleaching, Dyeing and Dye-stuff Manufacture, Printing, Papermaking, Fermentation Industries, Metallurgy, Fuels).
TEXTILE INDUSTRIES, MINING, ARCHITECTURE, PRINTING AND PHOTOGRAPHIC TECHNOLOGY.

ADVANCED STUDY AND RESEARCH.

The College possesses extensive laboratories and workshops, equipped with full-sized modern apparatus, including machines specially constructed for demonstration and original research.

PROSPECTUS OF UNIVERSITY COURSES OR OF PART-TIME COURSES SENT FREE ON APPLICATION.

# TRAMWAY TRACK CONSTRUCTION AND MAINTENANCE.

By R. BICKERSTAFFE HOLT,

Highways and Permanent Way Engineer, City of Leeds.

CONTENTS:

FOREWORD.
What's wrong with the Track?"

CHAPTER I.—CONCRETE FOUNDATIONS.
Defects—Causes of fracture—Method of laying concrete.

CHAPTER II.—CONCRETE MATERIALS.
Road metal—Water-gravel—Sand—Clinker-sand—Trass.

CHAPTER III.—REPAIRS TO CONCRETE FOUNDATIONS.
Patching—Partial repairs—Complete renewal.

CHAPTER IV.—TRACK DESIGN.
"Follow my leader" policy—Importance of local conditions—Effect on sub-soil—Standard methods—Transverse sleeper tracks—Effect of vehicular traffic and tramway car traffic.

CHAPTER V.—RAIL PACKING.
Pitch and tar packing—Materials—Testing and preparation of materials—Prepared tar—Pitch mixtures—Movement of rails—Packing and floating.

CHAPTER VI.—RAIL LAYING.
Bad rail packing—Rails canted or twisted—Anchoring and Padding—Rail expansion and contraction—Curving of rails—Springing of rails—Anchoring tracks.

CHAPTER VII.—JOINTS, FISH PLATES, BOLTS AND NUTS.
Why joints fail—Dished or hammered joints—Movement at joints.

CHAPTER VIII.—JOINT WELDING.
Methods of welding—Thermit welding—Electric arc welding process—Expansion and contraction—Oxy-acetylene process.

CHAPTER IX.—RAIL WEAR.
At joints—On new tracks—On steep gradients—On wheel tires—Contact of wheel and tire—Leeds special rail section—Railway rails—Depression of check.

CHAPTER X.—COMPOSITION AND MANUFACTURE OF TRAMWAY RAILS AND RAIL WEAR.
Defective rails—Composition of rails—Standard specification—Basic and acid Bessemer process—Sandberg process—Analysis of rails and rail tests—Drop test unnecessary.

CHAPTER XI.—CORROSION OF TRAMWAY RAILS.
Causes of rail corrosion—Exposure to sea water—Effect of corrosive liquid.

CHAPTER XII.—TRACK PAVING.
Effect of vehicular traffic—Cause of loose rails—Importance of quality in setts—Square-dressed setts—Nidged granite setts—Bonawe granite setts—Wood paving—Bedding of setts—Laying and ramming.

CHAPTER XIII.—RECONSTRUCTION.
Removal of tracks—Temporary tracks.

CHAPTER XIV.—SURFACE DRAINAGE AND RAIL MAINTENANCE.
Rail cleaning—Rail grinding—Rail planing.

CHAPTER XV.—SPECIAL TRACK WORK.
Design and standardisation of points—Unbroken main line crossings—Renewable plates—Switches—Mechanism for movable points—Heel pins—Tongue heel adjusters—Guard rails—Spiral tables for curves and junctions—Special track problems.

**250 pages, 10 × 6½ × 1 in., with over 150 illustrations.**

Price 10s. 6d.

# THE PARAGON EARTH CONE

is the safest, surest and most reliable. Careful tests have proved that its geometrical form provides a good contact. Will carry heavy currents for short periods without overheating. THE PARAGON EARTH CONE is made of pure copper—perforated—and filled with charcoal. This attracts the moisture and ensures a certain contact. Suitable for Electric Railways, Tramways, Telegraph, Telephone, Electric Light, Power, Lightning Conductors, etc.

## THE AUTOBUS
### IN THE TRAMWAY WORLD.

**Motor Traffic Section.**

**When "The Tramway and Railway World" was founded in 1892, motor traction was, of course, scarcely dreamt of, but the avowed object of the paper was to encourage all new methods that gave promise of usefulness.**

**In pursuance of that policy the progress of motor traction received early attention. Commenting on the historic motor parade to Brighton in 1896, "The Tramway and Railway World" predicted that**

**"It would give a prodigious impulse to transport both by road and rail."**

**Within a decade this prophecy was abundantly fulfilled and so much space had been devoted to the new industry that in 1906 a special**

**MOTOR TRAFFIC SECTION**

**was added. Every illustrated issue thus contains a section devoted especially to motor cars for Public Service, and includes articles on current topics, illustrated descriptions of new types of vehicles and accessories, and the latest news.**

**Public Service Motor Cars.**

**The importance of this section will be gathered from the fact that an increasing number of the leading municipal authorities, railway and transport companies, now own and operate large fleets of motor vehicles, including omnibuses, chars-a-bancs, motor lorries for the transport of goods, parcel delivery vans, tower wagons, motor street sweepers, and a variety of other types.**

# RAIL WELDING COMPANY

119 Victoria Street, Westminster, LONDON S.W.1

## ELECTRIC RAIL WELDING FOR NEW AND EXISTING RAILS

The only process by which the premature renewal of rails owing to defective joints can be avoided, the life of the rails prolonged for several years, and silent running ensured.

(Until recently carried out by The Rail Welding Dept. of the Tudor Accumulator Co. Ltd.)

*THIS PROCESS HAS BEEN CARRIED OUT ON THE FOLLOWING UNDERTAKINGS*

| | | | |
|---|---|---|---|
| ABERDEEN | LEITH | NEWPORT | SALFORD |
| BRADFORD | LIVERPOOL | OLDHAM | SHEFFIELD |

# More Albions and still more Albions

Why is it that some of the largest firms in the world order Albions, more Albions and still more Albions? Why is it that large firms have such confidence in Albions that they order whole fleets at a time?

It is because Albions are ABSOLUTELY RELIABLE, so simple to control, so economical; because the all-round efficiency is so high and the running costs are so low—that is why Albions are ordered again and again.

*Fully illustrated Handbook published for each Albion Model, price 3s. each.*

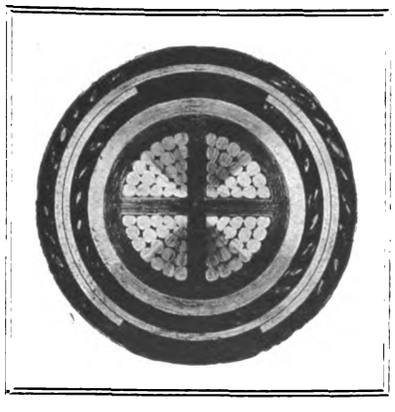
# Westinghouse Tramway Controllers

Strong and simple mechanism.
Liberal rating of current carrying parts.
Low maintenance.
All parts made to guage and strictly interchangeable, therefore all wearing parts are quickly and cheaply renewable.
Maximum accessibility for inspection and repairs.
Constant finger tension irrespective of wear and finger springs specially designed to prevent stubbing.
Simple method of cutting out either motor when required.
Powerful magnetic controller blow-out.
Ample space for incoming cables.

Westinghouse
Manchester

The British Westinghouse Electric & Mfg. Co., Ltd.,
Trafford Park, Manchester.



*·075 sq. in. Cable, Class 202, Paper Insulated, Lead Covered, Served, Steel Tape Armoured and Served.*

# HENLEY CABLES

EVERY year we manufacture tens of thousands of miles of small electric wire insulated with Vulcanised India Rubber, in addition to Paper insulated Mains.

WE have separate factories (at North Woolwich and Gravesend, England), each devoting its energies to one type.

YOU should ask us to quote for your requirements in *any* size or type of Electric Cables for use under any working condition.

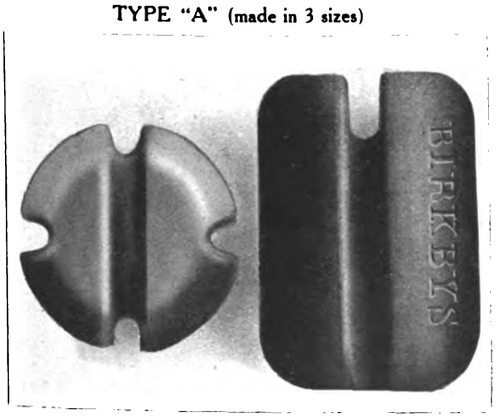
# Perfection

THIS is the standard aimed at in the Design and Manufacture of BIRKBY'S Porcelain Insulators, and having put that standard high enough we have produced an insulator of very high quality.

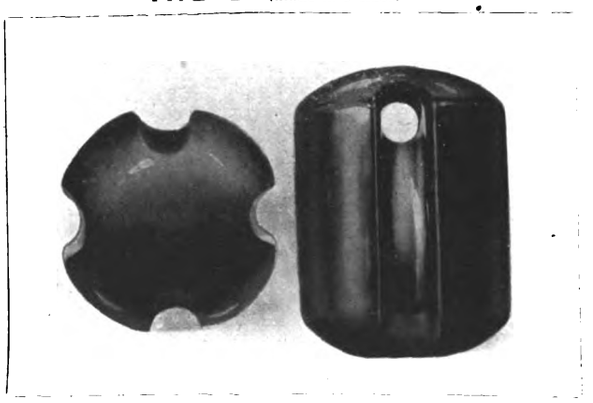
Its beautiful finish and extreme accuracy of shape immediately inspire confidence, and the user quickly proves to his satisfaction that these Insulators are sound in every way.

## DESIGN—MECHANICAL AND ELECTRICAL STRENGTH ALL O.K.

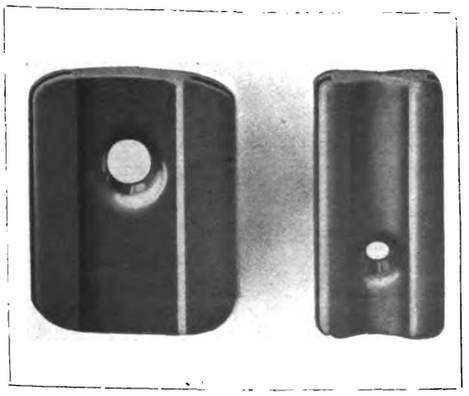
TYPE "A" (made in 3 sizes)



TYPE "B" (made in 3 sizes)



POLE STRAP TYPE



### FARADAY HOUSE TESTS

| MECHANICAL & ELECTRICAL BREAKING STRESS | | | FLASH-OVER TEST (WET) | | |
|---|---|---|---|---|---|
| Size. | Lbs. | Volts, A.C. | Size. | Volts, A.C. | Remarks. |
| Large - - | 17,203 | 27,100 | Large - - | 15,000 | Flashed over |
| Medium - | 11,200 | 22,600 | Medium - | 11,500 | ,, ,, |
| Small - - | 6,060 | 15,200 Flashed over | Small - - | 10,000 | ,, ,, |

The rainfall in the wet tests was equivalent to approximately two inches per hour, and consisted of distilled water. Room temperature, 59° F.

# Standard Insulating Varnishes & Compounds

MILES AHEAD

THE STANDARD

The popularity of Standard Insulating Varnishes and Compounds proves them to be miles ahead of any other specialities for the correct insulation of all kinds of electrical plant. You will find that the oldest and the largest firms and every manufacturer of standing use Standard Varnishes and Compounds for every form of insulation.

Standard insulating specialties are regularly used by the leading electrical manufacturing firms, lighting and power stations, railways, tramways, etc., which constitutes definite proof of their practical utility.

# Brill "Radiax" Truck.

NO sub-truck. This in itself distinguishes the Brill "Radiax" from other Radial Axle Trucks. At one stroke we dispose of the dead weight and complication of a sub-truck to carry the motor and brake gear. In the Brill "Radiax" the motor casing is utilised to connect the axle to the motor suspension, which is bolted to the transverse member swinging on a king bolt. In this way we secure simplicity and fewer number of working parts. Another outstanding feature of the design is the very simple method in which we attain return of the axles to parallel after leaving a curve. On straight track, the truck frame is resting on the two pins at the base of each swing-link mounted in the yokes. On a curve, the angle of the link causes the frame to bear on one pin. The superimposed car body weight is thus resting on one pin, and an immediate and powerful tendency is set up due to this weight to return the other pin to its groove. Thus the body weight is acting as an automatic factor in securing car stability. This simple, but effective device, permits a free radial movement, and at the same time preventing any cornerwise swinging of the car body. The brake gear has been given special attention, and is operated from the same transverse swinging member, hence the wheels and axles, the motor, and the brake gear swing or radiate as one unit. This "Radiax" Truck is operating in Great Britain with the greatest success. Details gladly sent.

## CONTENTS.

FOREWORD.
"What's wrong with the Track?"

CHAPTER I.—CONCRETE FOUNDATIONS.
Defects—Causes of fracture—Method of laying concrete.

CHAPTER II.—CONCRETE MATERIALS.
Road metal—Water gravel—Sand—Clinker sand—Trass.

CHAPTER III.—REPAIRS TO CONCRETE FOUNDATIONS.
Patching—Partial repairs—Complete renewal.

CHAPTER IV.—TRACK DESIGN.
"Follow my leader" policy—Importance of local conditions—Effect on sub-soil—Standard methods—Transverse sleeper tracks—Effect of vehicular traffic and tramway car traffic.

CHAPTER V.—RAIL PACKING.
Pitch and tar packing—Materials—Testing and preparation of materials—Prepared tar—Pitch mixtures—Movement of rails—Packing and floating.

CHAPTER VI.—RAIL LAYING.
Bad rail packing—Rails canted or twisted—Anchoring and padding—Rail expansion and contraction—Curving of rails—Springing of rails—Anchoring new tracks.

CHAPTER VII.—JOINTS, FISH PLATES, BOLTS AND NUTS.
Why joints fail—Dished or hammered joints—Movement at joints.

CHAPTER VIII.—JOINT WELDING.
Methods of welding—Thermit welding—Electric arc welding process—Expansion and contraction—Oxy-acetylene process.

CHAPTER IX.—RAIL WEAR.
At joints—On new tracks—On steep gradients—On wheel tires—Contact of wheel and tire—Leeds special rail section—Railway rails—Depression of check.

CHAPTER X.—COMPOSITION AND MANUFACTURE OF TRAMWAY RAILS AND RAIL WEAR.
Defective rails—Composition of rails—Standard specification—Basic and acid Bessemer process—Sandberg process—Analysis of rails and rail tests—Drop test unnecessary.

CHAPTER XI.—CORROSION OF TRAMWAY RAILS.
Causes of rail corrosion—Exposure to sea water—Effect of corrosive liquid.

CHAPTER XII.—TRACK PAVING.
Effect of vehicular traffic—Cause of loose rails—Importance of quality in sets—Square-dressed setts—Nidged granite setts—Bonawe granite setts—Wood paving—Bedding of setts—Laying and ramming.

CHAPTER XIII.—RECONSTRUCTION.
Removal of tracks—Temporary tracks.

CHAPTER XIV.—SURFACE DRAINAGE AND RAIL MAINTENANCE.
Rail cleaning—Rail grinding—Rail planing.

CHAPTER XV.—SPECIAL TRACK WORK.
Design and standardisation of points—Unbroken main line crossings—Renewable plates—Switches—Mechanism for movable points—Heel pins—Tongue heel adjusters—Guard rails—Spiral tables for curves and junctions—Special track problems.

To all engaged upon track construction, and even to those concerned in road engineering, we can strongly recommend this work.—*The Surveyor.*

This volume is bound to be of the greatest possible value to permanent way engineers.—*The Glasgow Herald.*

It is a thoroughly practical book. Mr. Holt has confined himself to really important matters, and has written on them with the authority that comes of practical scientific experience.—*Yorkshire Post.*

WITH MOTOR TRAFFIC SECTION

Founded 1892. LONDON, AUGUST 15, 1918. VOL. XLIV.

# SINGLE-PHASE LOCOMOTIVES OF THE SWISS FEDERAL RAILWAYS, AND NEW TYPES OF THE ATELIERS DE CONSTRUCTION OERLIKON.

By Professor HUGO STUDER, Engineer, Zurich.

The Directorate of the Swiss Federal Railways ordered in May, 1917, four trial locomotives from three Swiss firms of specialists for the electrification of the Gotthard Railway. These locomotives are now in course of construction, and will be delivered shortly. It was originally intended to carry out the trial runs with the locomotives in regular service on the Scherzligen-Brig section of the Bern-Loetschberg Railway (84 km.). Since then, however, it has been decided to electrify also the next section, viz., Scherzligen-Bern (38 km.), so that the line on which electric traction can be maintained, together with the 14 Loetschberg locomotives, now measures 116 km. The directorate of the Swiss Federal Railways has in the meantime ordered from the same three firms 20 additional locomotives to be delivered in the second half of 1919, and these are intended to serve as a first service group for the Gotthard line. This programme is to be supplemented within the next few months by trials with single couplers.

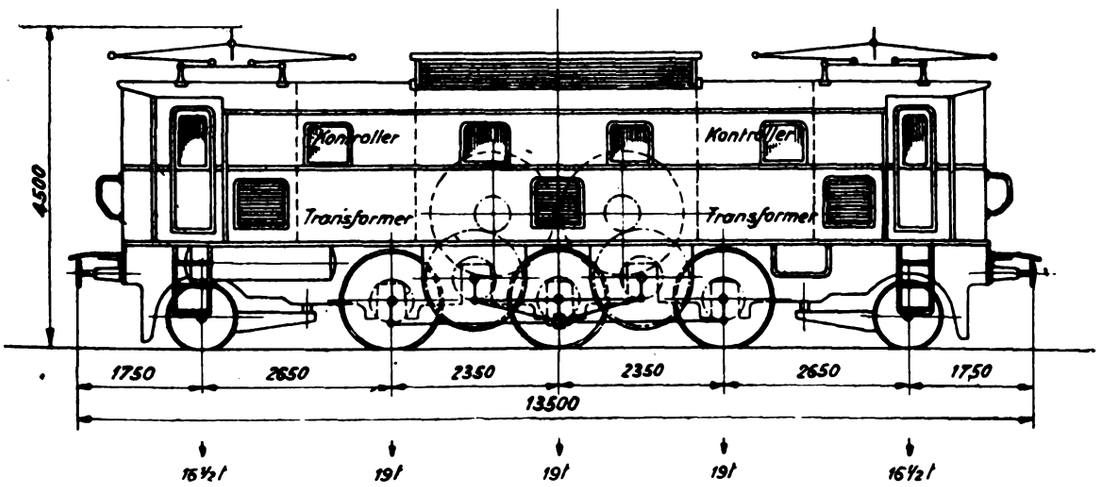

Fig. 1.—Small Electric Express Locomotive (Type 1C1).

In the following notes a few general particulars are given of the four trial locomotives referred to above, and of those for the Gotthard without, however, entering into details of design.

The Swiss Federal Railways have in view provisionally the application of three types, viz., a smaller express locomotive, a larger express locomotive, and a goods locomotive, provision being made that one type can replace the others under specific conditions. The following are principal extracts from the specification :—

(*a*) The express train locomotives must be able to make the return journey, Lucerne-Chiasso three times within twenty-four hours, with a stoppage at the termini of 15 minutes, the train weight (exclusive of the locomotive weight) being 430 tons, a small express train locomotive serving as a pilot engine on the inclines above 21 in 100. For the journey Chiasso-Bellinzona the train weight, exclusive of locomotive weight, may be reduced to 350 tons, no pilot engine then being provided. The run on the inclines of 26 in 100, the train weight (always exclusive of locomotive weight) being 215 tons with the small, or 300 tons with the large, locomotives, has to be made at an average speed of 50 km. per hour ; maximum speed, 75 km. per hour.

(*b*) The goods locomotives must be able to complete the journey between Goldau-Chiasso twice within twenty-four hours. The train weight here is to be 860 tons, a second goods locomotive being used for pushing on the inclines above 21 in 100. For the journey Chiasso-Bellinzona, one goods locomotive being used, the train weight may be reduced to 625 tons. On the incline of 26 in 100 a train of 430 tons must be able to travel at an average speed of 35 km. per hour ; maximum speed, 65 km. per hour.

Locomotives of all types must be able to run over track curves of 180 metres and point curves of 114 metres radius. The admissible weights on the trailing axle have been fixed at 12 tons minimum and 16 tons maximum, and for the driving axles at 18 tons. In connection with the goods locomotives a weight of 19 tons has been decided upon for the two middle axles,

Digitized by Google

with a distance of 2 metres between the two, provided that weight on the two end axles is reduced to 17 tons for each. The weight per metre of wheel base length is not to exceed 7 tons. On the downhill journey the locomotives are to be capable of braking at least their own weight.

The trial locomotives ordered, and now in course of construction on the basis of the above data, for which the Swiss Locomotive and Machine Works in Winterthur are building the mechanical parts, are briefly described and illustrated by the accompanying sketches.

The small express locomotive (1C1) of the Ateliers de Construction Oerlikon shown in Fig. 1 has a length of 13·5 metres. This machine is symmetrically constructed, and in general is arranged on the lines of the large Loetschberg locomotive, but with three instead of five coupling axles. The two motors are of the 12-pole compensated single-phase series type built under the Oerlikon patent. Each motor has a normal capacity of 825 B.H.P., measured at the wheel rim, with phase displaced auxiliary fields. They are mechanically inter-connected in the locomotive centre, and rest on the frame, transmitting their power on both sides by spring gears of a speed ratio of 1 : 2·84 to the two blind shafts, which on their part transmit the power by means of a driving triangle with a slot and cable rods to the driving axles, in a manner quite similar to that adopted in the large Loetschberg locomotives.

The electro-pneumatic operated reverser, ceiling fan, and brake apparatus are arranged above the motors, On both sides of the motors are mounted the air-cooled transformers, equipped with step switches and main switches, compressors, etc. The normal tractive forces measured on the wheel amount to 8,900 kg., the maximum 13,500 kg., the capacity being 1,650 B.H.P. per hour at the normal speed of 50 km. per hour and maximum speed 75 km. per hour. The total weight including the electric brake equipment is about 90 tons.

The general arrangement of the large express locomotives (1B+B1) of the Oerlikon Works is illustrated in Fig. 2; they weigh 106 tons each, and have a total length of 16·2 m. Two motors, each of 560 B.H.P. (measured on the wheel), wound with 10 poles, but otherwise similar as regards the design to those of the 1C1 locomotives, are mounted between the two driving axles of each bogie. The motors are carried rather low, and transmit their power by means of sprung gear wheels mounted on the two shaft ends through a blind shaft and slot rod on to the driving wheels. The transformer is carried in the centre of the locomotive frame resting on the two bogies. Likewise the step switches and fan, the auxiliary sets, compressor, and rotary transformer are arranged in the low end parts of the locomotive. The driver's position stands back somewhat from the locomotive ends. By adopting a single transformer the electric arrangements have been greatly simplified; whilst, on the other hand, a somewhat heavy locomotive frame becomes unavoidable. The normal tractive force is 12,000 kg., maximum 18,000 kg., the normal capacity being 2,250 B.H.P.

The operation of these two locomotives is generally devised on the lines of the Loetschberg locomotives, with the difference, however, that the operation of the step switches on the 1C1 locomotives is electro-pneumatic, the number of speed steps furthermore having been increased to 23 in order to secure favourable starting and finer speed adjustment conditions for the normal travelling positions of the operating gear. By interlocking the two step or speed controllers for the switching-in operations, and the synchronising, an increase in the number of transformer tappings has been avoided, and a quicker switching-off facility is furthermore obtained. The two locomotives are provided with electric couplings, so that one driver can operate the two locomotives by means of a so-called multiple control system.

The large express locomotive (1B+B1) of Brown Boverie and Company, has to satisfy the same conditions and to conform to the same specification as the locomotive just described, and is similar in its general arrangement. The driver's cabs are, however, right at the ends of the locomotives, and not as shown in Fig. 2.

A goods locomotive (C+C) of Brown Boverie and Company is shown in Fig. 3. This is a 3-axled bogie locomotive; each bogie is fitted with one motor pair situated between the second and third axle, transmitting their power by both shaft ends and spring gear wheels, and blind shaft with connecting rod, on to the driving rod system.

The driving arrangement is therefore similar to that of the first Loetschberg locomotive (No. 121), with the difference, however, that a motor-pair, instead of having one motor only, has been provided per bogie, the bogies having been interchanged. The tractive force of this locomotive is normally 16,000 kg., maximum 24,000 kg., the capacity being measured on the wheel, 2,050 B.H.P. The speed is 35 km. per hour normal, and 65 km. per hour maximum. The weight fixed by the Swiss Federal Railways will amount to approximately 112 tons, which fact induced the authorities to add trailing axles to the later locomotives.

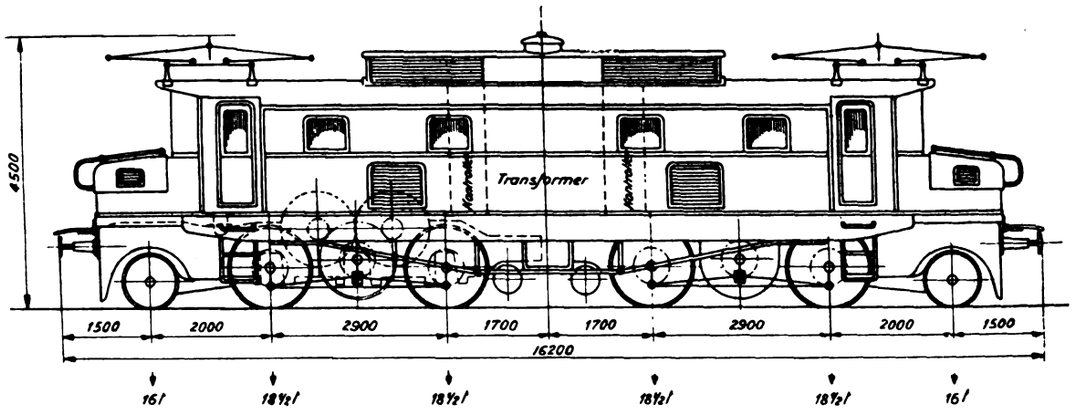

Fig 2.—Large Express Locomotive (Type 1B+B1).

The first order placed by the directorate of the Swiss Federal Railways for the Gotthard-Line electrification embraces 10 large express locomotives of the type illustrated in Fig. 3, which are being built by Brown Boverie and Company, Baden, as also 10 goods locomotives of the new type illustrated in Fig. 4, to be

Digitized by Google

constructed by the Ateliers de Construction Oerlikon and the Swiss Locomotive Works, Winterthur.

The general arrangement of this new locomotive type of the Ateliers de Construction Oerlikon, which can be built either as express locomotive or as goods locomotive, is of interest. When designing electric locomotives one can adopt—as has been the case with the Loetschberg locomotive—a complete double arrangement. This offers the possibility of avoiding a stoppage and, indeed, of maintaining if necessary a reduced service with half the equipment. This solution results in a somewhat longer locomotive and also longer wheel base and in a relatively heavy and expensive machine. It was justified on the Loetschberg Railway, for instance, where the design of a rather big locomotive had to be tackled to start with. Now, however, that the defects in the rolling stock of the Loetschberg Railway have become very rare indeed, one may avoid the duplication equipment. If, however, one single transformer has to suffice, the designer can usually do nothing better than to place it in the centre of the locomotive, and to make the latter of the bogie type. This makes a heavy locomotive frame conditional, as the main weight is situated in the centre; the consequential disadvantages are the result.

The investigations carried out by the Ateliers de Construction Oerlikon brought about the design of a locomotive type with the two bogies coupled directly with each other; the outer two-thirds of each bogie are fitted with the driving motors, and additional units which may be generally covered in by low hoods. The facilities for supervision and inspection of the large driving motors during the run may, after the excellent experience secured with commutator motors on the Loetschberg Railway, be dispensed with. On both sides of the hoods gantries are provided for the drivers. The actual locomotive case, or centre body, measures in length only one-third of the total locomotive length, and its stabilisation by a heavy framework is not any more necessary.

The centre locomotive case is carried at both ends by means of turning pins on the free inside thirds of the two bogies, and in the centre is the transformer and main switch. To both sides of the transformer, and built on to the latter, are the step-switches (for two-speed steps), so that the connections with the transformer tappings become extremely short. At the ends of the locomotive casing are the driver's cabs, on the roofs of which are mounted the current collectors. The transformer, as also the main switch-cover, form simultaneously a part of the locomotive case roof, so that the run of the high tension conductors is greatly simplified, and the unnecessary roof insulator-construction on the inside, as also a high tension room proper within the locomotive itself, is avoided.

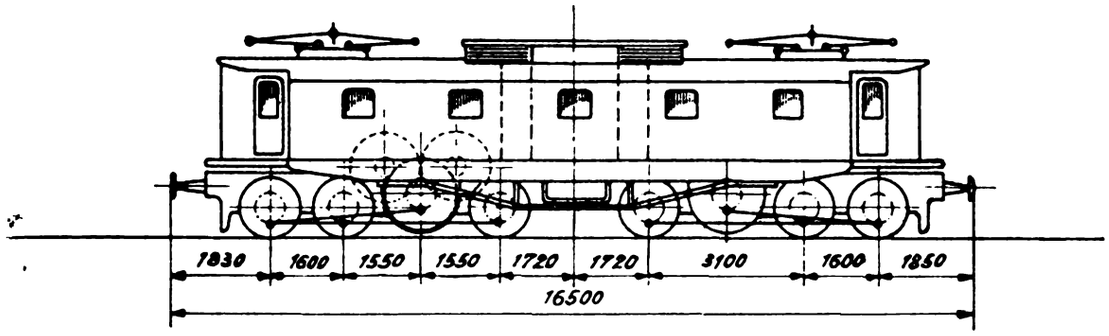

Fig. 3.—Goods Locomotive (C + C Type).

As the turning pins are in relatively close proximity, the locomotive main casing experiences very small side motions, and can therefore be built wider than would otherwise be the case, a factor of some importance for the general service. The turning pins are easily accessible, and the few flexible motor cables going over to the bogies can be very favourably suspended.

This arrangement carries with it the great advantage that the driver is not placed at one end of the locomotive, but while retaining a clear view ahead he has a certain feeling of safety, owing to the large part of the locomotive before him. The driver is also close to the switchgear, so that if, for one reason or another, he should not wish to make use of the multiple control, the service operations could be carried out by means of simple mechanical manipulations. For the depots and maintenance sheds the arrangement has furthermore the advantage that the motors and apparatus can be removed and re-erected much quicker, and also the advantage of the relatively shorter and lighter locomotive case.

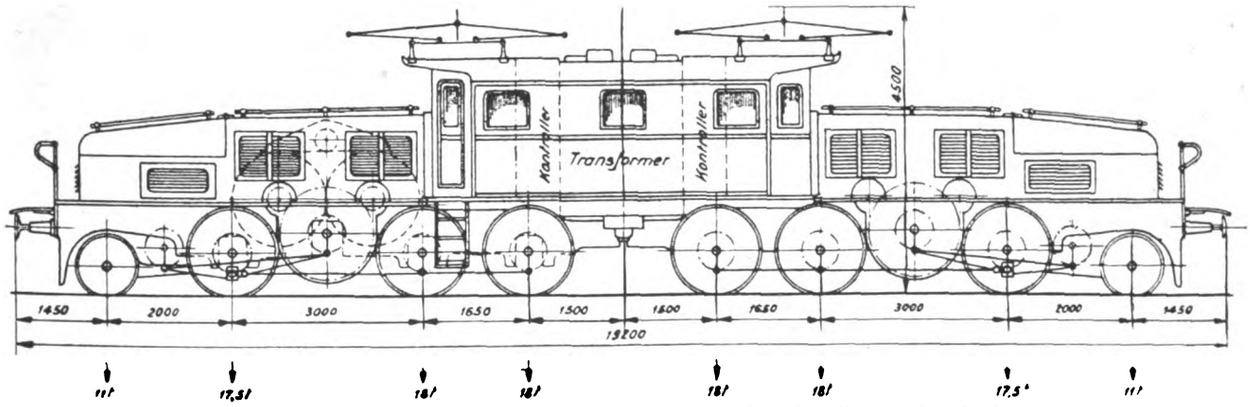

Fig. 4.—New Type of Electric Goods Locomotive with Slanting Connecting Rod Drive.

The question of spare parts for these three sectionalised locomotives is also simplified. The locomotive weight is smaller, so that additional weight may be placed on the mechanical part, the driving wheels, rods, etc.

Digitized by Google

If the motor blind shafts cannot be arranged on a level with the driving shafts other driving solutions are possible, as, for instance, that adopted for the first Loetschberg locomotive (No. 121), and C+C trial

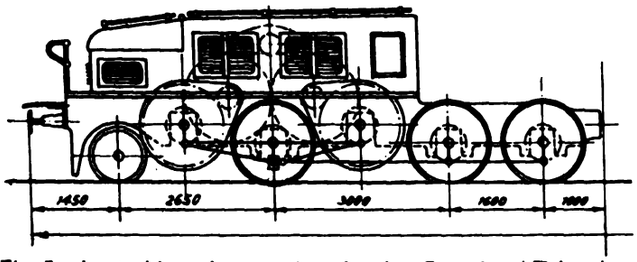

Fig. 5.—Loetschberg Locomotive, showing Crosshead Triangle.

locomotive (Fig. 3), with slanting connecting rod, representing the lightest design, or by means of a crosshead triangle corresponding to the design of the large Loetschberg locomotive (Fig. 5). Another solution is illustrated by Fig. 6, where vertical connecting rods are requisitioned.

The proposition of the Locomotive Works, Winterthur, finally adopted, and centering in the slanting connecting rod drive with auxiliary shaft, as shown in Fig. 4, represents a design with considerable merit.

maintaining the motors and the driving gear and rods, a duplication of the 600 and 800 B.H.P. locomotives is securable. Here, however, due to the space conditions appertaining, it is necessary to increase the height of

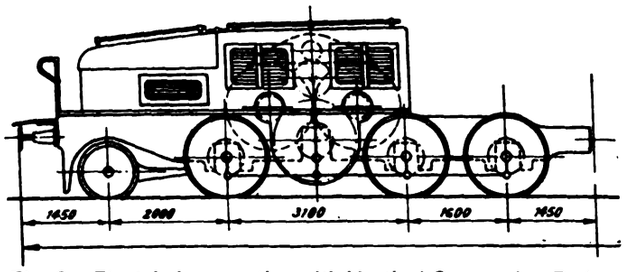

Fig. 6.—Electric Locomotive with Vertical Connecting Rods.

the hood to that of the roof, which secures for the driver a better view of the track than on some locomotives.

## ECONOMY OF COAL ESSENTIAL.

It is rather surprising to find the expert Committee which was appointed to consider the future of our coal mining industry advising that prosperity is dependent upon the free export of our coal. If this is the case, then it would seem advisable in the national interest

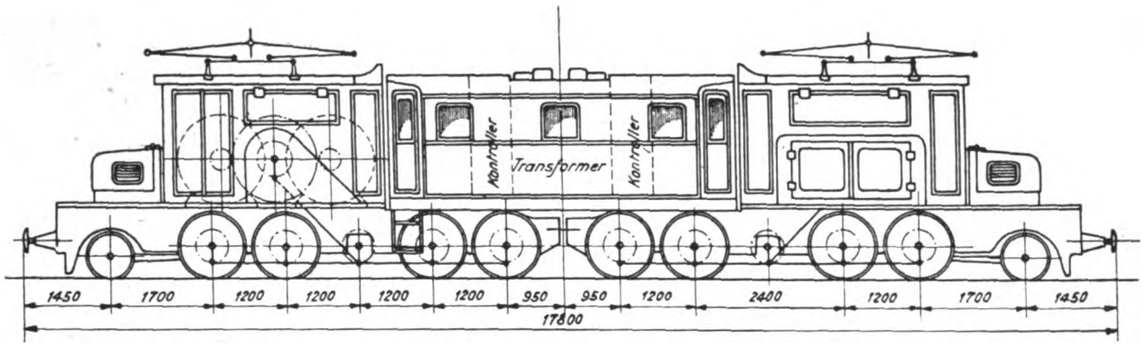

Fig. 8.—Treble Electric Locomotive for Narrow Gauge.

The speed ratio of the gears for these ten locomotives has been fixed at 1 : 4. The normal capacity of the four motors measured on the wheel is 2,100 B.H.P. The weight of the electric equipment is 58 tons, and that of the mechanical part 71 tons, giving a total weight of 129 tons, or 6·72 tons per metre, and a weight of adhesion of 107 tons.

Fig. 7 finally illustrates a type for smaller capacity,

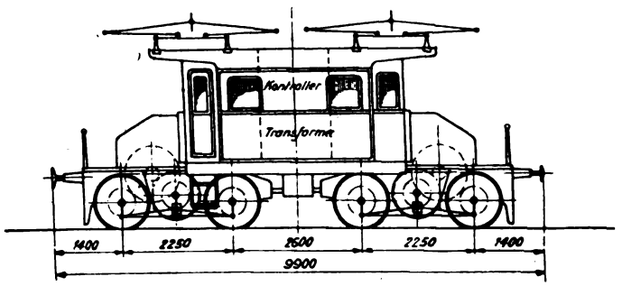

Fig. 7.—Type of Smaller Electric Locomotive.

for instance, 660 B.H.P. and a tractive force of 6,000 kg. (maximum 9,000 kg.) and 30 (maximum 45) km. per hour, which demonstrates that the system described above can also be utilised for auxiliary lines and suburban lines, as also for shunting locomotives. Fig. 8 shows further that the treble locomotive case design can be used for narrow gauge locomotives. For instance, on the Rhätische Railway, even when

rather that some compensation should be paid to those concerned in return for the refusal of free export, than that free export should be encouraged. Our coal supplies are not unlimited; our industries are dependent upon their maintenance. The big scheme that has already been put forward for the establishment of a national system of electric power supply will save waste of coal but will encourage consumption. We recognise that to increase the output of the individual worker we must place at his disposal an increased amount of power. It is found that the greater the horse-power allocated to each worker the greater is the output of a factory per head in many properly organised industries. Coal is the only fuel with regard to which our position among the nations is really favourable. It would therefore appear to be most short-sighted to encourage a process of exhausting our supplies with unnecessary rapidity. Incidentally such a policy will affect our position as regards motor fuels in more ways than one. The proper treatment of coal also leads to the production of valuable liquid fuels of our own, and altogether it would appear to be a most foolhardy policy to dissipate our fuel supplies, which are at the best inadequate, in such a way as to assist foreign industries to compete successfully with our own as regards efficiency of individual output, and to render our transport permanently dependent in a very high degree upon the purchase of fuels controlled by foreign finance, and not to be produced in appreciable quantities within our own boundaries.

# RAIL JOINTS AND CORRUGATIONS.

By H. M. DUDGEON
*(Birmingham Corporation Tramways).*

By the authorities on these subjects it is held that the coefficient of friction between steel rails and tires varies with the nature of the steel, the dry, wet, or greasy state of the rail, and with the speed of the wheel —the friction being greatest when the speed is least. If to this could be added that the coefficient varies with the vibration in the rail, it would appear to afford a very reasonable solution, not only of the vagaries of the "bump" at the rail joint but also of the mystery of rail corrugation.

That vibration is a prime factor in the destruction of tramway rails can be demonstrated by a study of the wear near the joints on any system where different methods of jointing have been tried. In Birmingham the writer is particularly fortunate in this respect, for here, owing to the narrow gauge and to the traffic density, the trouble at the joints has been very acute, and an energetic management has tried, at one time or another, almost every known device to cope with it. Owing to these different methods of jointing, the vibrations in the rails are interrupted in varying degrees, and the result is directly reflected in an extraordinary difference in the wear near the joints.

By a comparison of these different tramway, and also ordinary railway, joints, it will be found that the wear varies with the capacity of the joint to prevent the vibration in one rail being transmitted to the next. Where the ends of the rails are jointed firmly together, but can still vibrate together, there is no wear. Where the ends of rails are anchored rigidly to the concrete bed, and the vibration thus confined to one rail, there is very heavy wear, and between these two extremes of jointing may be found all states of wear.

That the heavy wear at the anchored joint is not due to any purely mechanical shortcoming is proved by the fact that it is much the strongest of any of the joints considered from the point of view of bearing stress applied in any direction. The flanges of the rails are joined by a length of heavy H girder and twelve $\frac{3}{4}$-in. bolts and nuts, and the webs by two heavy fish-plates and six 1-in. bolts. This girder sole-plate with its bolts and nuts is embedded in the concrete, and the running face of the rail before it leaves the platelayers' hands has any irregularity smoothed out with a file. On a route with a fast service of heavy cars the life history of such a joint is briefly this. In a few weeks bright and dull patches—the "rash" one might say of "corrugitis"—make their appearance at the leading ends of the rails; in a few months these have developed into definite corrugations: at the end of about 12 months there is a distinct knock clearly perceptible to anyone listening to a passing car, and from this point onwards the destruction appears to develop at a rate something akin to geometrical progression.

"Working" and "concussion" are generally ascribed as the causes of this wear, and it is reasoned that, as a fished joint must eventually start working, it is better to anchor it, and thus save the displacement of the paving. The fact that the heavy sole plate must make the concussion worse is conceded, and its use is defended on the ground that between the two evils, the increase in the bump is the less. This might be good reasoning if it were based on sound premises, but unfortunately, I am afraid, it is not. That such a joint as this could work loose in the course of a few weeks is quite inconceivable. As the surface of the joint is filed true to a straight-edge to start with, concussion alone cannot account for the wear, otherwise a bump should develop over each of the heavy transverse anchors every 8 or 9 feet. Concussion, of course, must come into play directly the trouble has got a good start, and, with a 12-ton car dropping a sixteenth of an inch at each joint, working and looseness must come with it. But it is the root cause we want to get at—the germ of the disease.

The true cause will, I think, be found to be this. When the car is travelling on the first rail, it is on a structure in motion from a vibratory point of view by virtue of the vibration in the car itself; but directly the leading wheels cross the joint on to the second rail, they find themselves on a structure at comparative rest. There is a difference in the adhesive force of the rails in these two states, and this difference at once reacts on the wheels causing them momentarily to bite better, then to slip. The cumulative effect is that long before the remainder of the rail is worn out, the leading end is hollowed out and hammered to the scrap heap. On the other hand, where the rails have been jointed in such a manner that the vibration is not interrupted at the joints, after years of heavy and fast service there is no more wear at or near the joints than there is at any other part of the rail, and indeed it is often very difficult to distinguish the joints at all. By "biting and slipping," I should like it to be understood, I do not imply that the wheels do anything in the nature of a spare revolution at each joint. It would express my meaning better, perhaps, if I were to say that the bite of the wheel varies, without mentioning anything about slipping. But biting and slipping is a very convenient expression, even if the extent of the slip is so small as to be almost immeasureable.

This theory of the cause of the wear at the joints is so far removed from conventional ideas that to most practical permanent way engineers it will appear grotesque. But remember it is based on some very hard facts, and I hope to show that it can be reasoned out without trespassing very far on the hypothetical. After all, it is generally by breaking away from convention that progress is made.

I have already mentioned that the bump at a joint such as that described starts with a bright and dull patch at the leading end of the rail, and anyone who has watched its development cannot help but discern the familiar corrugation. The only difference is that as time goes on the corrugation at the joint develops at a much more rapid rate than anywhere else. That these two troubles are due to the same cause, and that they are both amenable to the same treatment, I am quite certain. If it is reasoned that the wear at the joint is simply due to "working," then we have the paradoxical argument that the more rigid we make the joints, that is, the more we try to prevent the working, the worse the trouble gets. Besides, nowadays when economy is being preached on all hands it is as well, even as an author, to save ammunition and try to kill two birds with one stone.

My tip then for the double event, as nearly as possible as I can express it, would be this:—

(1) The adhesive force of the rail varies at different parts of the surface owing to the interruption and reflection of the vibration. Where this variation is very acute, and the momentum of the wheel is too great to allow the velocity to adjust itself to it, the surface of the rail is eroded unevenly and the result is corrugations.

(2) If a wheel rolling on a rail for any reason wanted to bite better or to slip, and it had any choice, it would do so at the points of least resistance. A variation in

Digitized by Google

the adhesive force of the rail, due to the interruption and reflection of the vibration in it, would set up such points and result in corrugations. Let us first see how these statements look from a class-room point of view, and afterwards see how they fit into actual practice.

That a difference exists between the coefficient of friction in a metal at rest and the same metal in a state of vibration may be an established fact, but so far as I can make out, none of the text books make mention of it. The nearest approach is where, in finding the coefficient between two pieces of metal by the angle of repose method, the text books are careful to explain that the table on which the experiment is carried out must be gently tapped to overcome the "static friction." If it is not tapped then the angle, and consequently the coefficient, is greater. This, I suggest, is exactly the same thing as saying that the coefficient is less when the metal is in a state of vibration, and anyone who cares can prove it for himself by carrying out the experiment, and instead of tapping the table, set the metal vibrating by any means. It will be found that the more violent the vibration, the smaller will become the angle of repose.

To appreciate in a general way how far any particular construction of tramway track interferes with the vibration of the rails is not difficult. But to try to elucidate just how much of the vibration is vertical, how much horizontal, and where any nodes and loops should be located, is quite a different thing, and happily so far as my argument is concerned, this is unnecessary. Where the ends of the rails are anchored firmly to the concrete bed it is quite evident that some interruption and reflection of the vibration must take place. Where the ends are not anchored and the fish-plates work loose, there must also be an interruption. Then again, where intermediate rigid anchors grip the rail, and where the paving is loose at one place and firm at another, the same thing must take place to a greater or less extent. For my purpose it is not necessary to assume that the reflection causes perfect nodes; these may be imperfect so long as their position remains constant.

If it is granted then that under certain conditions there is a variation in the adhesive force of the surface of the rail, the transition of this variation into corrugations might be reasoned thus. When a car is in motion at a uniform speed, with all the wheels biting perfectly, then according to the fundamental laws of kinetics all the forces at work are balanced, and their sum, if equated, would be zero. If we alter any one of these forces, that is if we make them unbalanced, the result is a change of speed and a positive or negative acceleration until equilibrium is restored. One of the most important of these forces is the friction between the wheels and the rail, and if we imagine a car travelling on a length of carefully sanded rail, and then coming to a length where, instead of sand, the rails have been liberally coated with yellow fat, it is obvious that if the tractive effort of the wheels and every other force concerned remained as before, there would be a very decided change in the speed. Let us consider then what takes place under more normal circumstances, for instance, where a car runs off a rail of good quality iron with a high coefficient of friction, on to a length of manganese steel with a comparatively low coefficient. Then for this law to stand good, either the speed must decrease or the tractive effort of the wheels increase, that is, in either case, there must be a certain amount of energy wasted. The only way that this wasted energy can be accounted for is in the wheels slipping and generating heat, and polishing the rail surface; the highly polished state of the surface of manganese steel rails appears to bear this out.

Let us imagine now a sort of compound rail built up of 3-in. lengths of iron and manganese steel alternately; what would be the result of a car running on such a structure? Obviously the momentum of the wheels could not adjust itself to such rapid changes, and the result could only be that the wheels would bite into the iron and roll or slip over the steel, and the ultimate result would be a series of perfect corrugations. If I have not already taken too many liberties with my reader's imagination, let us assume then that the difference in the biting force of the rail is brought about not by pieces of iron and steel, but is a function of the vibration of the rail, is there any reason why corrugation should not ensue? If a difference in the biting force can be established, I contend that something in the nature of corrugation must ensue, and the considerations that would govern the development of a good, bad, or indifferent crop would be these. (1) The coefficient of friction considered in the ordinary course between the tires and rails. (2) The rail joints, anchors and paving considered purely from the point of view of their capacity to interfere with the natural dissipation of the vibration in the rail. (3) The momentum of the wheels, and the weight of the cars.

Let us apply this theory now a little further to the rail joints, for at these points in contradistinction to any other portion of the rail we can form a very definite opinion of how the vibration is affected. The ordinary railway joint with its pair of fish-plates and four bolts, weighing together between 20 and 30 lb. is, I daresay, the envy of every tramway engineer. This joint must often feel proud of its robust health when it thinks of the troubles of its tramway confreres—the steel smelting plants, the cast iron cupolas, the electric and acetylene welding circuses, the rivetting hearths, the rail slotting, grinding and filing machines, and the endless array of patent fish plates, sole plates, lock nuts, and washers. Yet this simple railway joint stands up to the 100-ton locomotives with their trains of heavy coaches and 60 miles per hour speed, and is a perfect joint when the rail as a whole is worn out. "Flexibility of the track" is the usual explanation; yet when you come to think of it, there can be very little flexibility left at a joint when a 100-ton locomotive is over it. If the railway wheels wanted to act like the tramway wheels, that is, to be a grindstone, and grind out a hollow at the leading end of each rail, there would surely be enough rigidity for such a process. The secret of the joint will, I feel sure, be found in the foregoing reasoning, namely, that the flexibility of the joint transmits the vibration of the rail perfectly and there is no inducement for the wheel to bite better and grind out a hollow.

Take a tramway Thermit-welded joint; so long as this joint remains sound, it is quite impossible to distinguish it from the remainder of the rail—there is no bump or hollow of any kind. Where does its virtue spring from? Do you think it could be that it is specially kind to the rail vibrations?

Now let us take a tramway joint of a different construction. I can point out a route where—through no foresight or consideration for the vibration—the joints were made with fish-plates and sole-plates and 18 bolts, but owing to the sole-plates being flat and not embedded in the concrete, the ends of the rails could vibrate together. What is the result after 11 years of heavy and fast service? Practically none of the joints has ever been disturbed by a platelayer, and the ends of the rails are as good as the remaining 40 or 45 ft. This is surely a striking testimony to this theory.

If we apply this theory in a general way to tramway rail corrugation, it explains at once the will-o'-the-wisp nature of the trouble, as the development of the

Digitized by Google

corrugations would depend on so many varying factors. Any attempt to apply it to every aspect of tramway track would take up too much space, but I will apply it to one very puzzling aspect.

On most modern tramways, after relaying, there is generally found a brilliant crop of corrugations in the course of a few weeks or months, depending on the car service. Then the scrubbing car is requisitioned and by means of emery blocks and water scrubs them all out. At the end of a similar period of weeks or months it is usually found that in many places the corrugations have not reappeared at all ; at other places they are back, but in a much less virulent form, while at others, particularly at long-radiused curves, they are back in almost their original brilliance. This is rather a nasty state of things for many theorists, for it is evident that the mere scrubbing of the rail has not altered the side oscillation of the cars, or done away with the gearing or something equally miraculous. No ; what has happened is this. Dame Nature in the interval has come to the rescue. She did not like the vibration in the rails being maintained by reflection, so by means of the vibrations themselves she set about shaking the offending rigid points free, and the non-appearance and the altered appearance, of the corrugations, after the second cycle started, may be taken as a measure of her success. The persistence of the corrugations at the long-radiused curves is not difficult to account for. The speed of the cars on such curves is seldom or never less than when on the straight track, and the tendency for the wheels to slip, owing to the centrifugal force throwing an extra and unequal load on them, must always be greater than when on the straight. Besides, there is the difference in the radius of the outer and inner rails. If the rails then held out this special inducement for the slipping to take place at definite points the result in time would be corrugations.

Applied to railways the theory offers a very clear reason for their comparative freedom from the trouble. On the ordinary railway track, there are neither rigid joints, anchors, nor paving to interfere with or reflect the vibrations. The construction affords every facility for their natural dissipation, and when a wheel for any reason wants to bite better or to slip, the rails hold out no inducement for the bite or slip to take place at any particular points. At tunnels and deep cuttings* where, I understand, corrugations do occur, it would be necessary to take the acoustics of such places into consideration and to assume that the powerful sounds and echoes in some way interfere with the vibration in the rail. To anyone who understands acoustics, this will not appear a very alarming suggestion.

The " pitch-length " of corrugations may be some function of the diameter of the wheel or its momentum, and it is not necessary to imagine that at each individual corrugation of a series that a difference in the biting force of the rail is the original cause. If at any one point on the rail the difference in the biting force was very acute then it is reasonable to assume that a series of " bites and slips " or " bites and rolls " would take place until equilibrium was restored between the forward momentum and the rotary momentum of the wheel. As each slip burnished the surface of the rail and formed the crest of a corrugation the disease could thus spread, even if in the meantime the original cause no longer existed.

In conclusion I would mention that " rigidity " is generally ascribed as the root cause of all tramway track troubles, and that it is so, nobody, I am sure, would care to dispute. But rigidity is rather a loose term, and I hope I have shown to some extent just *why* rigidity counts.

* *Vide* THE TRAMWAY AND RAILWAY WORLD, March 9, 1911.

## ELECTRIC POWER SUPPLY IN GERMANY.

The " Board of Trade Journal " of July 11 contains some information regarding proposals for the centralisation and development of electric power supply in Germany, which have received a good deal of attention there during the past two or three years. Reform of the present scheme has been urged on four grounds :—

(1) Economy in coal and its transport.

(2) The possibility of using a State monopoly of electricity and of coal as a source of revenue. (This has been opposed on the ground that the industrial necessity for cheap power would not allow the State to make much profit out of such a monopoly.)

(3) The importance of plentiful and cheap power in industrial reconstruction, especially in the development of the electro-chemical and electro-metallurgical industries.

(4) The necessity of exploiting all the water-power resources of the country.

For some time past the general trend of opinion has been in favour of increased State action. An article by Clemens Heiss in *Schmoller's Jahrbuch* for 1917 refers to the views of some of the principal electrical experts, and a treatise by H. Bueggeln, which appeared in the numbers for July and August, 1917, of *Technik und Wirtschaft*, contains further information.

As early as July, 1916, Dr. J. Klingenberg, in a speech at the War Conference of the Verband Deutscher Electro-Techniker, urged that the generation of electric current should be nationalised, while leaving the distribution and the retailing of power in the hands of existing undertakings. He opposed the distribution of current by the State on the grounds that that part of the electricity business, especially the extension of clientèle, required an adaptability to varying conditions which would be more likely to be found in the existing non-State bodies than in a Government department. He also contended that the State would be expected to extend uniform treatment to all users of current, whereas the best business interests required that there should be some scope for discrimination in rates. By confining its action to the generation of electricity the State would interfere as little as possible with existing rights, and it would create a desirable intermediary between itself and individual consumers.

Another expert, Dr. Voigt, also advocates centralisation. He, however, has been in favour of a short-distance scheme in place of Klingenberg's long-distance one. He thinks that the existing large works should be extended and inter-connected, and that the desired centralisation should be reached by gradual development.

Bueggeln believes that in spite of the usually unwieldy methods of State administration, a form could be created which could hold its own when compared with private concerns. He considers that power stations should be linked up, but believes that turbo-generators of 15,000 to 20,000 KW. are the most economical, and that there is no advantage in having larger units.

Professor Ballod, in one of a series of articles on " Finance after the War," which appeared in the *Europaische Staats und Wirtschafts Zeitung* in the Autumn of 1917, says that he is in favour of a State monopoly on grounds of fuel economy, as well as on financial grounds. He thinks that all the railways and all industrial and agricultural plant should be electrified, and that electricity should be produced in large plants of 100,000 KW. and distributed in high tension mains of 100,000 volts. He calculates that by electrifying the railways it would be possible to save at least one-third of the coal consumed by them, which amounted to about 20 million tons in the year immediately before the war. He urges that the State should endeavour to reduce home consumption of coal by one-third, and should reckon to make most of its profit on coal for export.

**Trade After the War.**

At last the Government of the United Kingdom have taken the plunge. On July 24 Mr. Walter Long, Secretary of State for the Colonies, announced in a speech that the War Cabinet had approved of a scheme of preference within the Empire. Mr. Bonar Law, Chancellor of the Exchequer, in answer to questions in the House of Commons on July 29, stated that the Government had decided on the adoption of a policy of imperial preference after the war. Thus the Home Government have at last put themselves into line with the Governments of the Dominions. This country is actually going to have the same powers and rights as are enjoyed by practically every other country in the world. A clearly worked-out scheme is already in existence and has the approval of the Government, and the subject of preserving for the Empire raw materials produced within the Empire has a prominent place. Thus a great principle has been established. It clears the ground for the favourable consideration by the Government of the numerous recommendations by expert committees of their own appointment for fostering and promoting British trade and for preventing German competition and "peaceful penetration." There should be no more of the latter while human memory endures. We are promised a general election in the coming winter, but whatever may be the result of it, no one can imagine that the people of this country will send to represent them in the House of Commons men who would reverse the policy which is now being carefully, if slowly, developed. The Government are acting in concert with the Governments of the Dominions, and a fair prospect for the times to come is opening out. In the developments which may be expected, none offers a greater prospect than that associated with electrical industries. It has to be remembered that these industries suffered in two ways, while many of our other forms of activity suffered in only one. They suffered from destructive foreign competition under the system of free imports, and they were throttled by legislative action at home. As their repression has been so great, correspondingly great should be their rebound when all incubus has been removed.

**Housing and Tramways.**

A great deal is being said about the necessity of a great scheme of new housing for the country. In this direction as in others, people's minds have been enlarged during the war, and not only are arrears of house building to be made up, but the previously existing deficiency is to be removed. According to various statements some 300,000 houses are, with the aid of the State and of local authorities to be provided. This implies large additions to suburban areas, and possibly the formation of new small towns and villages. There are not to be more than twelve houses to the acre, so that the population may be spread out under healthy conditions. All this means that this population must be provided with transport facilities. If all the prophecies are fulfilled, the working classes are to continue to receive high wages and their standard of living is to be improved. That being so they will demand efficient means of transit along miles of roads where at present no facilities exist. But nothing has yet been done to meet this requirement. For many years the country has suffered under the paralysing influence of the Tramways Act of 1870—a measure wholly unsuited to the present

Digitized by Google

day. Private Bill procedure and even procedure under the Light Railways Act has been a constant hindrance to the promotion of new schemes. The Departmental Committee appointed by the Board of Trade to consider the position of the electrical trades after the war, in their recent report, had some very strong remarks on the Tramways Act, and particularly on the stifling effect of the purchase clause of that measure. They recommended a thorough reform of the legislation and conditions affecting the promotion, construction, and operation of tramways and light railways. As this proposal is only one of a number relating to electrical industries, and as it comes from such an influential quarter, there is some ground for hoping that a reform will be carried out. If facilities are not given for tramway and light railway extension there will be comparatively little hope for the great housing scheme. Long suburban and inter-urban lines are required, and it is obvious that for such purposes private enterprise must have freedom. Just as in the domain of electric power supply, we are outgrowing municipal limits, and large organisations covering wide areas are required. Safeguards for the public interest may be needed, it is true; but there is no difficulty in providing them. The difficulty is to avoid having too many or too stringent safeguards which in the past have prevented development. The new earth which the people are promised after the war will not be realised unless there is more freedom and encouragement to enterprise than there has been in the past. We believe that such incentives will be given, and that the electric tramway industry will as a consequence largely expand, and become a much greater factor in the development of the national resources than it was before the war.

---

**Sheffield's Victory—Tramway Goods Service.**

Strange indeed would it have been if the Sheffield Corporation had failed to gain the approval of the Local Legislation Committee of the House of Commons to their application for powers to use the tramways for the conveyance of goods and parcels. Although there are many Tramways Acts conferring sanction for the conveyance of goods, minerals, and parcels, powerful opposition was invoked against the Sheffield Bill, which also includes the conveyance of animals. In addition to the objections raised to the whole scheme by the Great Central Railway Company, opposition almost as strong was offered by the National Union of Horse and Vehicle Owners and the local Horse and Motor Owners' Association, who also asked for the insertion of protective clauses. Unfortunately for the opposition, the circumstances of the present day belie their assertions that they are capable of providing all the facilities required. In this connection the local Chamber of Commerce brought their views before the Commons Committee. The Chamber favoured the exercise of the powers sought within the city limits, but outside of that area they limited their approval to the carriage of tradesmen's parcels. Such a restriction, however, would be contrary to the spirit of the day, as expressed recently by the Board of Trade Committee on Electric Power Supply. That Committee's report referred to the present system under which electricity is supplied by a large number of small areas as being the result of a policy adopted at a time when electrical engineering was in its infancy. Besides, in all the discussions on the subject of goods carriage, emphasis has been laid upon the need for inter-running, and where that desideratum cannot be achieved upon rails the provision of road vehicles has been insisted upon. Sheffield seeks to provide such facilities by taking power to employ any kind of road vehicles necessary to carry on a receiving and forwarding business. It is satisfactory that the Committee granted the powers asked for and also approved of the charges to be made. While it is not to be expected that the Corporation will be able to do much to put their powers into effect during the war, particularly as regards the provision of special rolling stock, there is no reason why they should not be granted priority certificates to enable them to obtain road motor vehicles. Possibly something might also be done in the direction of constructing sidings to works and warehouses, though it would be impossible to provide the proposed junctions with neighbouring light railway and tramway systems. Now that the Sheffield scheme has been sanctioned, no time should be lost by other authorities in formulating plans

Digitized by Google

either for carrying out as soon as possible the goods haulage powers that they may possess or in taking steps to secure what should now become known as the Sheffie'd clauses. The necessity of doing everything possible to augment the transport facilities during the present crisis is shewn by the fact that the Road Transport Committee of the Board of Trade have requested tramway authorities to consider the steps they can take, either by day or night, with a view to saving horse haulage and petrol. Bradford Tramways Committee, for one, are considering what use can be made of their lines at night. The authorities must not forget that the Board's request for a return comes as a mandate, for the Transport Committee's terms of reference included electrically-propelled vehicles. It is likely that when the returns have been digested, orders will be issued to tramway authorities, though it is advisable that before this is done there should be collaboration with the experts of the Board of Trade Tramways Committee. Already all other road vehicles carrying loads above 15 cwt. have had to be registered and licensed with the police. The sequel to this step was seen in the issue on July 31 of a Defence of the Realm Regulation, which controls the collection and delivery of goods, the area of collection, and the number of collections and deliveries.

**Car Crews to Aid Economy.**

More efficient service by motormen and conductors is to be welcomed, especially if it assists managers to do more than comply with the Board of Trade order to effect a 15 per cent. reduction in coal at the generating station. All undertakings are not so favourably situated as the London County Council and some other undertakings for obtaining coke breeze and other economical substitutes to secure the reduction in the consumption of energy without curtailing the services. Every authority, however, should encourage their employees to operate the cars in such a manner that not only will energy be saved, but the employers will secure other benefits. The latter have been enumerated to the London County Council by Mr. A. L. C. Fell as comprising less wear and tear in car equipment and plant generally, reduced loading of the cables (many at present being over-loaded), a d a reduction of the peak load at the generating and sub-stations. After consultation with the employees, a bonus has been offered to County Council motormen and conductors for economy of current, the payment to be equal to 50 per cent. of the value of the direct saving of fuel, calculated on the average number of units used per car mile during the year 1917-18. The amount then was 2·27 units, measured at the bus-bars in sub-stations. It is anticipated that with a saving of energy of 10 per cent., at the present average price of fuel, there would be a fall of about £6,350 in the cost of coal per quarter. Fifty per cent. of that saving distributed equally to drivers and conductors would represent a sum of about 12s. 5d. per quarter a head. The results obtained in various towns with car meters for years past stamp this estimate as being easily fulfilled. The only difficulty, we imagine, will be that with many motormen less thoroughly trained than was the case prior to the war, there will be a need for refresher classes. It will be easier to secure the desired object, both with the old hands and with the novices who are now coming forward in greater numbers as drivers, if the instruction is introduced as part of the efforts needed to help win the war. That purpose is what the call for economy amounts to, and it will be a stimulus to remind car crews that their goodwill can do something to make up for the reduced coal output entailed by the Army's call upon the miners. Managers in the United States have for a year past given attention to fuel economy, and one of them, Mr. W. Arthur, of New Haven, Connecticut, has written a handbook on efficient car operation for distribution among the platform men. A more effective exhortation we have never read than the four pages of extracts that were published in the May issue of the Journal of the Tramways and Light Railways Association. Though mainly concerned with the motorman, the handbook contains a few rules for the conductor also, and shows that co-operation between the two will enable coal consumption per car mile to be kept down to about 6 lb., whereas a careless driver may cause twice as much to be consumed.

**Municipal Tramway Association Conference.**—The annual meeting will be held at Leicester on Thursday and Friday, September 26 and 27, under the presidency of Alderman S. Flint, J.P., chairman of the Leicester Corporation Tramways Committee.

# Tramways and Light Railways Association

## Tenth Annual Congress, held in London, July 12, 1918.

**PRESENT POSITION OF THE TRAMWAY INDUSTRY—NATIONAL AWARDS TO EMPLOYEES. NATIONAL INDUSTRIAL COUNCILS AS APPLIED TO TRAMWAYS. INCREASED FARES—THE COAL RESTRICTION ORDER.**

The twenty-first annual meeting of the Tramways and Light Railways Association was held at Caxton Hall, Westminster, on July 12. Pending the arrival of the president, the Rt. Hon. Viscount Chilston, and in the absence through illness of the chairman of the council, the Hon. Sir Arthur Stanley, G.B.E., M.P., the chair was taken by Mr. R. J. Howley, the vice-chairman.

Mr. Howley said he knew that the announcement he had to make would be a very great disappointment to everyone, namely, that the chairman of the council, Sir Arthur Stanley, had been taken ill with influenza the previous evening, and that day was confined to bed. The Secretary had seen Sir Arthur, and found that everything had been prepared for that meeting, so that they would be able to hear his own words.

The Secretary (Mr. A. de Turckheim), after reading the formal notice convening the meeting, together with the certificate of the auditor, read the address of the chairman of the council, which was as follows :—

### SIR ARTHUR STANLEY'S ADDRESS.

The accounts for the year 1917 were circulated in our January journal. The annual meeting in pre-war days was usually held early in the year, but owing to the war we are following last year's precedent, and are combining the annual meeting with the annual congress and dinner. The revenue for 1917 amounted to £720 from subscriptions, and £28 from interest on deposits and war loans, as against £730 and £25 respectively for last year. The expenses amounted to £662, as against £647 last year. After writing off 15 guineas on subscription account, allowing 10 per cent. for depreciation of furniture, and £14 for income-tax, under the new arrangement, there remains a net credit balance of £87 to carry forward, which, added to balances brought forward from previous years, gives us a total balance of £608 to carry forward; £550 of this is invested in War Bonds. There are no liabilities. Before the resolution approving the accounts is put, you will wish me to say a few words with regard to the work done by our Association during the year.

#### Tramways (Board of Trade) Committee.

The outstanding event was the setting up by the Board of Trade of the "Tramways (Board of Trade) Committee." I think we have ample grounds for congratulation in the fact that out past vice-chairman, Mr. James Devonshire, was appointed chairman of that committee by the President of the Board of Trade. Everyone who knows Mr. Devonshire will agree that no better choice could have been made. We were invited to appoint two representatives from this Association on the committee, and your council unanimously invited Mr. Stephen Sellon, one of our vice-presidents, and Mr. Howley, our very active vice-chairman, to represent us. I am glad to say they both agreed to serve, and they are both giving a great deal of their valuable time to the strenuous and anxious work required to be done.

The setting up of this committee was urgently needed, as a great variety of questions had to be dealt with, covering the whole field of tramway work, and whereas previously applications had to be made to numerous widely-scattered Government departments, the new system evolved order out of chaos, and at least we know where to go, to whom to apply, and what procedure to follow. It was a serious task to undertake, and sincere thanks are due to our two members for having consented to undertake it. Naturally we do not all get all we want, but I think we should realise the difficulties which prevailing conditions have created, and which the committee have to contend with.

#### National Awards.

The increased cost of living brought on by the war led to a perfect epidemic of demands for increased wages on the part of our employees. At first these were spasmodic, but as time went on they became universal. At first the demands were put forward locally in accordance, more or less, with local conditions. Later on it became apparent that want of uniformity in granting bonuses, etc., led to incongruities and inconsistencies, and matters were further complicated by the fact that other allied industries, and especially munition works all over the country, increased their rates of payment, with the result that classes of men working in close touch with and near to other classes of men felt that they were not benefitting to the same extent as their neighbours. Great unrest resulted, and the Committee on Production, set up to deal with these questions as they arose, made large numbers of awards, almost from week to week, as they were bound to do, until the whole question became hopelessly confused and complicated. The men's unions realised the difficulty, and for the first time in the history of tramways a demand was put forward by them for a national award, which should include or consolidate all bonuses previously granted. This was the demand for a 20s. bonus, and it was addressed to the two Tramway Associations, as representing between them practically every tramway undertaking in the United Kingdom. The difficulty we were then faced with arose from the fact that under our existing constitution we are not a trade union, and cannot bind our members on any question of wages, etc. We got over the difficulty by calling a special meeting of our company-owned undertakings, our municipal members taking what action they thought best through the Municipal Tramways Association. The result of these special meetings was that a committee was formed with powers to represent the companies before the Committee on Production. The arbitration took place on March 8 last, and an all-round war bonus of 20s. was granted to tramway employees, thus bringing them all into line. Obviously, an all-round standard payment must bear more heavily upon smaller outlying undertakings, and some objections were heard. It is open to those members who do not wish to be interfered with to notify their desire to be excluded from the arbitration, as no compulsion whatever rests upon them as members of the association; but it is questionable in these days of highly organised labour whether any permanent benefit would accrue to them for such exclusion.

Quite recently we received a further demand on a national basis for a 12½ per cent. increase or its equivalent, and for a revision of the earlier award to provide equal payment for women as for men, both as regards war wages and basic rates. Due notice thereof was given by us to all our company members, and they practically all agreed to leave it to us to represent them at the arbitration. This took place on July 3, with the result that the award of July 9, now before you, was made. This award increases the 20s. bonus to 25s. per week, and is in full settlement of any claim with respect to the bonus of 12½ per cent. The claim for equal bonus to women fails. Before saying anything further I am sure I shall be voicing your wishes if I express to Mr. Howley our appreciation of the very able way in which he put our case at both arbitrations. In spite of all the other claims upon his time, he agreed to be our spokesman on these two occasions, as well as before the Select Committee dealing with the question of "Increase of Fares." It entailed a great amount of work, and I do not think he missed a single point in his arguments on our behalf.

#### Increase of Fares.

Well, it is obvious that you cannot go on indefinitely paying out more and more money without feeling the strain. Indeed, the position of many of the smaller undertakings was, or is, becoming increasingly precarious, and as far back as 1916 we took steps with a view to obtaining relief by pressing for powers to increase fares. Nothing was done, however, in spite of all our efforts, until in April last a Select Committee of the House of Commons was appointed by the President of the Board of Trade to go into the matter. Exhaustive evidence was given by both Tramway Associations, and when the Select Committee issued their report on June 7 we had some excuse for hoping that at any rate a measure of relief would be forthcoming before very long. I greatly fear that those hopes were somewhat premature. Instead of a short Government measure dealing with tramways, which could have gone through quickly, and thus enabled some of the hardly-hit concerns to take advantage of the summer months to recoup themselves to some slight extent, we are now faced with a controversial Bill dealing with gas, water, electricity, and tramways, the provisions of which, as they stand, are inapplicable to tramways generally. This is a severe disappointment to us, but we must continue our efforts with a view to amending the Bill so as to secure what benefit we can for our members.

#### Industrial Councils.

I understand that this question will be discussed further this afternoon, and I only wish to say that when the Whitley Report

Digitized by Google

was issued we were among the first to consider the matter. You will doubtless hear how, in conjunction with our municipal friends, we have had a number of conferences with the men's unions and representatives of the Ministry of Labour. I believe that I may say that a draft scheme for setting up a National Council for Tramways is all but completed, and will be submitted for your approval before long. Any attempt to bring into closer co-operation the representatives of the employers and employed for their mutual benefit and for that of the great general public should be encouraged, and if it is to lead to a better understanding of each other and to more harmonious working in the future, no efforts on our part will be spared to bring this about. I have only touched on a few of the more important matters which your council and our various committees have been dealing with. In addition to these we have been busy with the following subjects:—Decimal coinage (especially in its application to tramways), standardisation of overhead line material, national service, deferred repairs and statutory depreciation allowances, women drivers, steel tires, etc. In the near future we shall be devoting some attention to the supply of tramway materials after the war, the Board of Trade Committee Report on electric power supply, which contains clauses dealing with tramway generating stations, and many other matters.

---

The accounts and balance sheet for the year ended December 31, 1917, having been unanimously adopted,

**The Secretary** read a note from Sir Arthur Stanley expressing sincere thanks to the retiring members of the council, Messrs. James Devonshire, W. G. Verdon Smith, C. D. Stanley, J. B. Tippetts, E. Hatton, and W. T. Robson. He understood that Mr. Robson had had a serious illness, and they all hoped that he might soon be completely restored to health.

**The Chairman** proposed six gentlemen who had been nominated by the council to fill the vacancies created by the retiring members. It had, he said, been rather difficult this year to maintain the balance of representation as between their municipal friends and their company friends on the council, because there were certain claims, if he might say so, owing to services rendered, which they wished to recognise. Therefore it was with pleasure that he proposed the election of Messrs. S. E. Baker, A. L. Barber, F. Coutts, E. H. Edwardes, H. England, and H. L. White.

**Mr. Stephen Sellon** formally seconded the motion.

**Councillor R. Mayne,** as representing a municipal corporation, asked how many on the Council of the Association were members or representatives of municipal corporations, and how many would be the total if the chairman's proposal was carried.

**The Chairman** replied that there would be three representatives of corporations out of eighteen, viz., Messrs. I. Bulfin, T. B. Goodyer, and G. W. Holford.

**Mr. E. Hatton** asked if this was a proper representation of the various sections of their Association, viz., municipalities and large and small private companies. They did not know whether any issues would shortly be joined between municipalities and companies, but if the former were not properly represented on the council, did they think that it would add to the smooth working of negotiations between those bodies? He moved an amendment to leave out one name and to substitute that of Councillor Mayne, of Newcastle.

**Mr. A. L. C. Fell** said that if anything could be done to cement the good feeling that had been brought about during the last few years he thought it would be a very good thing. During the last few years there had been a most intimate co-operation between the two sides of the Association, and it would be a great pity if it were felt that the organisation were gradually drifting into a purely company association. He therefore hoped that the council would see their way to put a few more municipal representatives on the council, so that the Association might represent more or less the tramway industry as a whole.

**Councillor R. Mayne** suggested that the Association was something like the Siamese twins. The connection between the two branches had grown up gradually, and it would be unfortunate if at this moment any differences should arise. He was still as positive as ever in his belief that they should maintain the connection, and if possible improve and strengthen it. Mr. Fell took the same view apparently, and it would be an immense advantage in keeping up the connection if he would serve, and, with Mr. Fell's permission, he wished to nominate him as a member of the council.

**Mr. Hatton,** in seconding the nomination of Mr. Fell, explained that in rising to speak as he had done he had intended nothing personal. He was simply considering the constitution of the Association. He would therefore second Mr. Fell's nomination with much pleasure, and he would also add the name of Mr. L. E. Harvey, of Ilford.

**The Chairman** replied that in order to meet the wishes of several speakers the council would accept the proposal that the names be put separately, and that a ballot should be taken.

Messrs. Hatton and Mason were appointed scrutineers, and the following gentlemen were subsequently declared to have been chosen as members of the council:—Mr. H. England, Mr. E. H. Edwardes, Mr. A. L. C. Fell, Major F. Coutts, Councillor R. Mayne, and Mr. S. E. Baker.

Colonel A. W. Chambers, the retiring auditor, was unanimously reappointed for the ensuing year, and received the thanks of the Association for his services.

**The Chairman** said he thought that it was a very healthy sign in one way that they should have had a vote on the reconstruction of the council, and he thought it would be a desirable plan if they could vote in a similar way at each annual meeting. He proposed to put the matter before the council for consideration.

This completed the business of the annual meeting, which was followed immediately by the annual congress.

---

# THE ANNUAL CONGRESS.

## NATIONAL AWARDS.

### THE 20s. BONUS AND 12½ PER CENT. ADVANCE.

**The Chairman** (Mr. R. J. Howley) said they proposed to discuss as far as time would allow four subjects, namely, National Awards (the 20s. bonus and 12½ per cent. advance), National Industrial Councils, Increased Fares, and the Coal Restriction Order. On the first question of wages and national awards, he had been asked by the Secretary to say a few words. As they had heard in the address from Sir Arthur Stanley, the Association was faced with some difficulty in dealing with the question of wages and awards, for the reason that as the Association was not allowed to act as a trade union they were debarred from dealing with the question of wages. Therefore it was necessary, when the national demand for 20s. was under consideration last March, to call a conference. They called a conference of all company-owned undertakings (a similar conference had been called by the municipalities with regard to their interests), and they had to get the approval of that conference to their taking part in the meeting before Sir George Askwith, and subsequently in the arbitration which took place before the Committee on Production. At that time a small committee was appointed to deal with these matters, and that committee had been dealing with them since, and had dealt with the question of the application of a 12½ per cent. further bonus and with the demand that women should be paid the same war bonus and wages as men. In some few instances they had criticism as to the necessity of dealing with these questions of wages on a national basis; up to the end of last year they were generally dealt with by each undertaking separately. But early this year the two Tramway Associations negotiated with the National Transport Workers' Federation, which undertook to represent the whole of the tramway workers of the country, and they had the national claim for 20s. a week as the main plank of their platform. Well, the men's side having come together, and having put forward their claim on a national basis, it would have been very regrettable, he thought, if the employers' side had not met them in combination also to discuss the matter from the point of view of its applicability generally throughout the industry. He did not wish them to think that it necessarily followed that the same basic rate of wages would have to be paid in every district throughout the country, because these national questions were being dealt with by the whole industry, by representatives of the employers on the one side and by the National Transport Workers' Federation on the other. He thought that different basic rates of wages paid in different localities must follow, and later, when the question of wages and basic rates of wages, rather than war wages and war bonus, came to be dealt with, there would have to be some form of local association competent to deal in each locality with the wages questions which arose in that particular locality. That, he thought, was one of the objects which would be attained later on, when the Whitley Report was put into effect, and they had National Industrial Councils dealing with national questions and national awards. District councils would then no doubt deal with local affairs in each district, and would take into consideration the difference between the basic rates in one area and in another. In connection with the company-owned side of the Association, he thought a standing conference would have to be appointed representing the companies, and it was suggested that the difficulty of not being able to represent the companies directly on questions of wages might be got over by this standing conference, which would appoint the Association as its secretary. It might also appoint as an emergency committee the members of the council who represented the privately-owned tramways. In that way there would be legally two different bodies, that is to say, the Tramways and Light Railways Association, who could not deal with wages, and a Conference of tramway owners formed practically into an Employers' Federation. By appointing the Association as secretary and certain members of the proposed council as an emergency committee, they would get joint consideration of the matter and the speedy settlement and discussion which he thought would be effective, and would meet the conditions. On the municipal side, there would be a somewhat similar body, as he understood that they were in exactly the same difficulty in regard to the constitution of that Association. Up to January last the number of applications was as a rule small, and had not been coming forward very rapidly. He thought 6s. 6d. was about a fair

Digitized by Google

average for war bonus at the end of 1916, and it had risen at the end of 1917 to about 12s. throughout the country. Then, as they knew, in March, 1918, it jumped up to 20s., and then a few months afterwards they got the application for 12½ per cent. It was interesting to note that application for 12½ per cent. was made on behalf of certainly one union quite early in the year—about the time the arbitration for the 20s. took place. At that arbitration the question was raised as to whether the men were going to continue to come forward every few weeks demanding a further increase, and also whether individual unions were going to press for increases while the employers' representatives were negotiating with the National Transport Workers' Federation. Although no definite statement was made, it was generally said by the other side that they proposed to claim a revision of the award at intervals of four months; he thought that was the period in the engineering trade in which awards came up for revision. Mr. Hamilton, who was the representative of the Municipal Association, and himself got into touch through Sir George Askwith with Mr. Williams, and they put it to him that they did not consider that was carrying out in a fair way the undertaking that they should recognise the National Transport Workers' Federation as the body which embraced the employees; and they asked that the demands by individual unions on individual undertakings should cease. Mr. Williams met them in a very fair way, and he got this application withdrawn at the time, but he stated that no doubt they would hear more about it at a later stage in the form of a national demand, and, as they knew, it resulted in the further arbitration which was considered a short time ago by the Committee on Production, whose award was issued the previous day.

The award referred to various matters, and after the introductory part it provided (Mr. Howley then proceeded to read clauses 5 to 14 of the award of July 9, 1918). The award was signed by William W. Mackenzie, John M. Denny, John Barker, and countersigned by H. J. Wilson, secretary.

He thought that it was satisfactory in a sense. They felt that 5s. was the figure which would be given in the case of the men, following on the decision in the case of the Master Carmen's Association in London, which also went before the Committee on Production. In the case of the women, they could feel that at any rate there was no need to pay further war bonuses to the women employed in the tramway industry, where they were getting very excellent wages or remuneration for their services as compared with any other class of work in which they might be engaged. He hoped that these few remarks might encourage discussion, and that the members would give their views.

**Mr. A. L. Barber** (secretary, Metropolitan Electric Tramways) said that there was one point in the award about which he should like to hear a word. There was no reference to clerks. He remembered that both the Chairman and Mr. McElroy, who represented the Municipal Tramways Association, distinctly dealt with the question of clerks at the hearing, and he understood that this award did not apply to clerks. Would the chairman say whether or not that were so?

**The Chairman.**—The award applies to the two parties who appeared before the Committee on Production. If the clerks belong to a union which is affiliated to the National Transport Workers' Federation, you will probably find that they claim that the award is applicable to them, but I think that in very few cases do they belong to that union.

**Mr. Ernest Hatton** (general manager, Newcastle Corporation Tramways) asked if the committee had under consideration or would they take into consideration the question of wages in the tramway industry after the war. He thought that was the most important thing that tramway people would have to consider. He was of the opinion that if the wages of tramway men could be dealt with in the same way that the wages of miners and steel workers are dealt with, that is, having a basic wage, and that according to the prosperity or otherwise of the industry in the area or of the undertaking their basic wage would rise or fall, it would be advantageous because it gave them an interest in the work they had in hand. He knew there were difficulties in dealing with the proposition, but he did not think those difficulties insurmountable. He did not know whether the Association had dealt with that point or considered it, but he thought that it was a thing they should consider. The other point was in connection with coal. At the present time they were directed by the orders of the Coal Controller as to what price they paid for coal, but of course the people who supplied them would rather be without the tramway consumption, because if the dealers could get ships in port they could get two or three times the amount of money per ton that they could sell coal for to tramways.

**The Chairman** remarked that the conference was going to discuss the Coal Restriction Order later on when the point could be raised.

**Mr. J. R. D. Cox** (general manager, Edinburgh and District Tramways Company) thought the most serious point of the whole thing was that they had no guarantee that there would not be another demand. In fact, it was practically certain that there would be. The National Transport Workers' Federation represented many unions and very small sections of workers, like the porters, who made demands locally and got them. Was there any guarantee from the Federation that they would not allow their members in isolated unions to make demands, and that they could speak for the whole of their members and the unions they represented, because if that was not established, he was perfectly certain they would have these constant demands for increases until they would not be able to pay their way. His own company had an arrangement with the workers at the beginning of the year, things went forward satisfactorily, and their employees did not make fresh demands or actively associate themselves with this national movement, but naturally they came into the award. He was quite sure that unless they got a guarantee from the Federation that they would represent all these unions, they would be up against this sort of trouble again in a few months' time.

**Councillor R. Mayne** (chairman, Newcastle Corporation Tramway Committee) thought there was a good deal to be said on the subject raised by Mr. Cox. Now that they had come to deal with these matters in a national form, it would be wise for tramway undertakers to be very careful as to awards locally, and they should hesitate to act separately. He believed that an agreement was being discussed with the National Transport Workers' Federation as to whether they would not take up these matters that were raised locally, so that they should not in their separate localities create precedents. Municipal owners had been prejudiced on several occasions by the action of company owners who had given readily what neighbouring concerns could not afford, and they—the municipal owners—had had to give it in consequence. They should be very careful not to prejudice the general position by any action they might take locally. He did not know whether any agreement had been discussed between the National Transport Workers' Federation and the Executive of that Association, but he thought that it was very important that there should be an understanding. These things could not be done both ways. They could not as individual companies or corporations deal with matters, and then have them dealt with nationally as well. It must be one policy or the other, and they must try to work to that end.

**Mr. H. L. White** (manager and engineer, Great Grimsby Tramways Company) desired to point out that company representatives were complaining of the municipal corporation representatives. In the matter of the 12½ per cent., for instance, companies had been very much handicapped by one particular municipal concern in the Midlands. Therefore many of the company representatives felt that, although for some time past they had been endeavouring to co-ordinate action, there was very little chance of its being successful in the long run. Of course it was much to be desired that in the matter of wages there should be unified action, but speaking for himself and many friends of the Association who could not be there, and speaking for those who were connected with the same companies as himself, they had always felt that their action would have been very much better represented if they could have dealt with these matters separately rather than have been influenced in any way by municipal action.

**Mr. A. L. C. Fell** (general manager, London County Council Tramsays) thought that Mr. White was rather unfair. As a matter of fact, the whole of the municipal representatives were let down just as much by the action of that one municipal authority as the companies. It seemed to him that if they would only carry out loyally the action they had taken, that of having a joint conference between the two sections—on the one hand, the conference of the municipalities, and on the other hand the conference of the companies—they could take combined action. He thought that if some of these people had not broken away the thing would have been absolutely on the right footing. He did not know how they were going to protect themselves against that, unless every municipality agreed to go to the municipal conference and every company agreed to go to the tramway conference. If they could get that undertaking, then they had got the idea.

**Mr. White** remarked that it might not have been intentional, but the companies were sold.

**Councillor Mayne** said they did not want the companies to be sold; but the thing happened both ways, and the principle was the same.

**Mr. C. D. Stanley** (engineer and manager, New St. Helens and District Tramways Company) asked if it were not a fact that every member of the Association had been requested not to deal locally with these matters. It did not matter to-day whether the undertaking was a company or a corporation, but what was wanted was compliance with the Association's request.

**The Chairman** said he would deal with the last matter first. Not only their Association, but, from what he had been told, the Municipal Tramways Association also, regarded it as very important that none should make individual bargains on matters which were likely to become national questions. They had to recognise that their municipal friends worked under more difficult conditions than they did, because they had unfortunately many different classes of employees, who sometimes claimed to be treated on the same basis all round. The matter had not been lost sight of, however, and the other day, after the arbitration at the Committee on Production, an interview took place between Mr. Williams, the secretary of the National Transport Workers' Federation, and their representatives on this very point. Mr. Williams undertook to look

Digitized by Google

into every case that they brought to his notice, in which local claims were made which to some extent were antagonistic to a national settlement. So far he must say that Mr. Williams, as secretary of the Federation, had in every case they had submitted to him, in which there was a dispute as to the interpretation of a national award, or matters of that sort, taken action at once with a view to restraining his people and pointing out that they should abide by decisions arrived at between his Federation and those of the employers. He thought this was one of the benefits they got by dealing with some of these questions on a national basis rather than locally. There was no doubt that if matters were dealt with locally, pressure would first be brought to bear on what he might call certain squeezeable people with unfortunate results. It did happen, as a matter of fact, in the case of the 12½ per cent. advance, as they all knew, to the prejudice of the whole industry. A good deal had been done since in the way of organisation on the employers' side, and similar cases should not occur again. He thought that answered Mr. Cox's point. If they would refer any questions to them when they received a local demand which was in any way in conflict with the national settlement, they would take it up with the Federation and deal with it. With regard to the question raised by Mr. Hatton of dealing with wages after the war, that was a very serious matter, and in addressing the Committee on Production the other day, he warned them that this was practically the first case where men did not claim further remuneration on the plea of cost of living. Their argument was that others engaged in similar occupation were getting the 12½ per cent., and therefore they were entitled to it. He pointed out to the committee the danger of going ahead on those lines, and the trouble that was going to arise after the war when they went back to more normal conditions. They were aware of the restriction of railway services, and increased railway fares had no doubt benefitted tramways to a considerable extent, but they would find that after the war there would not only be an agitation in regard to the 50 per cent. increase in fares, but that in time the railway companies would restore their local train services, and though a good many passengers, having tasted the sweets of tramway travelling, would stick to the tramways, yet a good many of them would return to railway travelling, and then they would be faced with a reduced revenue, and the difficulty would then be to get wages adjusted. He did not think they would ever go back to where they were, but a good many undertakings would find it very difficult immediately after the war to make both ends meet.

## NATIONAL INDUSTRIAL COUNCILS.

**Mr. E. H. Edwardes** (general manager and engineer, Lancashire United Tramways), in complying with a request to open the discussion on National Industrial Councils, said that at the conference last year he opened a very similar discussion on standard conditions of labour and rates of pay. At that time there was a discussion and there was a good deal of difference of opinion among members. Since then progress had been made by the adoption of the Whitley Report, which, as they were aware, had received the approval of Parliament and of the Ministry of Labour. There had been a number of papers printed from time to time by the Whitley Committee pointing out the usefulness of National Councils, as set out in the Whitley Report, and making many suggestions as to the best means or the best system of setting up National Councils. The council of their Association started this work almost immediately. He believed they were one of the first industries to start the formation of these National Councils. On account of the complications existing in their industry owing to private and public concerns, the matter had been one of considerable difficulty, as they would appreciate. A sub-committee was formed which met on various occasions both the Municipal Association and the unions, and he was pleased to say that the draft constitution of that proposed council was well in hand, and would, they hoped, shortly be submitted to all the members for their approval. He would read the proposed objects of such National Councils; they were practically taken out of the original Whitley Report, and these items were put forward in the interest of the tramway undertakings. The objects were as follows—

To secure the largest possible measure of joint action between employers and workpeople by the regular consideration of matters affecting the well-being and progress of the industry as part of the national life.

It would be open to the council to take any action that fell within the scope of this general definition. Among its more specific objects would be the following—

(*a*) The establishment of District Councils and works committees.

(*b*) The consideration of measures for securing the inclusion of all employers and workpeople in their respective Associations, and for securing the observance by them of collective agreements.

(*c*) The regular consideration of wages, hours, and working conditions which affect the industry as a whole.

(*d*) The consideration of the existing machinery for the settlement of differences between various parties and sections in the industry, and the establishment of machinery for this purpose where it does not already exist.

(*e*) The consideration of measures for securing regular employment while providing the public with the most efficient service.

(*f*) The improvement of conditions with a view to removing danger to the health of the workpeople and minimising accidents.

(*g*) The consideration of safeguarding the rights of workpeople inventing or designing improvements in machinery and method.

(*h*) The supervision of entry into, and training for, the industry, and co-operation with the educational authorities in arranging education in all its branches for the industry.

(*i*) Inquiries into special problems for the industry, including the comparative study of the organisation and methods of the industry in this and other countries, and, where desirable, the publication of reports.

(*j*) The collection of statistics and information on matters appertaining to the industry.

(*k*) Representation of the needs and opinions of the industry to the Government, Government departments, and other authorities.

(*l*) The consideration of any other matters that may be referred to it by the Government or any Government department.

(*m*) The consideration of problems of reconstruction and labour resettlement after the war in so far as they affect the industry.

(*n*) Co-operation with the joint industrial councils for other industries and other bodies to deal with problems of common interest.

Those were the summarised headings for the proposed National Councils. They would appreciate that they were very far-reaching and of some considerable importance, and the object he had in giving the headings was to invite their views with regard to any points they might think would be of assistance to the committee dealing with the matter. Under the Whitley Report, National Councils are to consist of an equal number of employers on the one side and employees on the other. Of course, in their case the employers would have to be divided under two heads—municipal undertakings and company undertakings—and owing to the fact that the municipal undertakings are considerably larger in number than company undertakings, in all probability the latter would have to have a larger number of municipal representatives. The number had not yet been settled, but no doubt it would have to be in the neighbourhood of 7 to 4. For that reason the sub-committee were of opinion that the companies should have some safeguard when voting on questions which would differently affect the two sections. They proposed to put in a clause that in such cases no point should be carried unless there was a majority of each section of the council on that special point. That proposal had not yet been agreed to, but they welcomed any suggestion that members of that Association might put forward with regard to such protection. That was as far as they had gone at present, but they hoped in the near future to have the whole draft constitution completed, so that copies could be submitted for consideration to each member of the Association.

**Mr. James Devonshire** (chairman of the Tramways (Board of Trade) Committee), said it might be interesting to members to be reminded of what was going on now on somewhat similar lines in connection with the work of the Ministry of Labour. They knew that a large number of advisory committees had been set up by the Ministry of Labour to assist in the training of discharged sailors and soldiers. These men were not all physically fit, but they were coming into the labour market, and their sympathies went out to them. He had the honour to represent the council of that Association at the Ministry of Labour in connection with the employment of disabled sailors and soldiers at electric lighting and power supply works. As Mr. Edwardes had pointed out, there were to be an equal number of employers and employed on industrial councils, and in the case he was speaking of they had the Tramways and Light Railways Association, the Municipal Tramways Association, the I.M.E.A., the Electric Power Companies, the Scotch Electrical Contractors' Association, and the English Electrical Contractors' Association, i.e., five employers' bodies, and opposite to them were five trade unions. When they first started in a small way in connection with substitution switchboard work, the chairman was the nominee of the Ministry of Labour, but as they were now working in a somewhat more ambitious way, the Minister of Labour expressed the hope that these ten bodies would nominate their own chairman. It might be of interest to them if he said with all modesty that the trade unions proposed that he should take the chair, and he had occupied that position ever since, the vice chairman being the general secretary of the E.T.U., Mr. Rowan. They might be glad to know that the committee was now called the National Advisory Committee for the whole of Great Britain and Ireland in connection with the employment of disabled sailors and soldiers for all electrical work other than the manufacture of any electrical material. He thought that this kind of work, now being carried on at the Ministry of Labour by a number of advisory committees for different trades throughout the country, was a very good omen, and a good model for the industrial councils about to be established. At any rate, so far as his experience was concerned, their relations had been most cordial with the trades union representatives. Of course it was quite true that they had a bond of sympathy, for

Digitized by Google

both parties were most anxious to extend the right hand of friendship to these disabled men, but at the same time it was a good start. He had every reason to think that it was a good foundation for the establishment of the industrial councils. (Applause.)

**Mr. W. Thom** asked what the probable proportion would be for each undertaking as regards men and staff.

**The Chairman** said that Mr. Edwardes had stated the lines on which the work was proceeding. The Ministry of Labour supplied them with a very full memorandum embodying the various terms which had been considered by a number of industries, and it resolved itself into a question of selecting from that memorandum special points likely to be suitable to the conditions of the tramway industry. The proposals were very wide, and they were naturally left as wide as possible, so that the body itself could build up its own constitution, and develop on the lines found most suitable. He had attended several meetings of the committee, and he must say the discussion was carried on in an exceedingly good spirit by both sides. All the troubles were quite openly discussed without minimising difficulties, and the difficulties and troubles of both sides were fully recognised and taken into consideration. There were matters which must from time to time differently affect the two branches of employers, that is to say, the privately owned and the municipally owned undertakings, especially in matters concerning legislation. It was therefore very necessary when matters which differently affected the two sections came up for discussion that provision should be made for a majority vote by the two branches of the employers on the employers' side. That matter was now under discussion between the two associations, and he had good hope that some settlement which would be acceptable to both sides would be arrived at.

**Mr. H. L. White** said he would like to ask what opportunity individual members of the Association would have of expressing an opinion upon the report before it was actually adopted, because they had only heard the outlines from Mr. Edwardes that day.

**The Chairman** said that it was proposed when the draft was finished that it should be submitted to a conference of the employers when every company representative present would be able to express his views.

**Mr. Edwardes,** replying, said that with regard to the point raised by Mr. Thom as to the representation of undertakings, they knew the Whitley Report suggested a National Council, a District Council, and a Shop Committee, and he took it that the constitution of the Shop Committee would have equal representation of the unions and equal representation of the staff. The Minister of Labour would prefer that the National Council be appointed first, then the District Councils, and finally the Shop Committees.

## INCREASED FARES.

**Mr. A. L. Barber** (secretary, Metropolitan Electric Tramways, Limited) said he had been asked to summarise the events which led up to the promotion of the Statutory Undertakings (Temporary Increase of Charges) Bill, which was before Parliament, and this gave him an opportunity of paying a tribute to the untiring efforts made by the council during the past twenty months to secure for the tramway industry some relief from its ever-increasing burdens. But for the perseverance of the council in keeping this question continually before the Board of Trade, it was very doubtful whether they would now be in a position to criticise a Bill which had been introduced with the object, amongst others, of enabling tramway undertakings to pay their way in these difficult times.

The history of the efforts of the Association were set out clearly in the Association's Journal for April last, and it was therefore only necessary for him to refer briefly to the various steps taken. After some correspondence with the Board of Trade dating from November, 1916, and August, 1917, a deputation was received by the President in November, 1917, when the announcement was made that a committee would be appointed to deal with tramway matters. This committee was shortly afterwards set up as the Tramways (Board of Trade) Committee. It was hoped that the appointment of this committee would lead to some steps being speedily taken to assist those tramway undertakings which were financially hit by the war, and this hope was encouraged by the fact that, according to the explanatory list of functions of the committee, as published in the Board of Trade Journal of January 3, 1918, they were to consider such applications for the revision of fares as might be referred to them by the Board of Trade, and to make recommendations as to the action to be taken. Further correspondence followed, and the position became aggravated by the granting of awards by the Committee on Production giving to the men increased war bonuses.

In April the President received another deputation from the two associations, and schedules showing the financial position of a number of companies were sent to the Board of Trade. The President announced to the deputation that he proposed to ask Parliament to appoint a Select Committee to deal with the question of increased fares. Many were inclined to be disappointed, as this implied further delay in dealing with an urgent question, but it was felt that the President had no alternative, as he had promised Parliament that the question should not be dealt with without it being first consulted.

On April 24 a Select Committee was duly appointed by the House of Commons, the terms of reference to that Committee being as already published in the journal for May. Evidence on behalf of the two associations was given on May 8 by Mr. C. J. Spencer, for the Municipal Tramways Association, and by Mr. Howley, their vice-chairman, who most ably put the case for the companies. That the Committee were greatly impressed by the evidence put before them is proved by the recommendations contained in their report.

Those recommendations are of a wide and general character, and appear to call for legislative action confined solely to the industry, on the condition of which the Select Committee were asked to report. About the same time as the Tramways Select Committee was taking evidence, another Select Committee was sitting dealing with the financial hardships of gas undertakings. The reports of the two committees were isued about the same time, and the Board of Trade appear to have at once decided to deal with the recommendations of the two committees in one Bill rather than have a separate Bill for each.

The decision of the Board of Trade to deal with the matter in this way was another disappointment. There were many distinctions between tramway undertakings and gas and water undertakings, and, moreover, it was to be feared that by being mixed up with these other industries they might meet with further delay in securing for the tramway industry the relief of which it was in such urgent need. This was the view taken by the Association, and on July 8 they addressed a further letter to the Board of Trade, expressing their disappointment that the Government had included in one Bill gas, water, electricity, and tramway undertakings.

Coming now to the Bill itself, he proposed to summarise its provisions so far as they related to tramways. Clause 1 provided that where it appeared to the Board of Trade that the financial position of any tramway undertaking had been adversely affected by the war, they might, if they thought fit, provide for the modification of any statutory provisions regulating the charges to be made by the undertakers and of any statutory provisions consequential on, or supplemental to, any such provisions as aforesaid.

Then came a provision which was perhaps the most important part of the Bill. This proviso was as follows :—(*a*) In the case of a municipal tramway undertaking, no modification might be authorised which would increase the statutory maximum charge by more than 50 per cent., or which is more than sufficient to enable the undertaking to be carried on without loss. (*b*) In the case of a company-owned tramway undertaking, no modification was to be authorised which was more than sufficient to enable a dividend on the ordinary stock or shares of the undertaking to be paid at half the average rate of dividend paid for the three financial years immediately preceding the war.

All of them would agree that if this proviso stood without amendment, publicly-owned undertakings would receive better treatment under the Bill than companies. In the case of the former they would secure their interest and sinking fund on the capital expended on the undertaking, whereas, in the case of companies, those which in the pre-war period paid a dividend on their ordinary stock or shares must suffer the loss of one-half such dividend before they could obtain relief.

Clause 1 further provided that any application from a tramway undertaking to the Board of Trade was to be accompanied by such information, certified in such manner as the Board of Trade might require, with respect to the financial position of the undertaking in question. Sub-section 4 of Clause 1 stated, inter alia, that statutory provisions include the provisions of any Order having the force of an Act. In regard to this point, the power of many companies to charge the ordinary Parliamentary fare of 1d. a mile was subject to restrictions imposed at the instance of local authorities. Where these restrictions were in the form of a clause in an Act or Order, the Board of Trade would apparently have power to override them, but there was nothing in the Bill to empower the Board of Trade to modify any restrictions which were not to be found in the statutes of the undertaking, but were merely embodied in agreements between the undertakers and local authorities or other parties. Clause 2 of the Bill dealt with the application of its provisions to Scotland and Ireland. Clause 3 gave the short title of the Bill, and fixed the period during which it was to have effect; for the period of the war and two years after. In this latter respect the Bill followed exactly the recommendation of the Select Committee. So much for the substance of the Bill as deposited.

As soon as the Bill was published, the Council of the Association gave it careful consideration, and made arrangements for two amendments to be proposed in the House. The first amendment referred solely to company-owned undertakings, and its effect was to suggest that the Board of Trade should have power to modify the fares and charges to such an extent as would enable companies to earn 5 per cent. upon the capital properly expended on undertakings. This would practically put companies on the same footing as municipal undertakings.

*** The full text of the Bill as passed is given on page 103.

Digitized by Google

It would be observed that the amendment suggested 5 per cent. on the capital properly expended, and not on the debenture and share capital issued. It was felt that to ask for recognition of the capital issued would arouse considerable opposition, as few of the companies could deny that there was a considerable amount of water in their capital. The second amendment asked for was the insertion of a proviso that any modification of fares so authorised should not be less than one halfpenny. On some of the smaller undertakings, where the number of important traffic points was comparatively few, any increase of fare by way of a further adjustment of the fare stages may be impossible, or rather may not result in any increase of revenue. To meet this point it was thought desirable to ask Parliament to agree to the second amendment.

There were just one or two other remarks he wished to make. Even if the Bill passed with their amendments incorporated, their troubles would not be quite at an end. Each undertaking would have to make application to the Board of Trade for its own particular case to be considered, and would have to furnish such information as the department might require. There was one other important point. As he understood the Bill, those applications would be considered by the permanent officials of the department, and would not, as some of them once hoped, be referred to the Tramways (Board of Trade) Committee, the members of which were all tramway men, well acquainted with the practical problems of tramway operation and management, and with the many difficulties which beset them in these days of war.

**Mr. C. D. Stanley** observed that as regards the Bill, it seemed to him that the clause to which Mr. Barber had drawn special attention knocked the bottom out of the whole thing. The essence of the business was that there should not be interminable delay, and if the restrictions were imposed by the clause questions would arise, not only as to what capital had been properly expended but a host of other questions, such as what sum was properly set aside for depreciation, what had been or could be properly done in the matter of deferred repairs, and so forth. In fact there would be dozens of questions like that, and it seemed to him that by the time all these questions had been thrashed out it would be a year or eighteen months before they got any relief. Therefore he did not see how they could hope for very much relief as long as that was operative. He did not know whether it was possible to get that removed or modified, and to have it simply left on the recommendation to give them an amount, such as the 50 per cent. suggested. He joined with Mr. Barber in hoping that any case that was submitted to the Board of Trade might be turned over to the Tramways (Board of Trade) Committee. On that Committee they had men with a practical knowledge of tramways, and practical common sense, and they would realise the necessity for dealing with these things quickly. He thought that was a very important point.

**Mr. E. H. Edwardes** asked the chairman if he could inform the meeting whether the Bill had been submitted to the Advisory Committee of the Board of Trade, or did that Committee know anything about it. It seemed to be rather peculiar that this Committee, specially appointed by the Board of Trade to consider matters appertaining to tramways, should not have been consulted. Were these clauses considered by them, or submitted by them, or did they know nothing about them ?

**The Chairman** replied that all he could say was that the Committee were not responsible for the Bill.

**Mr. E. Hatton** said they had heard a very interesting broad statement from Mr. Barber as to the treatment of Corporations and companies in regard to interest and redemption. Companies were to have capital guarantees to them of fares which would yield the interest of previous years. But what about those municipal undertakings which had been returning money to the relief of rates ? Would that go by the board ?

**Mr. H. L. White.**—They ought never to have paid it.

**Mr. Hatton** rejoined that that was not the point. Mr. Barber was now asking the Government to guarantee a 5 per cent. return on their stock. Very well, if they were going to do that when railway control formed a gilt-edged security, it would put them in a very different position from what they were in to-day. He said the bulk of it was paid-up capital, and he believed that was so. But the first thing to do was to make all companies and Corporations make returns of their working expenses in exactly the same form, so that one could be compared with the other, capital and working expenses, and then they would be able to obtain a better understanding of things as they stood. It seemed to him that when the war broke out everybody thought they were going on the rocks, but some of them had done better, and some had done worse, and now it seemed to him that the trouble of the companies was that in some cases where other people had made war profits—he was not speaking of tramways alone, but of other industries as well—they were now prohibited from making those war profits. Well, it was very clear to anyone who looked at the matter from the amendment, while the Government permitted a private company to make war profits, they would not allow other undertakings transporting the public to do the same thing. That was the basis of the matter, and if the companies were guaranteed fares which would give them pre-war dividends—for two years after the war—obviously there would seem to be a preferential treatment.

**Mr. H. L. White** thought the remarks of Mr. Hatton from the municipal side were most interesting to those who, like himself, represented company concerns. He thought some of those remarks, from the point of view of producing harmony between the two sections of tramway industry of municipal and company, might very well have been dropped. For instance, Mr. Barber was quite justified in saying that the companies would be more heavily hit by this proposed legislation than the municipal concerns. Mr. Hatton had referred to those undertakings which had been so prosperous that they had been able to make payments to the benefit of the rates, and he probably wanted to know whether Parliament was going to continue by some means to enable those undertakings to pay those amounts to the rates. So far as the companies were concerned, what they said was this—that they were entitled to the same dividends that they received before the war. He did not think any of them would ask to be allowed to receive more, but for the Board of Trade in their Bill to cut them down to one-half of what they were earning before the war did seem to them very hard, and he only hoped that those members of the council who represented companies would be able to induce those members who were on the municipal side on the council to share that opinion, because otherwise it seemed to him that the interest of the purely company undertaking was going to be sacrificed.

**Mr. A. V. Mason** (general manager and engineer, South Metropolitan Electric Tramways and Lighting Company) said that he did not see what good the Bill would be to anyone unless the companies were allowed to increase their rates so that the full pre-war dividend could be paid, or fixed at not less than 5 per cent. If not, the public were going to suffer, as no company could afford to worry about the Bill as it stood because it was much too lean, and in order to maintain dividends the services and miles would have to be cut and further overcrowding enforced so as to earn higher pence per car-mile, and the repairs starved. Workmen's services would also have to be reduced to a minimum. Workmen's fares were quite inadequate, and must improve, or the renewal fund would suffer. To-day, speaking quite managerially, every extra cent earned due to inflated traffic ought to be put back because the repairs were only patched work, especially permanent way, and after all these extra earnings were things of the past with the new award just published, so that all the Bill would do would be to hamper the companies, and give the public a very much worse service. The latter should not be forgotten.

**Mr. A. L. Barber** said that Mr. Mason's point only brought him back to what he had said in his opening remarks. If all these obligations were referred to a practical Committee like the Board of Trade Committee it would have no difficulty, he thought, in dealing with those sort of points. It might be that was the intention of the Board of Trade, but there was, of course, nothing in the Bill to say what the procedure would be. With regard to Mr. Stanley's point, the history of this matter had been a story of delay, and it looked as if they were not through with the delays yet, but they were a little bit nearer than when they first started twenty months ago.

**The President of the Association** (the Right Hon. Viscount Chilston) arrived at this stage and took the chair.

## COAL RESTRICTION ORDER.

**Mr. W. E. Hardy** (manager and electrical engineer, Bath Electric Tramways Company), in opening the discussion on the Coal Restriction Order, said it struck him that of all industrial consumers of electric power, tramways up to the present time had been singled out in the call made upon them for economy in coal. Perhaps it was that tramways were easily accessible by Government departments. While this might be advantageous to tramways in many instances, he could not help thinking that in the case of the Coal Restriction Order it had operated in an adverse direction. With the advent of the new Order for rationing coal for householders, the question of the 15 per cent. reduction of consumption of electricity by ordinary consumers was in reality wiped out, and even the favoured North came into this scheme, so that he would not be surprised to learn that considerable modifications might be made in the Coal Restriction Order as applied to tramways. In the instructions sent out to tramways by the Tramways (Board of Trade) Committee on April 20 last, which affected all tramways in the southern part of England, these tramways were required to reduce their coal consumption by 15 per cent. In the case of those tramways which purchase electrical energy, this was interpreted, and he believed rightly so, as reducing the number of units used by 15 per cent., but in the case of tramways which supply their own power it meant a 15 per cent. reduction in their coal consumption. Now a 15 per cent. reduction in coal consumption meant considerably more than a 15 per cent. reduction in service, because the standing losses in a power-station would be practically unaffected. Therefore the tramways with their own power-station were harder hit by the Order than those who purchased their current. On the other hand, as a set-off against this, " the partial substitution of coke, locally produced, for the coal at present consumed " which was allowed, was certainly some compensation to tramways which had their own power-stations.

Digitized by Google

He proposed just to say a few words about the burning of coke, or rather coke breeze; he said "or rather coke breeze" because as the new rationing order permits of 3 tons of coke being taken in place of 2 tons of coal, and as it was a fact that in domestic grates the radiant heat of coke was considerably in excess of the radiant heat of coal, it was far more economical from every point of view for people to burn coke in open grates in preference to coal. For this reason he did not think there would be a great deal of coke, i.e., screened coke, available. On the other hand, coke breeze had been more or less difficult to dispose of, and stocks had been accumulating at many gas works in the country. If, therefore, coke breeze could be used in tramways power-stations, it would go far to minimise the drastic curtailment of the car services which was at present entailed. Tramway services all over the country had been very much reduced since the outbreak of the war, and it could not be in the public interest to call for a much greater curtailment. The successful burning of coke breeze had been, and was being, carried out on mechanical stokers assisted with forced draught, and also on hand-fired furnaces with steam blowers. Personally, he did not advocate the use of steam blowers where they could be avoided, and any alteration involving new plant was a difficult matter in these times. If, however, one was prepared to reduce the output per boiler, and make up by putting an additional boiler or boilers under steam, coke breeze could in most cases be burnt successfully on the existing furnaces either by itself or mixing with coal. Where a boiler plant was working at its full capacity, of course, the necessary margin was not available, but even in these cases there were times when the load was not so heavy, and it would often be found that a proportion of coke breeze could be burnt. The intensity of draught had a very important bearing upon the successful burning of coke breeze, but at most electric power-stations the draught is good. In his own case he had been able to reduce the coal consumption by about 50 per cent. by burning coke breeze. He burnt it on a hand-fired furnace and on chain grate stokers with Babcock boilers. On the hand-fired furnace, burning coke breeze by itself, and with four-tenths of an inch draught at the boiler damper, he had found it to be possible to burn 13 lb. of coke breeze per sq. ft. of grate area per hour, which gave considerably more than half the normal output of the boiler. On the chain grate stoker fitted with a refractory arch, it was possible to obtain good ignition, burning one of coal and three of coke breeze by bulk. The chain grate stoker with an ordinary setting, one to one by bulk proved to be quite satisfactory. Of course there were disadvantages in burning coke breeze—additional clinker had to be dealt with, more labour was required, the boilers had to be sooted more often from what he might call sparklets which come from the coke, and more attention generally was required; but on the other hand, the price of coke breeze as compared with coal should more than compensate for this. The advocates of burning coke, by this he meant gas companies, claimed that a better boiler efficiency could be obtained with coke under ordinary conditions than with coal, owing to the risk of waste with coal by not properly consuming the hydrocarbon gases, and there was a good deal to be said from their point of view, although up to the present time he had not proved it himself. He thought it might be accepted as a general proposition that the lower the grade of fuel the more difficult it becomes to maintain a high boiler efficiency. On hand-fired boilers care should be taken to avoid as far as possible the blue flame at the top of the fire. This blue flame indicated incomplete combustion, which might be due to too thick a fire or clinker on the bars. The first trials of coke breeze would probably not be satisfactory; firemen were against it, and very often put every obstacle in the way, but by a little persistency, and by starting in easy stages, it would be generally found that it would be possible to increase the percentage of coke breeze burnt in a very short space of time. He hoped the discussion would elicit the views of those who have combined stations in the matter of burning coke breeze.

**Mr. J. R. P. Cox** referred to experiments which he had carried out, and said the question was whether there would be enough coke breeze to go round. Other people had gone into the matter and found it very cheap. But there was a considerable quantity of low-grade fuel still available. He could get it in large quantities, and it was certainly more suitable to use mixed than coke breeze. If they could get a low-grade fuel he certainly thought it was better under ordinary conditions than coke breeze, and those low-grades were available. Having been appointed the local representative of the Coal Controller in Edinburgh, he was in a position to know something about it in many places.

**Mr. Howley** asked if there was any difficulty in getting coke to light back on a chain grate.

**Mr. Cox.**—Not with a draught, especially a natural draught.

**Mr. Edwardes** asked Mr. Hardy if he had tried to burn coke breeze in an underfeed stoker. He had got hold of some coke breeze a few months ago—there was only a limited quantity in Lancashire—and he had been quite unable to burn it in an underfeed stoker.

**Mr. Jewell** said his company had tried coke breeze, had burnt 40 tons a week and used forced draughts and steam jets. Slack was used in the proportion of about three to one.

**Mr. H. L. White** said at his generating station they burnt coke breeze in 1913 and 1914, and found a very considerable economy as compared with coal, but last year they found it was the other way about. The quality of the coke made all the world of difference, and they found they were consuming more in cash in using breeze than they were paying for coal, because their coal was obtained very cheaply. It might interest them to know in 1913 coke breeze was got as cheaply as 2s. 6d. a ton, a very good quality; and now they had to pay 7s. from the local gas company. So they had gone back to the old condition of things, and preferred coal. They used forced draught boilers and steam, and they could burn any rubbish practically in their Lancashire boilers by that means. But still beggars could not be choosers, and if they could not get coal they must get breeze.

**Mr. A. L. C. Fell** remarked that on that occasion he felt very much like Dr. Jekyll and Mr. Hyde. On the one hand, like Dr. Jekyll, because he represented the Tramways (Board of Trade) Committee, and like Mr. Hyde because he was a miserable person who had to burn coke. He did not like to say too much about the work that was being done by the Board of Trade Tramways Committee. All he could say on that head was that he knew there was a further communication going out which would be applicable to all tramway undertakings in the country with regard to economy in fuel and the possibilities of burning coke. In his other personality, he could say they were at present burning coke at the Greenwich generating station. They were saving over 16 per cent. of coal at the present time. They were burning coke in two ways; one way was burning coke on underfeed stokers, and in the other way they were burning it on the ordinary chain grate stokers with Stirling boilers, and in that case the coke and coal were being fed in layers. They had two shoots down from the hopper overhead, so that they fed the coal and coke at the same time, and they got a layer of coke underneath the coal, and they got very good results. He thought they were getting as high an economy as they were from ordinary coal, but one of the greatest difficulties at the moment was with the underfeed stokers. The heat was so great in the furnaces that they had the greatest difficulty in keeping up the arches, and they had to be renewed very frequently. They hoped shortly to have the full results of the trials which were being made with those stokers which had been fitted up at the generating station, and he had no doubt they would be laid before the Association for consideration by the members.

**Mr. A. V. Mason** said that some experience he had with coke at a small lighting station in a town in the suburbs, viz., Sutton, might be of interest. Coke breeze was used quite successfully there in the proportion of two coal slack and one coke. They had no trouble with combustion, and obtained a good evaporation as long as the mixture was well mixed, in fact, turned over like concrete. They used it for quite a long time in pre-war days before they shut down in favour of bulk supply. They really gave it up because the quality decreased and the price increased, and the coke grit wore out the sliding bars of the coke stokers; also the wet steam forced draught was carried through to the economiser pipes, or it might have been the low flue temperature mentioned by another speaker which caused the tubes to sweat and get heavily caked. The worst trouble was that the extra draught necessary caused a lot of the fine grit to be carried up the chimney, and as the station was situated among good class residences they had a lot of complaints (those troubles were merely incidental), but the experiment was made not with a view to save coal in those days, nor was it due to any coal restriction order, but merely as a matter of £ s. d. As long as the mixture was good they had no trouble in getting reasonable duty out of their boilers.

**Mr. Hardy** asked if sprinklers were used.

**Mr. Mason.**—No.

**The President** pointed out the subject before the conference was the Coal Restriction Order. Some members had views on the application of the Order, and the members would be glad to hear them.

**Mr. H. England** said they were chiefly concerned with economy in the use of coal. In the North there had been no compulsion yet as to any reduction. There was a forecast of something like 15 per cent. reduction. They were concerned that a clean cut should not be made, for the reason that some undertakings had by reason of the shortage of labour been compelled to cut down their services. Therefore their consumption of coal was on practically bed rock. That was in consequence of the letters issued by the Tramways (Board of Trade) Committee in March last, advising economy in the use of renewals and spare parts, and so they had voluntarily cut down the services. Those undertakings were now running practically the minimum mileage that could be run if the undertaking were to give an efficient service, while other undertakings better placed were running the same services which they did two or three years ago. They therefore thought that it would be a wrong thing for any department to call upon every undertaking to reduce its consumption by 15 per cent. They thought that there ought to be some means of ascertaining the circumstances of each particular undertaking. Some return ought to be made showing what, if any, reduction should be made on some proper basis. It was obviously

Digitized by Google

unfair that an undertaking maintaining its pre-war mileage should only be penalised in the same way as those undertakings which were only running 50 per cent. of their pre-war mileage, and so they did protest that any clean cut should be made, and urged that no order should be issued calling upon every undertaking to reduce its coal consumption by a certain amount.

**Mr. Stanley** asked what exactly the 15 per cent. reduction was to take place upon. Was it the actual present consumption?

**Mr. Hardy,** in reply, said he was afraid he could not answer the question about the 15 per cent. reduction. Perhaps Mr. Fell, who had just announced some new regulation was to be issued, could say, but so far as the letter of April 20 last was concerned with regard to tramways in the southern districts, it certainly meant that there was to be a 15 per cent. reduction on present or then existing consumption. His remarks in regard to coke were due to the fact that tramways had cut down their services to such a degree that coke breeze fuel could be substituted to maintain those services as they are at present, that it would be a great help to the undertakings, and that was the one good point about the latter which allowed of the burning of coke breeze. With regard to Mr. Cox's advocacy of a low grade fuel, of course that was coal, and the 15 per cent., of course, came off that. Coke breeze was not fuel, although it might be in the future regarded as fuel. Mr. Edwardes asked about the burning of coke breeze with underfeed stokers. He had seen a case recently where coke breeze had been burnt successfully for several years past, and was still being burnt. Mr. Jewell referred to steam jets, and seemed to agree that steam jets were an abomination, and he (the speaker) was not surprised that he did not get good results, and said he was burning three times as much coal as coke. Probably it was due to the steam jets that they got a large percentage of c.o. up the chimney. Mr. Fell referred to the fact that he had a saving of 16 per cent. by coke at the Greenwich generating station. The method he described of burning coke breeze with a layer of coal on top had been found to be far more satisfactory up to the present. He understood, however, that it was burnt with good grade fuel, and that helped it very greatly. With regard to the underfeed stokers Mr. Fell mentioned, he took that what was meant was underfeed coke grate stokers.

**The President** then closed the conference by proposing a hearty vote of thanks to Mr. Howley, Mr. Edwardes, Mr. Barber, and Mr. Hardy for opening the discussions. He expressed regret that he had been unable to have the privilege of hearing the whole proceedings, but he had been engaged at another meeting.

The motion was agreed to with acclamation, and the proceedings terminated.

## THE ASSOCIATION DINNER.

Following the Congress, the annual dinner took place in the evening at the Trocadero Restaurant.

The President (the Rt. Hon. Viscount Chilston) occupied the chair, and the following members and guests were present:—

R. A. Abbott.
G. H. Anger.
C. G. Ashdown.
S. E. Baker.
Geo. Balfour.
A. Balfour.
E. S. Barralet.
H. R. Beken.
W. W. Beaumont.
E. Benedict.
H. E. Blain.
F. Bland.
A. H. Beatty.
C. Bickersteth.
F. Bourne.
J. K. Bruce.
J. Browning.
C. Burnet.
C. L. Buckley.
S. W. Callow.
J. M. Cayter.
Viscount Chilston.
Col. A. W. Chambers.
E. Collins.
H. P. Conibear.
F. Coates.
F. Coutts.
G. F. Craven.
W. D. Dawes.

W. W. Wakley.
A. M. Willcox.
H. L. White.
A. G. Whyte.
J. Welling.
P. R. Wray.
W. Wyld.

As has been usual in war time, there was no music, toast list, or official speeches.

The usual loyal toast was duly honoured.

During the after-dinner conversation the **President** said they might be glad to hear that a higher authority than himself had decreed that there should be "no speeches," but he really could not let them separate without expressing to them a warm welcome to the annual dinner. He fully realised the difficulties of travel, for they had fewer trains and an addition of 50 per cent. on fares, and a few other things of that sort; but he was glad to see them present in such numbers to show their interest in the Association. While he was glad to see them present he could only regret that his friend and colleague, the Hon. Sir Arthur Stanley, chairman of the council, could not be with them, as he had been suddenly smitten with Spanish "flu." Than Sir Arthur he knew of no man in London with greater power of making happy after-dinner speeches, and they probably all looked forward to seeing him at their festive board. He was also sorry because, owing to the fell disease having seized Sir Arthur, it had upset their mutual plans, so that he (the president) had had to undertake other duties, and so absent himself from part of the afternoon's Congress. Last year it was his pleasure to take the chair at the Congress, and he had hoped that this year he might have been able to join in their discussions. Without wishing unduly to "talk shop," he had noted that at the Congress they had discussed four important subjects. Nowadays everything seemed to tend towards formal control, and he would like to express (perhaps it was a rather old-fashioned idea) his hope that when the war was over they would all be able again to think of independent enterprise. (Hear, hear.) They must guard against being entirely content with "controlled" this and that, and so allow independent enterprise to be entirely squashed. (Hear, hear.) They were meeting in an anxious time in regard to the war, and he would be a bold man who would venture to say when the war would conclude. However, that day was France's day, and they would like to bear in mind the faithful ally with which they were associated. They had had four years of war, and he would like to say again (it had become a homely saying) that they were not going to drop the war until Britain and the Allies came out top dog and until the Allies could control the peace terms. (Applause.) Though the war was still with them they remained as full of hope and confidence and determination to come out on top as they were four years ago. Still he recognised the difficulties of carrying on; and those difficulties were being accentuated. There was the increased cost of coal—(hear, hear)—the increasing difficulties in regard to labour. More men were required at the front each year, and they must be drawn from some of the industries, and many of them had been withdrawn from their own industry. Whether or not the other sex could fill the space was a question on which they would be better able to speak than he could himself. But at any rate he thought the girls working on the cars had done extremely good work, though perhaps it would not be well to trust some of them to take a heavy load downhill. Nor could the girls be recognised as just as fully capable as the male sex. However, the women had done their duty extremely well, and had helped the tramways extensively, for which they all felt grateful. Referring again to the Congress, the President regretted he was not present when they discussed the division of rates. He did not think they had been fairly treated in that matter. Tramways ought not to be coupled with other industries that could not make out so good a case as tramways could—they would be wise to fight that to the end. He trusted that for many future years they would assemble at their annual dinners, and that when the war was over, and when victory had been satisfactorily won (nothing less than that being possible), they would be able to foregather in greater force (although the present gathering was not at all a bad muster) and with greater interest to themselves and with greater benefits to the Association. It had been suggested to him that they should allow a collection to be made round the table for the French Red Cross Fund.

This was done, and a sum of £20 was collected.

**Mr. R. J. Howley** (vice-chairman of council) proposed the health of their president, Viscount Chilston. He expressed the pleasure of the council at seeing so many members present at the dinner, which proved that the Association was not only carrying on but was really "alive." He hoped the council would be able to give more time after the war to the difficulties besetting the tramway industry, and produce gratifying results for the members.

**Mr. Harry England** seconded the toast, and added his tribute of esteem for the president and his pleasure to see him present. At the same time he regretted the absence of the chairman of council, and the cause of that absence. At the Congress a gentleman asked him if the chairman of council was elected every year, and he (Mr. England) replied that that would be absurd, because without their chairman there would be no Association, and he could say almost the same thing about their president.

The **President,** in response, thanked them cordially for the handsome tribute paid to him and to his efforts in the chair. He felt it a great privilege to be president of the Association, and he again expressed regret for the absence of Sir Arthur Stanley. He then spoke of the work of the French Red Cross and of Sir Arthur Stanley and our own Red Cross work.

The health of the secretary (Mr. A. de Turckheim) was then proposed by **Mr. H. E. Blain,** and very cordially received by the company.

## AN ACT TO INCREASE STATUTORY CHARGES.

### Three-quarters of the Pre-war Rate of Dividend Guaranteed.

The following is the text of the Statutory Undertakings (Temporary Increase of Charges) Bill which, as amended, was read the third time and passed by the House of Commons on July 24 and by the House of Lords on August 2. It received the Royal Assent on August 8. The Bill enables the statutory provisions affecting the charges which may be made in respect of certain undertakings, including tramways, to be modified during the continuance of the present war, and for two years thereafter. The amendments made in the Bill after it was introduced by Sir Alfred Stanley, President of the Board of Trade, are indicated by italics.

1. (i.) Where it appears to the appropriate Government department that the financial position of any undertaking to which this Act applies has been adversely affected by circumstances arising out of the present war, the Department may, if they think fit, by order provide for the modification of any statutory provisions regulating the charges to be made by the undertakers, and of any statutory provisions consequential on or supplemental to any such provisions as aforesaid, for such period during the continuance of this Act, in such manner, and subject to such conditions, as appear to the Department to be just and reasonable :

Provided that—

(*a*) Where the undertakers are a local authority no modification shall be authorised which will increase the statutory maximum charge by more than 50 per cent., or which is more than sufficient so far as can be estimated to enable the undertaking to be carried on without loss ; and

(*b*) In any other case no modification shall be authorised which is more than sufficient to enable *with due care and management* a dividend on the ordinary stock or shares of the undertaking to be paid at *three-quarters* the standard or maximum rate of dividend, if any, prescribed for the undertaking, or at *three-quarters* the pre-war rate of dividend, whichever is lower.

(ii.) An application to a department for the purposes of this Act shall be accompanied by such information, certified in such manner as the department may require with respect to the financial position of the undertaking in question, *and before making an order the appropriate Government department shall require the undertakers to give public notice of the application for an order under this Act and as to the manner in which and time within which representations may be made, and to give a similar notice in writing to the council of each county, borough, or urban, or rural district within which any part of the undertaking or limits of supply of the undertaking is situate, and the department shall consider any representations which may be duly made.*

(iii.) The undertakings to which this Act applies are tramway undertakings, including light railways constructed wholly or mainly on public roads, and undertakings for the supply of gas, water, *hydraulic power* and electricity, *and in calculating the maximum charge which may be authorised under this Act in respect of such tramway undertakings fractions of a halfpenny shall be calculated as a halfpenny.*

(iv.) For the purposes of this Act—

The expression "statutory provisions" includes the provisions of any order having the force of an Act ;

The expression "appropriate Government department" means, in relation to gas and water undertakings carried on by local authorities, the Local Government Board, and in relation to other undertakings the Board of Trade ;

The expression "local authority" includes any commissioners, trustees, or other public body of persons carrying on, otherwise than for purposes of private profit, any undertaking to which this Act applies ;

The expression "pre-war rate of dividend" means the average rate of dividend for the three financial years immediately preceding the war.

2. In the application of this Act to Scotland the Secretary for Scotland, and in the application of this Act to Ireland the Local Government Board for Ireland, shall be substituted for the Local Government Board.

3. (i.) This Act may be cited as the Statutory Undertakings (Temporary Increase of Charges) Act, 1918.

(ii.) This Act shall have effect during the continuance of the present war and for a period of two years thereafter, and no longer.

**Wages Increases.**—The Committee on Production have issued an award to men in the engineering, shipbuilding, and allied trades, and in the ship repairing department in the Liverpool district, of 3s. 6d. per week to men aged 18 and over, and to boys, youths, and apprentices under 18 of 1s. 9d. By previous awards the men have received advances over pre-war rates of not less than 20s. a week in the case of time workers, and 13s., plus an increase of not less than 10 per cent., in the case of piece workers. In addition to these advances, grants have been made of a bonus of 12½ per cent. in the case of time workers and 7½ per cent. in the case of piece workers.

## TRAMWAY AND OMNIBUS WORKERS' WAGES.

### Award on Application for 12½ per cent. Bonus.

The applications of the National Transport Workers' Federation and other organisations representing the employees, for the granting to tramway employees of a 12½ per cent. bonus, was heard by the Committee on Production on July 2. The case for the municipal tramways was presented by Mr. J. M. McElroy and Mr. C. J. Spencer, that for the Tramways and Light Railways Association by Mr. R. J. Howley, while Mr. H. E. Blain cogently set forth the case on behalf of the Metropolitan omnibus companies. The proceedings, which were of considerable interest, and indicated that some friction exists between the various representatives of the employees' organisations, occupied the whole of the afternoon, and the Committee reserved its decision.

The award was issued on July 11, and its terms are as follows :—

1.—The parties to this reference are—

(1) The Municipal Tramways Conference and the Tramways and Light Railways Association, the London General Omnibus Company, Limited, the London Omnibus Section of Messrs. Thomas Tilling, Limited, and the National Steam Car Company Limited ; and

(2) The National Transport Workers' Federation.

2.—The claim submitted was as follows :—

(1) Application for an increase of 12½ per cent. upon the present total earnings or for a standard increase equivalent thereto.

(2) For such revision of the award of the Committee on Production of 8th March, 1918, as shall provide for equal payment of women as for men, both as regards war wages and basic rates.

3.—The matter was referred by the Ministry of Labour to the Committee on Production for settlement and representatives of the parties were heard on July 2, 1918.

4.—The award of March 8 provided for certain increases to the employees concerned. The nature of such increases is indicated in paragraphs 4, 5, and 6 of the award, which are as follows :—

(4) The decision of the Committee is that there shall be paid to the men concerned aged 18 and over, and to the grades of women aged 18 and over whose terms of employment include an undertaking that they shall be paid the same rates as the grades of men whose places they have filled, such advance as shall give £1 per week over the pre-war rates of the grades concerned, payment to be made on the basis of a week of six days or six shifts.

(5) In the case of women aged 18 and over not covered by clause 4, the advances now being paid shall be increased by 4s. per week, subject to a maximum of 20s. per week over the pre-war rates of the grades concerned.

(6) In the case of boys and girls and youths under 18 years of age the advances now being paid shall be increased by such amount per week as shall give the girls, boys, and youths under 18 years of age in the undertaking concerned half the additional advances given by this award to the men or women as the case may be in the same undertaking.

The award of the Committee in settlement of the claim now submitted is :—

5.—The war wages advance of 20s. a week at present paid to the able bodied men concerned aged 21 years and over shall be increased to 25s. a week, payment to be made on the basis of a week of six days or six shifts.

6.—This award shall not operate so as to depress the wages at present paid to any of the men concerned.

7.—The advance hereby awarded covers and is to be deemed to be in full settlement of any claim with respect to the bonus of 12½ per cent.

8.—The advance hereby awarded covers and shall not apply to men to whom the bonus of 12½ per cent. has been given under any order made by the Minister of Munitions or any award, or otherwise.

9.—The amount hereby awarded is to be taken into account in the calculation of payment for overtime or night duty or for work on Sundays and holidays ; it is to be regarded as a war advance and is to be recognised as being due to and dependent on the existence of the abnormal conditions now prevailing in consequence of the war.

10.—This award shall not apply to classes of employees, such as building trades' operatives, whose wages have customarily been regulated by the movements in the wages of the trades in which workmen of the same classes are ordinarily employed.

11.—So far as the London General Omnibus Company are concerned, this award is applicable only to those grades of employees with respect to whom there are agreements between the Company and the London and Provincial Union of Licensed Vehicle Workers, but the award does not cover, and is not to be deemed to cover, the grades of employees dealt with in the agreement between the Company and the Union of April 11, 1918.

12.—The advance granted under this award is to be paid as from the beginning of the first full pay following the date of the award.

Digitized by Google

13.—The decision of the Committee with respect to the application for a bonus of 12½ per cent. on the earnings so far as regards women is that the claim has not been established.

14.—It was stated on behalf of the employers at the hearing that they accepted the principle that in cases in which women are doing the same work as men, and doing it efficiently, and provided their employment does not involve increased expenditure compared with the employment of men, they should be paid the same wages as men, They showed, however, that in the case of tramway and motor omnibus undertakings a large number of women employees stay only a comparatively short time, and their attendance is less regular than that of men, necessitating the keeping of a large spare staff, which adds to the cost of employing women. The decision of the Committee with reference to the application that the award of March 8, 1918, should be revised so as to provide equal payment to women and men both as regards war wages and basic rates is that the claim has not been established.

WILLIAM W. MACKENZIE.
JOHN M. DENNY.
JOHN BARKER.
H. J. WILSON, *Secretary*,
5, Old Palace Yard, S.W.1.

July 9, 1918.

## EDINBURGH TRAMWAYS MANAGEMENT.

APPOINTMENT OF MR. R. STUART PILCHER.

Edinburgh Town Council on July 30 unanimously adopted the recommendation of the Tramways Committee appointing Mr. R Stuart Pilcher general manager of the Edinburgh Corporation Tramways.

Mr. Pilcher, who is 36, has been for twelve years manager of the Aberdeen Corporation Tramways, and previous to accepting that appointment he was assistant electrical engineer to Birkenhead Corporation from 1901 to 1904, and traffic manager of the Burton-on-Trent Corporation Tramways from 1904 to 1906. He was trained as an electrical engineer by the Montreal Street Railway Company. Mr. Pilcher was one of the first managers to recognise the advantage of placing energy meters on tramway cars, and to the conference of the Municipal Tramways Association in London in October, 1909, he contributed a paper on "Current Consumption," describing the notable saving that had been effected in Aberdeen by the use of meters, which he characterised as "the most valuable part of our system of check of current consumption."

The Edinburgh Tramways are owned by the Corporation, but have been worked by the Edinburgh and District Tramways Company, Limited. The lease willl expire in June, 1919, and the working will then pass into the hands of the Corporation, who desire Mr. Pilcher to take up his position as soon as possible in order that preparation for the transfer may be undertaken without delay. The tramways are worked by cable traction, and comprise 42·4 miles of track. They were fully described and illustrated in THE TRAMWAY AND RAILWAY WORLD of March 8, 1900. Plans for the conversion of the system to electric traction have already been discussed, and reports have been submitted by Mr. A. H. Campbell, the borough engineer, and Messrs. J. B. Hamilton and Peter Fisher, which were summarised in our issue of December 13, 1917. It is not, however, expected that the conversion of the system can be commenced until peace is restored.

## ABOLITION OF SECOND CLASS ON THE SOUTH WESTERN RAILWAY.

On July 22 the London and South Western Railway Company abolished its second-class bookings. This step has been dictated by war conditions, although the continuous decrease in second-class long distance travel to about 2 per cent. of the traffic foreshadowed the change now determined upon. One of the results of the change will be a saving in coal which will result from the avoidance of hauling partially filled heavy main line stock. Uniformity of accommodation throughout the line will also be secured, thereby avoiding some confusion on the electrified suburban country branches, where trains have only first and third class accommodation. The second-class stock will be converted to third class as soon as possible.

**The British Electrical and Allied Manufacturers' Association.**—We are informed that the following firms have been elected members of this Association :—

Accumulators, Limited (London), Arora Company (Loughborough), Ashdowns (Gravesend), Associated Battery Company, Limited (Penge), J. W. Barnard (London), Bastian Electric Company, Limited (London), Belling and Company (London), Bluemel Brothers, Limited (Wolston), Brompton and Kensington Accessories Company, Limited (London), Cable Accessories Company, Limited (Tipton), Croggon and Company, Limited (London), Curtis Manufacturing Company (London), Electric and Engineering Specialities Company (Liverpool), Fuller Accumulator Company, Limited (Chadwell Heath), Griffiths Brothers and Sons, London, Limited (London), Jackson Electric Stove Company, Limited (London), Jeal and Company, Limited (London), Lithanode Limited (London), Lucas, Joseph, Limited (Birmingham), New Pet o and Radford Accumulator Company, Limited (London), Randall Brothers (London), Richford and Company, Limited (London), Rotax Motor Accessories Company, Limited (London), Rushmores, Limited (London), Sun Electrical Company, Limited (London), Surrey Electrical Company, Limited (London), C. A. Vandervell and Company, Limited (London), F. Wiggins and Sons (London).

## BRADFORD TRAMWAY MANAGER'S RESIGNATION.

MR. C. J. SPENCER ACCEPTS A LONDON APPOINTMENT.

Mr. C. J. Spencer, general manager of the Bradford Corporation Tramways, has resigned that position, which he has held with notable success for the past twenty years, to take up an important executive appointment with the London Underground Railway group. As is well known, this includes the London United Tramways, an undertaking upon which some £400,000 will be expended after the war in the reconstruction of the permanent way, rolling stock, etc.

At a meeting of the Bradford Tramways Committee on July 29, the following letter from Mr. Spencer was read by the chairman, Alderman E. Priestley :—

Dear Mr. Chairman,—I beg to inform you that in consequence of having accepted a position with the London Underground Company, I must, with great regret, tender my resignation to yourself and the Tramways Committee, to take effect as from November 1 this year. I am sure that yourself and the committee will realise that I have not taken this step without the fullest consideration and thought.

I was appointed your tramways general manager in March, 1898, and have therefore been in your service over twenty years. I have seen the system grow from very small beginnings to one of very great magnitude. The first year of operation the receipts for the city tramways were £8,870. Last year the figure was close on £400,000, and it is estimated that the current year will result in revenue of close upon half a million. You will therefore realise that to break away from an organisation which has been my constant thought and care for twenty years is not a step to be lightly taken, and had it not been for the possibility of much wider activities, coupled with a very substantial financial inducement, that step would not have been taken.

May I take this opportunity of thanking you and the committee for your uniform kindness and courtesy through the many years of my office, and especially do I desire to thank you personally as my chairman for fourteen years, and prior to that deputy chairman, and even prior to that a member of the Tramways Committee? We have for all this period had common interests, and whilst at times we have had differences of opinion, they have never interfered with our good personal relations. I sincerely hope that the future of the Bradford tramways department and of the city generally will be everything that its well-wishers could desire. I shall always take a keen interest in your doings, and be pleased with your successes. Yours faithfully,

C. J. SPENCER, General Manager.

The resignation was accepted, and several members of the Tramway Committee expressed their sense of the value of Mr. Spencer's services and their regret that these should now be lost to Bradford. Mr. Spencer, who was born at Halifax in December, 1875, has been manager of the Bradford Tramways since 1898. He served his pupilage with the Blackpool Electric Tramways, one of the pioneers of electric traction, and later accepted an appointment with the South Staffordshire Tramways Company, whose electric tramways were opened in 1892. For over a year Mr. Spencer served with the Admiralty as assistant director (labour division) of the shipyard labour department, and on resigning the appointment owing to the pressure of his duties at Bradford, he received the cordial thanks of the Lords Commissioners of the Admiralty, who expressed to the Lord Mayor of Bradford "their high apprecation of the able and zealous manner" in which he had carried out the responsible work entrusted to him.

Mr. Spencer is widely known in municipal circles as the honorary secretary for many years of the Municipal Tramways Association, of which he was president in 1909-10. He will take up his duties in London on November 1.

## COAL RATIONING FOR INDUSTRIES.

The Controller of Coal Mines is being assisted in the coal economy campaign, which he has instituted to reduce fuel consumption in every way possible, by a technical staff attached to the head office; and arrangements have now been made for a large number of engineers in the country to attach themselves to the Coal Control Department for this special purpose. The arrangement enables the country to be mapped out in districts, so that all industrial consumers will, within a reasonable time, be in touch with the organisation.

The scheme comprises two main sections, namely, (1) electrical undertakings, and (2) industrial undertakings. The work involved includes the careful scrutiny of the quantity and quality of coal consumed by the various undertakings and the efficiency obtained, and the inspection of factories and works by experts to ascertain the best means by which fuel consumption may be reduced. A considerable amount of work has already been done, but it is intended to accelerate the rate of progress as much as circumstances will admit. Some 400 skilled engineers will shortly be at work in various parts of the British Isles. They are giving their services to the Government without delay.

Any public body, or company, or person wishing to effect economies at once, and desiring the Controller's assistance in this direction, is invited to communicate with Coal Control Headquarters, Room 309, Holborn Viaduct Hotel, London, E.C.1, when arrangements will be made to send a technical expert to look into the condition under which coal is being consumed, and to co-operate with the consumer in effecting economy. Apart from special applications of this kind, the Controller's representatives will visit firms in turn in accordance with a general plan of operations.

So imperative is the need to reduce coal consumption to a minimum that a rationing scheme for all industrial undertakings will be introduced shortly.

# FINANCIAL REPORTS AND MEETINGS.

## DIVIDENDS.

LIMA LIGHT, POWER AND TRAMWAYS.—A dividend of 10 per cent. is announced.

HADFIELDS.—An interim dividend of 1s. per share, free of tax, on the ordinary shares is announced.

CLONTARF AND HILL OF HOWTH TRAMROAD COMPANY.—An interim dividend of 3s. per share has been declared.

MATHER AND PLATT.—An interim dividend of 5 per cent., less tax, for the half year ended June last has been announced.

SAN PAULO TRAMWAY LIGHT AND POWER COMPANY, LIMITED.—A dividend of 2½ per cent. on the common stock has been declared.

LONDON GENERAL OMNIBUS COMPANY.—An interim dividend for the half year ended June 30 of 4 per cent., free of tax, on the ordinary shares has been declared.

LONDON ELECTRIC RAILWAY.—Dividends of 2 per cent. on the 4 per cent. preference stock and ¾ per cent. on the ordinary for the half year ended June 30 have been announced.

CENTRAL LONDON RAILWAY.—An interim dividend of 1¾ per cent. on the undivided ordinary shares and 2 per cent. on the preferred ordinary for the six months ended June 30 has been announced.

METROPOLITAN RAILWAY.—A dividend for the half year at the rate of 1 per cent. per annum on the ordinary stock and of 2¾ per cent. on the surplus land stock. The rates are the same as a year ago.

DUBLIN UNITED TRAMWAYS.—A dividend of 4 per cent. per annum, less tax, on ordinary stock for half year (interim), payable August 5, has been announced. Last year the dividend was the same.

METROPOLITAN DISTRICT RAILWAY.—Interim dividends of 2 per cent. on the guaranteed stock, 2½ per cent. on the first preference and 1½ per cent. on the 5 per cent. second preference have been announced.

CITY AND SOUTH LONDON RAILWAY.—Interim dividends on the 5 per cent. preference stocks 1891, 1896, 1901 and 1903, of 2½ per cent. and on the consolidated ordinary stocks of ¾ per cent. have been declared.

STEWART AND LLOYDS.—An interim dividend for the half year ended June 30 last has been declared at the rate of 6 per cent. per annum on the preference shares and of 10 per cent. per annum on the preferred ordinary shares.

LIVERPOOL OVERHEAD RAILWAY COMPANY.—An interim dividend for the half year ended June 30 is announced at the rate of 5 per cent. per annum on the preference shares and 2½ per cent. on the ordinary shares. A year ago the rates were the same.

GLOUCESTER RAILWAY CARRIAGE AND WAGON COMPANY.—A dividend at the rate of 10 per cent. for the half year to May 31, making 10 per cent. for the year less income tax, and also a bonus of 5 per cent., free of income tax, have been announced.

UNDERGROUND ELECTRIC RAILWAYS.—Interest on the 6 per cent. first cumulative income debenture stock, payable August 31, less tax, at 3 per cent., and coupon No. 21 off the 6 per cent. income bonds, payable free of tax at 2 per cent. September 2, has been announced.

---

**Walsall Corporation Tramways.**—The net profit for the year ended May 25 amounted to £16,316, including the profits on the motor omnibuses.

**Brown Bayley's Steel Works.**—The directors recommend that a new Company be registered, with a capital of £800,000, divided into £300,000 ordinary shares and £500,000 preference shares, and that the shareholders in the old company be allotted four £5 ordinary shares for each old £10 share and two £5 ordinary shares for each old £5 share. The directors also propose to offer £300,000 5 per cent. cumulative preference shares to present proprietors and their friends for cash, the dividends to be free of tax. Treasury consent has been obtained to the issue.

**New South Wales State Railways and Tramways.**—The report for the quarter ended March 31 gives principal details as follows:—Railways—revenue £2,456,096, increase £164,649; expenditure £1,487,348, increase £91,662; number of passengers 25,269,940, increase 1,103,046; tonnage 3,155,469, decrease 33,914; lines open (miles), 4,580, increase 270½; percentage, expenditure to earnings, 60·56 per cent., decrease ·35 per cent. Tramways—revenue £563,937, increase £47,333; expenditure £395,539, increase £3,538; number of passengers, 71,083,908, decrease 5,165,963; percentage, expenditure to earnings, 70·14 per cent., decrease 5·74 per cent.

**Gloucester Carriage and Wagon Company.**—The report for the year ended May 31 states that profit, after making usual provision for depreciation, war dependants, contingencies and internal reserves, was £83,841, and the disposable balance, after deducting interim dividend, £113,609. The directors transfer £10,000 to reserve (making it £200,000), and recommend a dividend at 10 per cent. per annum, less tax, making 10 per cent. for the year, and a bonus of 5 per cent., free of tax, carrying £51,109 forward. The wagon repairing branch has, as at March 31, been transferred to Wagon Repairs, Limited. The assets, however, remain in the balance sheet in lieu of shares in Wagon Repairs, Limited, to be issued.

**Bradford Corporation Tramways.**—The accounts for a year just presented show that the traffic income amounted to £366,496, an increase of £40,090, representing 15·89d. per car-mile, compared with 13·67d. in the previous year. Traffic expenses amounted to £115,800, against £99,700, the principal item being increase of wages in the shape of war bonus, which amounted to £28,000. The war bonus (£47,000) considerably influenced the cost of maintenance and repairs, which showed a rise from £46,500 to £64,700, the maintenance of permanent way accounting for £8,600, and of cars for £9,600, of the increase. Allowances to dependants of employees who have joined the forces amounted to £22,200—an increase of £7,900. Apart from its feeding value to the remainder of the undertaking, the railless system showed a deficit of £2,760, as against £3,170. The gross profit amounts to £87,180, and after payment of interest and sinking fund there is a net profit of £31,376, compared with £30,802. After carrying forward the balance of the profit for the past year the reserve and renewals account now stands at £111,048.

**Northampton Corporation Tramways.**—The balance sheet for the year ended March 31 showed a net profit on the year of £3,235 2s. 8d., of which £1,625 is transferred to the reserve fund, and £1,610 2s. 8d. carried forward. In the year ended March 31, 1917, there was a deficit of £3,003 12s. 6d. The effect of the alterations in the fares is seen in the traffic receipts, which were £44,226 14s. 1d., against £36,953 in the previous year. Wages to motormen and conductors (apart from bonus) absorbed £6,434 5s. 11d., as against £6,434 11s. 3d. in the year ended March 31, 1917, £2,169 10s. 1d. was spent on repair and maintenance of the permanent way, as against £2,559 11s. 6d., and £3,500 in the upkeep of cars, as against £2,789 13s. 3d. Fuel cost nearly £1,000 more than in the preceding year—£5,445 0s. 7d., against £4,489 18s. 10d.; allowances to men who have joined the forces absorbed £1,811 15s. 4d., against £1,647 11s. 3d.; and war bonus £3,000 13s. 2d., as against £982 4s. 3d. On the Parcels Department the income was £438 18s. 10d., and the expenditure £322 4s. 11d. During the year 737,007 car-miles were run as against 748,271. The passengers carried numbered 10,753,042 as against 9,707,456; and the parcels dealt with were 43,131, as against 54,844.

**Kilmarnock Tramways.**—In his report for the year ended May 15, 1917, Mr. W. C. Bexon says that the gross profit was £1,151, as compared with £1,019 for the previous year. After paying interest and sinking fund, and allowing £1,160 for depreciation, the result is a net deficit of £3,163. The traffic receipts per car-mile are 9·228d., as against 7·726d. last year, but owing to the increased cost per car-mile, the final results are a little worse than last year. The operating costs of 8·073d. per car-mile cannot be considered high; in fact, they compare favourably with some other undertakings, but what is required to make the tramways a success is to get higher receipts per car-mile. The tramways system has not sufficient scope to be made a paying proposition, and in addition the ½d. fare is a real drawback to the scheme being a financial success. Practically the whole of the tramway undertakings in the British Isles—except two or three of the large cities—have had to dispense with ½d. fares. Mr. Bexon has occasionally suggested to the committee that the scheme should be revised, and that ½d. fares should be abolished altogether. When this is done he thinks the tramway results will prove more satisfactory. The track is in a very bad condition at present, and extensive repairs have been required owing to loose joints and corrugated rails. The permanent way will have to be completely overhauled when the war is over.

**Keighley Corporation Tramways.**—Mr. Harry Webber, the borough electric engineer and tramways manager, in his annual report, says that notwithstanding the heavy charges for war bonuses and allowances, there is a substantial net profit on the undertaking as a whole. The inauguration of the penny all-the-way fare has been a success. On the railed track the revenue has increased £2,042, but, per contra, the war allowances and bonuses have gone up by £683, and the other working expenses £53. The car-miles have dropped by 35,417, due to reduced evening service, and the passengers have fallen by 413,847, to 3,088,807. This decrease is more apparent than real, however, on account of one ticket now franking a passenger over the whole length. The receipts per car-mile have increased from 11·2d. to 15·8d. On the trackless trolley system a great deal of trouble has arisen through the difficulty of getting repairs to mechanism which was made in Austria before the war. In spite of increased revenue, this part of the system has resulted in a loss of £457, and as soon as possible a further increase in the fares will have to be adopted. The car-miles have dropped from 73,277 to 57,158, but the return has been 19·6d. per car-mile as against 14·1d. The gross profit for the year has been £3,178, and after providing for interest and sinking fund there is left a net surplus of £1,211. It is proposed to pay out of this debts on the trackless undertaking of £762, and on the tramways of £279, and to carry the balance of £170 to reserve fund. Parliamentary sanction to increased war-time fares is looked forward to.

## BURNLEY CORPORATION TRAMWAYS.

In his 17th annual report covering the year ended March 31 last, Mr. Henry Mozley, general manager, Burnley Corporation Tramways, says that considering the effect of war conditions and the strikes which occurred during the year the results were not unsatisfactory. A strike in July, which lasted eight days, caused a loss of £2,600 in traffic receipts and £1,300 in net receipts. This strike was the first experienced in Burnley, and was caused by differences between two trade unions and was ultimately referred to arbitration. Another strike in November, of fitters, turners, etc., affecting two local organisations on the question of 12½ per cent. war bonus, lasted four days, and entailed an estimated loss in traffic receipts of £60. A third strike took place on Christmas Day at the order of the Amalgamated Association of Tramway and Vehicle Workers, when no cars were run, and the loss caused thus amounted to £400 in traffic receipts, and £293 in net receipts. Notwithstanding these losses the net receipts for the year were £6,389 1s. 6d., an increase of £1,166 15s. 10d. The total revenue from traffic was £96,967, an increase of £9,928. Owing to additions to wages by war bonuses and the enhanced cost of material, working expenses increased heavily and amounted to £70,195 as compared with £61,815 in the previous year. The average working expenses per car-mile were 10·64d., an increase of 1·56d., which was due to higher charges for energy made by the Electricity Committee, and to less experienced drivers. The following is a brief summary of the results for the year compared with four previous years :—

| Year ended March 31. | 1918. | 1917. | 1916. | 1915. | 1914. |
|---|---|---|---|---|---|
| | £ | £ | £ | £ | £ |

## BRIGHTON CORPORATION TRAMWAYS.

The annual report of the engineer and manager of the Brighton Corporation Tramways, Mr. William Marsh, for the year ended March 31, has been issued. The financial results are very satisfactory. All previous records have been broken, and the number of passengers carried was nearly half as many again as was the case three years ago. The remarkable growth of the undertaking is shown in the following summary :—

| Year ended March 31. | 1918. | 1917. | 1916. | 1915. |
|---|---|---|---|---|
| | £ | £ | £ | £ |
| Traffic revenue ... ... ... ... | 77,916 | 62,527 | 55,871 | 54,413 |
| Miscellaneous revenue ... ... ... | 2,306 | 2,292 | 2,065 | 2,113 |
| Total revenue ... ... ... ... | 80,222 | 64,819 | 57,936 | 56,526 |
| Working expenses ... ... ... | 48,398 | 41,498 | 41,001 | 42,985 |
| Surplus on working ... ... ... | 31,824 | 23,321 | 16,935 | 13,541 |
| Bank interest ... ... ... ... | 391 | 134 | 38 | 55 |
| Total gross profit ... ... ... | 32,215 | 23,455 | 16,973 | 13,596 |
| Interest on capital ... ... ... | 7,301 | 7,345 | 7,348 | 7,661 |
| Sinking fund ... ... ... ... | 6,195 | 6,432 | 6,429 | 5,917 |
| Income tax... ... ... ... ... | 2,041 | 1,644 | 965 | *491 |
| Revenue contribution to capital outlay | 1,250 | 513 | — | — |
| Net balance ... ... ... ... | 15,428 | 7,521 | 2,231 | 18 |
| | 32,215 | 23,455 | 16,973 | 13,596 |
| Car-miles run ... ... ... ... | 1,152,006 | 1,131,201 | 1,053,285 | 1,108,352 |
| Passengers carried... ... ... ... | 16,942,512 | 13,678,251 | 12,295,198 | 11,837,828 |
| Number of units used ... ... ... | 1,907,537 | 1,837,629 | 1,678,627 | 1,676,770 |
| Units per car-mile ... ... ... | 1·65 | 1·62 | 1·59 | 1·51 |
| Average traffic revenue per car-mile ... | 16·23d. | 13·26d. | 12·73d. | 11·78d. |
| Average traffic revenue per mile of single track ... ... ... ... ... | £4,532 | £3,637 | £3,191 | £3,165 |
| Average total revenue per car-mile ... | 16·71d. | 13·75d. | 13·202d. | 12·24d. |

| Average car miles per day per car ... | 83·92 | 88·56 | 77·76 | 76·08 |
| Average journeys per head of population per annum ... ... ... ... | 126·5 | 102·13 | 91·8 | 88·38 |

* Included in working expenses.

The capital charges on the loan for the Act of 1912 have now been met, but the saving in this respect is far more than counterbalanced by the increase in income tax. The total revenue shows an increase on the year of 23·76 per cent., while the working expenses, including war dependants' separation allowances, have increased by 16·63 per cent. The passengers carried amounted to nearly 17 millions, an increase of nearly 3,600,000. Mr. Marsh remarks that although the undertaking may be apparently prospering, the conditions are abnormal, and in view of the future, fares should certainly be increased, and other steps taken permanently to increase the revenue. Repairs and renewals have been reduced as much as practicable, and the postponement of track renewals is mounting up steadily. Just previous to the war, thorough reconstruction of the track had taken place, and the benefit of the good workmanship then put in is now being felt. In concluding his report, Mr. Marsh says that one outstanding point is the greatly increased expenditure which is bound to come as an aftermath of the war, and no time should be lost in taking the necessary steps to provide for it. Another item of importance is the steadily accumulating arrears of renewals, while insufficient provision is being made to pay for them. Allowing for an increase of 50 per cent. in the cost of track renewals, the undertaking cannot be said to be making sufficient allowance until at least £12,500 per annum is being set aside, with arrears up to date.

## SHEFFIELD CORPORATION TRAMWAYS.

The report for the year ended March 25, 1918, shows that £14,128 was expended during the year on capital account, and that the total capital expenditure now stands at £1,230,495. The revenue account, which is summarised below, reveals a gross profit of £176,679. The motor omnibus section provided a net balance on the year's working of £4,041, and this sum has been transferred to the special reserve fund. A further increase of 5 per cent. was made on December 25, 1917, in the price charged for electrical energy and from June, 1918, another advance of 8½ per cent. came into operation, making a total increase of 33⅓ per cent. on the pre-war figures.

On May 12, 1917, the ½d. fare stages for adult passengers were discontinued on all routes. During the year a settlement was arrived at with the Income Tax Commissioners with respect to the income tax account for the tramway undertaking covering the period from 1900-1 to 1913-14 inclusive. This settlement gave a total net relief of £16,169 for the period referred to and of this sum an amount of £10,799 has been paid into the tramways renewal fund, the remaining balance of £5,389 being transferred to the relief of the General District Rate.

| | 1918. | 1917. | 1916. | 1915. |
|---|---|---|---|---|

## GOVERNMENT TO PURCHASE BRISBANE TRAMWAYS.

The Queensland Government have decided to reintroduce the two bills for the purchase and working of the undertaking of the Brisbane Electric Tramways Company. These bills provide for compulsory reduction in fares so that the profits of the company shall be restricted to not more than 5 per cent. on the value of the tramways. The undertaking is subject to purchase by the Government after September 20, 1920 (under the Act of 1882), and according to legal opinion the purchase terms must be arrived at on the basis of the commercial value of the undertaking as a going concern, the profits being the basis of the valuation. If the fares, and consequently the profits, are reduced meanwhile, the value of the property will be so much less when the time arrives for the Government to purchase the undertaking.

## PERSONAL.

**Mr. F. Harding,** manager of Derby Corporation Tramways, has been granted an increase in salary from £380 to £430.

**Mr. L. P. Wilmhurst,** electrical engineer of Derby Corporation, has been granted an increase in salary from £730 to £950.

**Mr. T. H. Hobson** has been appointed a representative of the London County Council on the Electrical Conciliation Board.

**Mr. A. Williams,** charge engineer, has been appointed cable and station superintendent of the South Lancashire Tramways.

**Mr. Stanley Clegg,** electrical engineer and tramways manager, of Lincoln, has been granted an increase in salary of £250 a year.

**Mr. W. J. Roycroft** has been elected chairman of the new Committee of Management of the Schull and Skibbereen Tramway.

**Captain Barker** has been appointed by Burnley Town Council consulting engineer at the electricity works for the remainder of the war.

**Mr. William R. Anderson,** cable and station superintendent, has been appointed resident engineer of the South Lancashire Tramways Company.

**Mr. G. F. Craven,** general manager of the Reading Corporation Tramways, has been appointed Local Fuel Overseer for the borough of Reading.

**Mr. H. H. Gordon** has resigned his membership of the Electrical Conciliation Board of the London County Council, owing to having joined H.M. Forces.

**Mr. H. Vorley,** accountant in the London County Council Tramways Department, has been granted a sum of £60 as extra duty pay in recognition of special services rendered during 1917.

**Mr. Sidney F. James,** town clerk of Ilkeston and honorary solicitor to the Municipal Tramways Association (Incorporated), has been appointed secretary to the Tramways (Board of Trade) Committee, whose offices are at Buckingham Gate, S.W.1.

**Mr. Hopkin Morgan,** electrical engineer of the Port Talbot Railway and Docks Company, has been appointed district engineer for the purpose of conducting inquiries on behalf of the Coal Mines Department in connection with the economical use of coal.

**Mr. R. Stuart Pilcher,** general manager of Aberdeen Corporation Tramways, has been appointed general manager of Edinburgh Corporation Tramways at a salary of £1,000 per annum. Further particulars of the appointment are given in another column.

**Mr. J. D. R. Cox,** general manager of the Edinburgh and District Tramways Company, has been appointed by the Board of Trade Coal Management Department as district engineer in connection with the coal economy campaign. He will still continue his duties as manager of the tramways.

**Glasgow Tramway Committee's** proposals for increases in the salaries of several officers have been approved. The increases are as follow:—Mr. J. Dalrymple, general manager, from £1,300 to £1,500 per annum; Mr. L. Mackinnon, traffic superintendent, £700 to £750; Mr. J. Ferguson, chief engineer, £700 to £750.

**Mr. William B. McCombe,** eldest son of Mr. W. J. McCombe, manager of Hull Corporation Tramways, has won a classical exhibition at Worcester College, Oxford, from Hymers College, where he is senior prefect, cricket and football captain, and cadet officer of the O.T.C., in addition to being the editor of the "Hymerian," the college magazine.

We regret to record the death of **Mr. T. Hayes,** resident engineer of the South Lancashire Tramways Company. He had been connected with the company for the past fourteen years.

The death has occurred in Berlin of **Herr Arnold von Siemens,** at the age of 65 years. The deceased was the eldest son of the late Werner von Siemens, and a director of the Siemens and Halske Company, and of the Siemens-Schuckertwerke.

## INDUSTRIAL RECONSTRUCTION LECTURES.

The Industrial Reconstruction Council has arranged for an important series of lectures for the autumn and winter. The first of these will be given by the President of the Board of Trade (Sir Albert Stanley, M.P.) on Wednesday, October 2, Mr. G. N. Barnes, M.P., occupying the chair. Other lectures will follow at fortnightly intervals, the second being delivered by the Minister of Reconstruction (Dr. Addison, M.P.), under the chairmanship of the Lord Mayor. Mr. W. L. Hichens, Sir Arthur Steel-Maitland, Bart., M.P., Mr. Ernest J. P. Benn, and Sir William S. McCormick will carry the series up to Christmas, the chair being occupied by Sir Wilfred Stokes, Lord Burnham, Mr. J. H. Whitley, M.P., and the Marquess of Salisbury. The lectures will be given at the Saddlers' Hall, Cheapside, at 4.30 p.m. A full prospectus of the series can be obtained from the Secretary, I.R.C., 2 and 4, Tudor Street, E.C.4.

## TRAMWAY AND LIGHT RAILWAY NOTES.

### ABERDEEN.

A Food Delivery Service.

The Corporation Tramways Committee proposes to extend the present facilities for carrying parcels to include the delivery of bread and meat from shops by means of messengers who would leave the cars at certain points.

### BRADFORD.

Night Carriage of Goods.

The Corporation Tramways Committee is considering the possibility of using the tramway system for the carriage of goods at night.

### CROYDON.

Sunday Service Resumed.

The Sunday morning tramway service has been re-started. There had been much complaint of the absence of the service during a few weeks, and the management therefore decided to resume it.

### DARLINGTON.

Results of Increased Fares.

On the increase of the fares on the Corporation Tramways the number of passengers carried fell from 112,851 to under 96,000 in the first week, but rose by about 2,000 per week in each of the two following weeks. The increases in the takings were approximately £8 to £21 for the three weeks.

### DONCASTER.

Reduction of Services.

The Town Council has considerably reduced the tramway service. The action has been forced upon them by the Board of Trade in order to economise in the consumption of coal, and it is anticipated there will have to be further reductions in the service.

### GATESHEAD.

Reduction of Stopping Places.

The Gateshead and District Tramways Company has considerably reduced the number of stopping places.

### GLASGOW.

Earlier Stoppage—Compensation for the Corporation.

It is proposed to curtail the Glasgow tramway service by about an hour in the evening owing to about a hundred motormen being called up for military service. The Corporation has obtained £130 damages and expenses in settlement of an action against the owners of a steam wagon which ran into and damaged one of the Corporation's tramway cars.

### HANLEY.

Protest against Women as Drivers.

The North Staffordshire Trades and Labour Council has protested against the proposed introduction of women tramcar drivers in the Potteries district. The grounds of the protest may be summarised as (1) sufficiency of discharged soldiers and sailors; (2) strain of the work; (3) cheapening of labour.

### HULL.

Objection to Women as Drivers.

Hull tramway men are strongly opposed to the introduction of women drivers, and they are supporting the appeals of all motormen called up for service. The secretary of the Tramwaymen's Union recently supported the application of the Grade 2 men for exemption before the local Tribunal. He stated that three hundred men had joined the colours, and desired that the remainder should be retained in order to avoid the necessity of employing women drivers. The application was refused.

### LEEDS.

Damages against Corporation—Prospective Extensions.

An action for damages at the Leeds Assizes resulted in an award of £250 against the Leeds Corporation. The plaintiff, a woman in business as a carrier, was driving a motor wagon. A tramcar collided with it, and plaintiff was thrown off and sustained considerable injuries, and claimed chiefly for loss of business. The defence was that plaintiff was negligent. A counter claim for five guineas for damage to the tramcar was dismissed. In connection with a proposal to apply for Parliamentary powers to enable Leeds Corporation to acquire land from the Middleton Estate and Colliery Company for the purposes of a garden suburb for the working classes, the company will give the land and ballast for the construction of a tramway or light railway from the city. It is also proposed to incorporate the township of Middleton within the city.

### LIVERPOOL.

Tramway Workers' Strike.

A strike of a section of Liverpool Corporation tramway employees which lasted only four days caused much inconvenience to the general public, and several disorderly scenes resulted from the action of strike pickets interfering with employees who preferred to remain at work. The strike was engineered by the Municipal Employees' Association, an organisation which is not recognised by the Trades Union Congress, and a programme of demands issued by the strikers'

Digitized by Google

committee included recognition of this association by the Tramways Committee. On the fourth day of the strike a settlement was arrived at. The strikers agreed to resume work forthwith pending arbitration, with the proviso that they should be reinstated, and the Tramways Committee undertook that the manager or deputy manager would receive any official of the association with respect to any *bona-fide* complaint.

### LONDON.

OBSTRUCTORS FINED—DEFECTIVE TRAMWAY LINES—CAR OVERTURNED.

Fines of 40s. with costs were imposed at a police court recently on each of two defendants for being the owners of vehicles which, owing to their defective condition, broke down and caused an obstruction to the traffic on the London County Council Tramways. Accidental death caused by defective tramway lines was the verdict at a coroner's inquest upon a woman who was a passenger inside a motor omnibus when a motor lorry going in the opposite direction got beyond the control of the driver and came into collision with the omnibus. A London County Council tramcar passing from Blackfriars Bridge overturned on the Victoria Embankment. There were about seven or eight passengers on the car. Two were removed to hospital. Others suffered from contusions and shocks. Neither the driver nor the conductor was hurt. An electric standard was broken. Soon after the car overturned flames shot up from the conduit, but the fire soon ceased on the application of sand.

### MANSFIELD.

LIFE-GUARD COULD NOT ACT.

At an inquest upon a three-year-old child, it was stated that the deceased ran to cross the road in front of a tramcar and fell between the gate and the life-guard, so that the life-guard could not drop. The car was being driven by a man, aged 28, a learner, who was being instructed by a woman, who had been tramcar driving for two years. A suggestion was made that at the moment of the accident a biscuit was being handed from one to the other, but this was denied. The woman said that had she been driving she might have been able to prevent the accident. The jury returned a verdict of "Accidental death."

### ROTHERHAM.

THE PURCHASE OF MEXBOROUGH AND SWINTON TRAMWAYS.

Sir John Snell, in giving evidence in support of the Bill of Rotherham Corporation, said that he considered £45,000 a reasonable price for the purchase of the Mexborough and Swinton electric tramways undertaking. At least £15,000 would be obtained by the sale of plant which the Corporation would not require. Rotherham would be able to supply electricity at a much cheaper rate than the Tramway Company could possibly obtain it, and they might look for an immediate revenue of £31,000 a year.

### SCARBOROUGH.

FACILITIES FOR FISH DISTRIBUTION.

The Scarborough Tramways Company proposes to carry fish on the tramways from the piers to the goods station, and to seek assistance from the Government towards the cost of laying the additional track.

### SHEFFIELD.

AUXILIARY DRIVERS.

At a meeting of the Sheffield Tramway and Vehicle Workers' Association the opinion was expressed that some of the auxiliary drivers were coming to tramway work in order to evade military service, and it was resolved to request the management to employ no men in Grade I. as auxiliary drivers.

## CONTRACTS AND ORDERS.

**Southend Light Railways Committee** have ordered an electric welding plant from Scott Anderson.

**Glasgow Tramways Committee** have placed a contract with Hadfields, Limited, for special work.

**The Vacuum Oil Company** are supplying 700 gallons of transformer oil to Walsall Electricity Department.

**Bradford Corporation** have accepted a tender from C. A. Parsons and Company for a 12,000-KW. turbo-generator.

**The British Westinghouse Company** have an order from Belfast Electricity Committee for a 1,000-KW. transformer at £1,305.

**Belfast Electricity Committee** have placed a contract for the supply of cables with Callender's Cable and Construction Company.

**Salford Tramways Committee** have ordered from Hadfields, Limited, four pairs of manganese points and twelve manganese crossings at £695.

**British Westinghouse Electric and Manufacturing Company's** tender have been accepted by Newcastle-under-Lyme Corporation for a 150-K.W. rotary converter with high and low tension switch for £2,160 15s.

## STANDARD TRAMWAY RAIL FOR AUSTRALIA.

A meeting of Australian electric tramway engineers convened in Sydney, N.S.W., to consider the adoption of a standard grooved girder tramway rail, passed the following resolutions :—

1. That a standard girder rail be adopted for the tramways of the various States of the Commonwealth.
2. The weight of the girder rail for the tangent track shall not be less than 90 lb. per lineal yard, the exact weight being subordinated to the design.
3. That the height of the girder rail be not less than 6 in.
4. That the width of the flange shall not exceed the height of rail by more than ½ in.
5. That the conference is agreed that the form of groove and guard of the rail should take the form of the present standard of the American Electric Railway Association.
6. That the tread of the proposed section of rail shall approximately conform to that shown in blue print No. 3365 of the Adelaide Municipal Tramways Trust.
7. That Mr. Cowdery, engineer for permanent way, New South Wales Government Tramways, be asked to get from the manufacturers the chemical and physical tests of steel that they can guarantee for tramway purposes, and that it be left to him to design a rail in conformity with the resolutions of the conference.

The tread referred to in Resolution 6 is struck to a radius of 12 in., with a 5-16 in. radius on the running edge, which the conference resolved would tend to give a longer life both of wheels and rails.

Owing to the difficulty of importing rails from overseas, the manufacture of rails in Australia has become necessary, and the Broken Hill Proprietary Company, Limited, which has steel works and rolling mills at Newcastle, N.S.W., proposes to instal a plant to roll grooved girder rails of the standard section.

## ELECTRICITY SUPPLY.

GOVERNMENT INTENTIONS STILL UNCERTAIN.

Before the adjournment of the House of Commons, Colonel W. Thorne asked the President of the Board of Trade if any statement could be made as to the intentions of the Government with regard to the Report on Electricity Supplies; if he was aware that the uncertainty at the present time of the Government's intentions was embarrassing to public bodies owning electricity undertakings, and that it was difficult for the local bodies to determine the proper course of action in regard to the extension of their plant and negotiations with their large consumers; and if he intends taking action in the matter? Sir A. Stanley, in reply, said the report was receiving careful consideration, but he regretted that he was not yet in a position to make any statement as to the intentions of the Government in regard to it.

## PATENT LIST.

### Abstracted for "The Tramway and Railway World" from the Official Journal of Patents.

***** If the inventions have been communicated the names of the communicators are given in italics.**

### APPLICATIONS FOR LETTERS PATENT.

Rear axle structures for motor vehicles (10,786)—Albion Motor Car Company, T. B. Murray, and G. Pate.
Road wheels of automobiles (10,952)—F. W. Baker.
Variable speed mechanism (10,956)—Barr and Stroud, Limited, and J. W. French.
Differential gearing (11,134)—Brown-Lipe-Chapin Company and D. D. Ormsby.
Spraying apparatus for use on automobiles for laying dust raised (10,842)—H. A. Bull and J. A. Vanrossum.
De-rails (11,127)—S. W. Hayes.
Steering mechanism for road vehicles (11,001)—R. C. W. Horsley.
Motor vehicles (11,131)—P. G. Hugh and Scammel and Nephew.
Spring mechanism for motor lorries (11,132)—P. G. Hugh and others.
Brake mechanism for motor lorries (11,133)—P. G. Hugh and others.
Change speed gear for motor vehicles (11,141)—P. G. Hugh and others.
Mechanism for brakes of motor vehicles (11,142)—P. G. Hugh and others.
Change speed gear mechanism (10,903)—G. Mansell (*H. J. Mansell*).
Control of electrically-propelled trucks, etc. (10,857)—P. A. H. Mossay.
Electrically-propelled trucks (10,858)—P. A. H. Mossay.
Electrically-propelled vehicles (10,859)—P. A. H. Mossay.
Resilient wheel composed of flat circular spring spokes for motor vehicles (10,950)—J. F. Tallis.
Automobile conversion mechanism (11,071)—H. R. Williams.
Lubricators or oil cups (11,268)—S. Akeroyd and J. W. Senior.

Apparatus for indicating speed of vehicles (11,418)—J. B. Tucker.
Couplings for electrical conductors (11,279)—H. Williams.
Traction couplings (11,585)—M. Barker.
Self-propelled vehicles (11,859)—British Westinghouse Electric and Manufacturing Company and H. Mensforth.
Trolley heads for electric traction (11,779)—F. Haigh, W. Pickersgill and J. H. Vitt.
Speed indicators (11,853)—A. P. Japy.
Shock absorber for train transmission or shaft drive of motor cars (11,793)—J. B. Merry.
Bodies of motor vehicles 11,816)—W. Ivey-Rogers.
Trolley retriever (12,246)—B. P. Allen.
Car couplings (12,158)—R. K. Anderson.
Automatic stopping place indicator for tramway cars (12,196)—E. Bennett and A. Briggs.
Trolley heads (12,021)—S. Butler.
Insulators for supporting electric conductors on transmission lines (12,201)—Callender's Cable and Construction Company and C. W. Kay.
Power or drive transmission mechanism in motor vehicles (12,072)—A. J. Henderson.
Apparatus for electrically controlling air brakes (12,086)—W. J. Mellersh-Jackson (*Waterhouse and Prince*).
Receptacles for storage of compressed gas for motor vehicles (12,055)—G. P. Ottino.
Means for steering or controlling motor vehicles (11,956)—F. L. Rapson.

## Specifications Published.

1916.

Variable speed and reversing gearing (16,083—*104,161*)—W. Morrison.

1917.

Motor car radiator caps (5,331—*116,310*)—L. Callender and A. Callender.
Braking and steering devices for motor vehicles (8,131—*116,345*)—J. Cox.
Spring suspension mechanism of motor vehicles (8,239—*116,358*)—Birmingham and Midland Counties Transport Company and G. E. D. Ralls.
Life-guard for motor vehicles (10,143—*116,389*)—J. Stokes.
Variable speed transmission gear (10,406—*116,394*)—F. Molyneux.
Electro-pneumatic braking systems (12,727—*115,016*)—W. V. Turner.
Life-guards for tramway vehicles (12,759—*116,420*)—J. Worsnop and others.
Carburetters for automobile engines (14,291—*110,548*)—Soc. Lorraine des Anciens Etablissements de Dietrich et Cie de Luneville.
Variable speed gear (16,316—*116,456*)—B. A. Malkin.
Railway or tramway sleepers and chairs (17,696—*116,461*)—S. P. Keates.
Apparatus for operating railway and like points by wire (19,237—*116,466*)—E. I. M. Vincent, J. Servais and Tyer and Company.
Motor car bodies (8,267—*116,527*)—G. Roesch and C. Talbot, Limited.
Driving apparatus for motor lorries (8,483—*116,537*)—J. T. Roberts and L. Johnson.
Combined carburetter control mechanism and air admission means for engines of motor vehicles (9,091—*116,565*)—R. W. Maudslay and Standard Motor Company.
Railway sleepers (16,351—*116,640*)—W. H. Meyrick.
Gas generators for use in the propulsion of automobile vehicles (8,609—*116,746*)—J. W. Parker and E. G. Abrahams.
Motor car chassis and other parts (8,644—*114,136*)—C. L. Heyermans.
Steer mechanism for motor vehicles (8,823—*114,293*)—C. H. A. Edye and C. L. Heyermans.
Change speed gear and clutches specially applicable for motor vehicle engines (8,969—*116,917*)—H. Lindblom.
Lifting jacks for pneumatic tired motor cars (9,770—*116,948*)—J. R. Watson.
Lifting jacks (14,173—*116,995*)—F. L. Rapson.
Speed indicators or tachometers (9,430—*116,937*)—W. Chadburn and W. R. Chadburn.

1918.

Variable speed gear (2,212—*116,476*)—T. S. Wilson and S. C. Bone.
Combined safety guard and brake for the front wheels of motor road vehicles (1,953—*116,669*)—W. H. Puttergill.
Rails for tramways and railways (2,185—*116,864*)—W. H. Jenkins.
Driving gear for electric locomotives (1,124—*114,417*)—Akt.-Ges. Brown, Boveri & Cie.

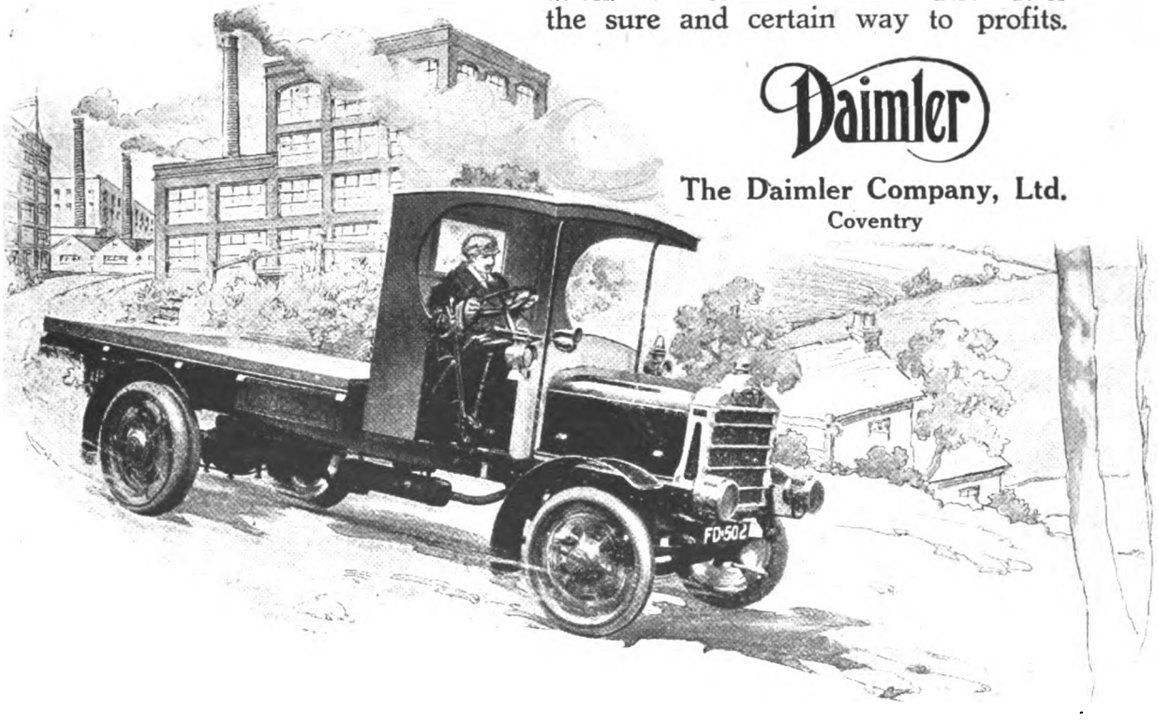
# The Return Journey.

ONE of the problems of commercial motor traction that is receiving deep consideration is that of the return journey without a load. Unproductive mileage is waste, and with a return to normal conditions cannot be long tolerated. Profitable as a motor vehicle, such as a Daimler, now is, it will be still more so when services are properly organised and efforts co-ordinated.

When the war ends there will be money to be made by the owners of *good* Lorries. Trade will flow in the channels where it can be dealt with. Delivery of materials will be the principal object. Price will be a secondary consideration. Get on the Daimler List. It is the sure and certain way to profits.



Daimler

The Daimler Company, Ltd.

**GAS-DRIVEN OMNIBUSES.**

Much importance attaches to the system of gas traction for omnibuses, which is described and illustrated in this issue. The whole cumbrous and unsightly arrangement of a "flexible container," in plain English, a huge gas bag, on the top of a motor vehicle is done away with; its place is taken by metal cylinders placed out of sight, where the gas is stored at high pressures. The scarcity and high price of petrol has led to the considerable use of gas for commercial motor vehicles, but the gas-bag arrangement, which can be endured in their case, is quite inapplicable to double-deck omnibuses. If the roof seats were abolished, the earning power would be cut down enormously, and the vehicles which in London cannot at present carry all the traffic which offers would be further handicapped. It was plain from the first that if gas was to be used it must be carried in a compressed state in or under the vehicles, just as it has been in the case of a few tramways which have been worked by gas traction. The conditions of service for omnibuses in London are peculiarly severe, and a design had to be got out which would, on the one hand, meet these conditions, and at the same time secure the approval of the Metropolitan Police authorities. The scheme worked out by the engineering staff of the London General Omnibus Company fulfils the second of these requirements, and so far as can be judged before prolonged daily experience on the road has been obtained, it fulfils the first.

* * * * * *

A point to be noticed is that the system is both simple and efficient in its elements, and that the gas supply is so automatically regulated that the driver has no more to do than when petrol fuel is used. In fact, so far as he is concerned he might be driving a petrol omnibus. Further, very severe hill-climbing tests show that the automatic supply to the engine is fully sufficient and constant under the most severe loads. It will be seen from the illustrations, also, that no change whatever is made in the appearance of the omnibus. Particular attention has, of course, been given to the design and construction of the cylinders which are to hold the compressed gas. They have not only to be gas-tight to begin with, but they have to remain so under the continual shock and vibration to which everything on an omnibus is subjected. They have also to be very strong in order to stand the pressure, and in that connection it is of special interest to note that they are wound with steel tape in the same way as a big gun is. It may further be pointed out that the automatic feed to the engine is at low pressure, and that an offset to the weight of the cylinders is found by substituting gas lighting of the omnibuses for electric lighting. That does away with the weight of a small dynamo and a storage battery.

**PROTECTION AND THE MOTOR INDUSTRY.**

It would appear that we are approaching the time when the Government may be expected to give a bold indication of its policy in the matter of the protection of British industries by means of taxation of imports. We are told that the War Cabinet has approved a scheme of Imperial preference. The adoption of any such scheme obviously involves the widespread imposition of tariffs. The matter has no doubt been pushed ahead not only by the Dominion Governments, but also by the evident need of coming into line with our Allies with respect to some general policy in the mutual interests of the whole group of Powers, and intended, at least partly, to serve as a strong weapon against our present enemies. Unquestionably if we all act together in this matter we can deal German commerce an almost fatal blow. Consequently, our ability so to act represents a great asset in our hands when it comes to the negotiation of peace terms. It is, in fact, an asset which we certainly ought not to relinquish except in return for considerations of the highest possible value to our friends and ourselves. Thus at one end of the scale we have the evident desirability of so moulding our system as to make it possible to exclude or handicap enemy goods to any desired extent. At the other end we have the desire of the Dominions for the establishment of a closer bond in the shape of an Imperial preference. Taking these two facts in conjunction with the indicated change of opinion within this country itself on the general question of import duties, it would seem that the Engineering Trades Committee was fairly well justified when it took the imposition of such duties for granted, and therefore would not discuss their desirability.

* * * * * *

The main point to be emphasised is that whether we are in principle free traders or protectionists, need not affect our attitude towards proposals which are not put forward except as extraordinary measures to meet extraordinary conditions. Ever since the war broke out we have had to accept the sudden adoption

Digitized by Google

# MOTOR TRAFFIC.

of principles against which at any other time we would probably have fought tooth and nail. It will be just as necessary for some of us to recognise that principles which are dear to us must be relinquished, at least for a time, in view of the necessity for re-establishing industries which during the war have been bereft of their hard-earned goodwill through no fault of their own. The motor industry is one of these. Not only will it start its post-war operations under a severe handicap because of its lengthy exclusion from its markets, but it demands particular consideration also upon the ground that it has proved to be absolutely essential to our national well-being, and, in fact, to our national existence. Had we not possessed a motor industry when the war broke out, our difficulties in respect of transport would have been immense, and probably insuperable. We should never have gained our existing superiority in the air, and our output of munitions of war would have been very considerably curtailed. The industry has done wonderful work for the British Empire, and it deserves that this fact should be recognised even if its recognition involves certain steps that some motor users would at any other time be unwilling to take.

### NATIONAL ROADS.

On various occasions the view has been expressed in these columns that the roads must be made for the traffic which they are to bear, and that the policy of endeavouring to make the traffic suitable for existing roads is altogether wrong. At the present moment we are faced with a national necessity for considerable expenditure upon road improvement. This is due partly to the serious deterioration of the roads due to war traffic and inefficient maintenance owing to a shortage of labour. It is also in part due to the fact that our roads are now required principally for the purpose of carrying a class of traffic for which they were not originally designed. There are those who, recognising only this latter fact, maintain that if any improvement is to be effected then the new class of traffic must foot the bill. This is really a most obstructive, and, indeed, reactionary point of view. It is as much as to say that an improved method can only obtain the right to be adopted upon payment of taxation or fees representing in principle something very much like an obligation to buy out the obsolete method which is to be displaced. If the owners of motor vehicles were the only people who would benefit by improved roads, then it would be reasonable that they should pay the whole of the cost of improvement. If the whole community will benefit, as will certainly be the case, then the charge should be upon the community. The effect of a general introduction of motors in place of horsed vehicles would be, amongst other things, an immense reduction in the congestion of traffic upon town roads. In towns where traffic is at all heavy the roads must in any case be properly constructed. The consequence is that, in such places, the motor represents a great economy to the whole community. On the other hand, in sparsely populated country districts motors may lead to a certain amount of road wear without producing any corresponding return to local residents. At any rate, their local value and utility does not suffice to justify the local authority in incurring heavy outlay on road reconstruction. The trouble really seems to be that we have reached a point which does not admit of any fair treatment of the subject, short of the nationalisation of the roads. Possibly a compromise will have to be adopted for the time being, but this would be regrettable. It is impossible to deal with the subject properly in small sections and from a parochial standpoint. The great outstanding fact is that enormous sums of money must presently be spent on road reconstruction, and that the cost should be borne by those who will benefit. This would involve expenditure in some districts which would have to be borne by outside sources. The districts which actually benefit by the presence of motors ought to assist those who are temporarily embarrassed by the traffic revolution.

### REASONABLE STANDARDISATION.

We cannot expect to be told very much of the plans of motor manufacturers until those plans are complete, but we have the right to assume that the long period that has elapsed since commercial motor vehicles were freely available to the public will not be allowed to terminate without very definite steps having been taken in the direction of securing a degree of standardisation which will facilitate the maintenance of vehicles and also reduce their manufacturing cost. This is possible without standardisation being carried to such extremes as to suppress the individuality of types. No sensible man wants this to happen yet. Healthy competition is good for all, and the excessive standardisation of all vehicles of a certain load capacity would mean the elimination of competition, and almost certainly would involve the formation of a price-maintaining ring. There are, however, great possibilities in standardisation without going so far as this. America has shown us what important results may be obtained by standardising what may appear to be trifles. There is no doubt that at present the industry uses materials, components, and fittings of an unnecessary number of sections, sizes, and types. A moderate degree of standardisation would reduce the number in each case so that there still remained a sufficient variety from which to select, but so that the manufacturers of these materials and other items would be able to concentrate their production upon much fewer lines, and consequently to produce far more cheaply in the lines standardised. The impetus in this direction must come from the vehicle manufacturer, if it is to come at all. Thus, if the vehicle manufacturer make no move, then undoubtedly the user will have a legitimate grievance against the British industry, which may well result in an unnecessarily large proportion of business going to foreign concerns.

## £1,000 PRIZE FOR COAL-GAS MOTOR INVENTION.

The offer by the Automobile Association of £1,000 for the best method of using coal gas on motor vehicles appears to have aroused considerable attention. A number of inventions have, it is stated, been definitely entered for the competition and many valuable suggestions have been received. Entries for the competition have been received from well-known engineers and gas experts, private motorists, members of the motoring industry, and working men and mechanics, many of whom have for some time past been endeavouring to devise practical and inexpensive methods of propelling motor vehicles with coal gas and other fuels. Copies of the entry forms and the conditions governing the competition will be sent upon application to the Secretary, A.A. and M.U., Fanum House, Whitcomb Street, London, W.C.2.

## THE NEW CLARKSON MOTOR.

### A COKE BURNING STEAM CAR.

The prospect of one penny per mile fuel cost for a standard 3-ton vehicle will ensure the most careful consideration of the new Clarkson coke fuel steam motor, which is shortly to be put upon the market by the National Steam Car Company, Chelmsford and London. The promise which the invention holds out is extremely important at a time when the cost of liquid fuel has appreciated to the extent of between 300 to 400 per cent., and is difficult to obtain in adequate quantities even for work of considerable importance to the community.

We have known for some time that, encouraged by the success of his experiments in the conversion of a number of the company's oil burning machines to coke fuel burners, Mr. T. Clarkson was patiently working to evolve a new type of steam motor specially designed for coke fuel, in which as far as possible all the defects of past practice should be eliminated. Naturally the difficulties, both with regard to labour and material, have proved a severe handicap, but it is safe to say that a study of the illustrated description that we are now able to give of the new motor will convince readers that Mr. Clarkson's latest design is worthy of his high reputation, and that he is to be congratulated upon his achievement.

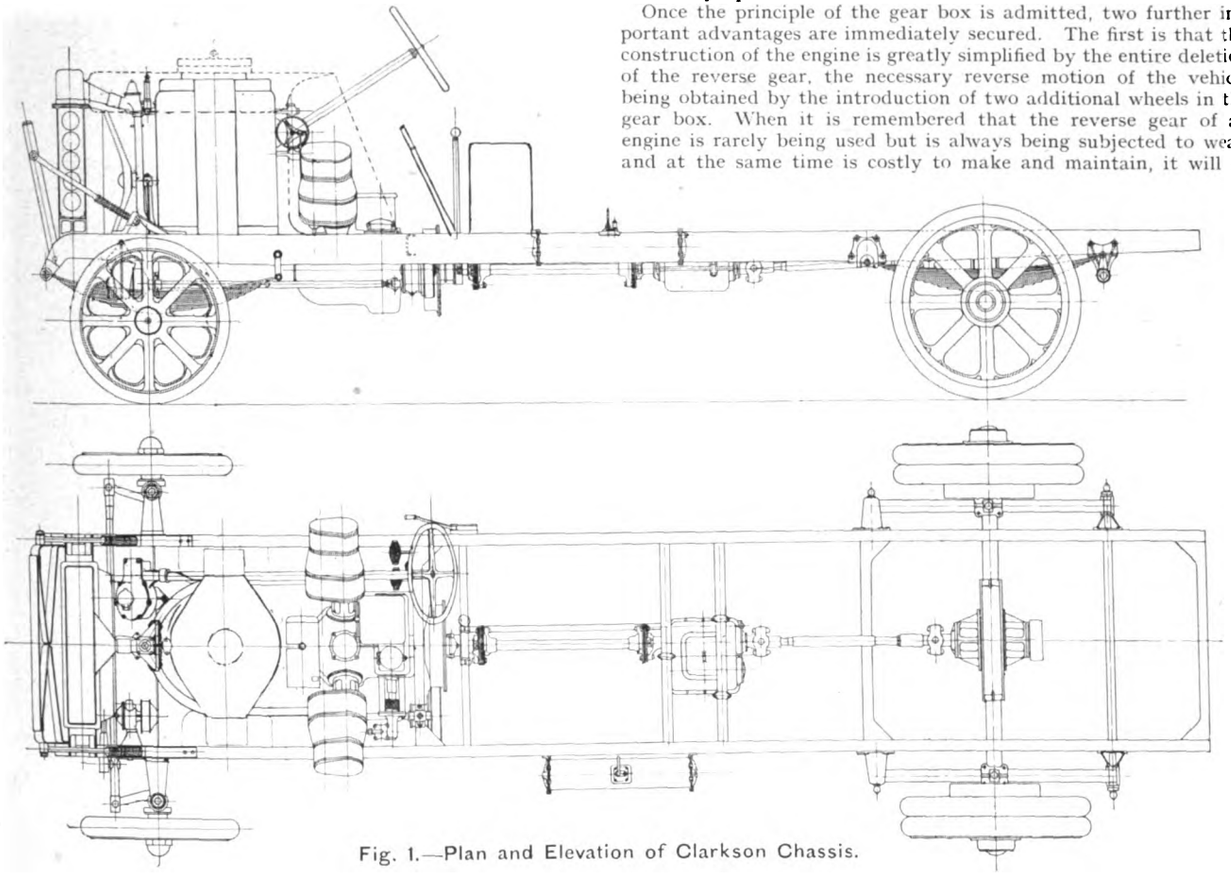

Fig. 1.—Plan and Elevation of Clarkson Chassis.

On the invitation of Mr. Clarkson, a representative of THE TRAMWAY AND RAILWAY WORLD recently had the opportunity to inspect the new machine, and to test its capabilities in running. As a result a firm opinion was formed that for smoothness in running, ease of control, and rapidity of acceleration even from a dead start on a stiff gradient the motor leaves little to be desired.

The power unit is primarily intended for use on industrial road vehicles. It is simple in construction, strong, and eminently suitable for operation by relatively unskilled drivers. A most important feature in the design of this new steam chassis is the standardisation of the controls in such a manner that the driver need have nothing to do with the adjustment of the mechanism or its lubrication. All that is necessary for him to do is to control the vehicle in precisely the same manner as with a petrol motor. It therefore follows that a driver used to handling a petrol machine can at once operate the new vehicle, and will find each pedal and lever in the usual position. Moreover, each performs the same function as that to which he has been accustomed, i.e., in addition to the steering column there is a clutch pedal operated by the left foot, brake pedal by the right foot, and the usual levers for the hand brake and gear change (Fig. 4).

In arriving at the decision to instal a gear box, Mr. Clarkson explains that experience has proved conclusively that an engine, whether steam or petrol, cannot develop its full power unless it has sufficient piston speed. Therefore it follows that in order to meet the extreme conditions of heavy loads and soft ground, and light loads and hard ground, at least two gear ratios are necessary between the engine and the driving wheels. Hitherto it has been held that a steam engine having a wider range of flexibility than a petrol engine could be fitted to a commercial vehicle without a gear box, and many vehicles have been so constructed. It is clear, however, that in order to meet the heavy load and soft ground conditions a larger engine is necessary than would serve for the ordinary working conditions. The inventor was consequently led to the conclusion that an emergency gear ratio should be provided for that purpose.

Once the principle of the gear box is admitted, two further important advantages are immediately secured. The first is that the construction of the engine is greatly simplified by the entire deletion of the reverse gear, the necessary reverse motion of the vehicle being obtained by the introduction of two additional wheels in the gear box. When it is remembered that the reverse gear of an engine is rarely being used but is always being subjected to wear, and at the same time is costly to make and maintain, it will be appreciated that the employment of the one-direction engine, such as is installed in the Clarkson power unit, is a decided advance in simplicity and efficiency. The other important advantage resulting from the adoption of the gear box and clutch is that the engine can be run "free." This is useful not only for warming up first thing in the morning, but also because during long waits the engine can be allowed to turn over quietly. In this condition the vehicle can be left for an indefinite time, as the engine will automatically look after the maintenance of water feed, steam pressure, and lubrication. In an actual test the chassis was left with steam up all night without any attention from the driver; in this condition it was instantly available for service in the morning. Moreover, the consumption of coke in turning the engine round in this way was comparatively insignificant.

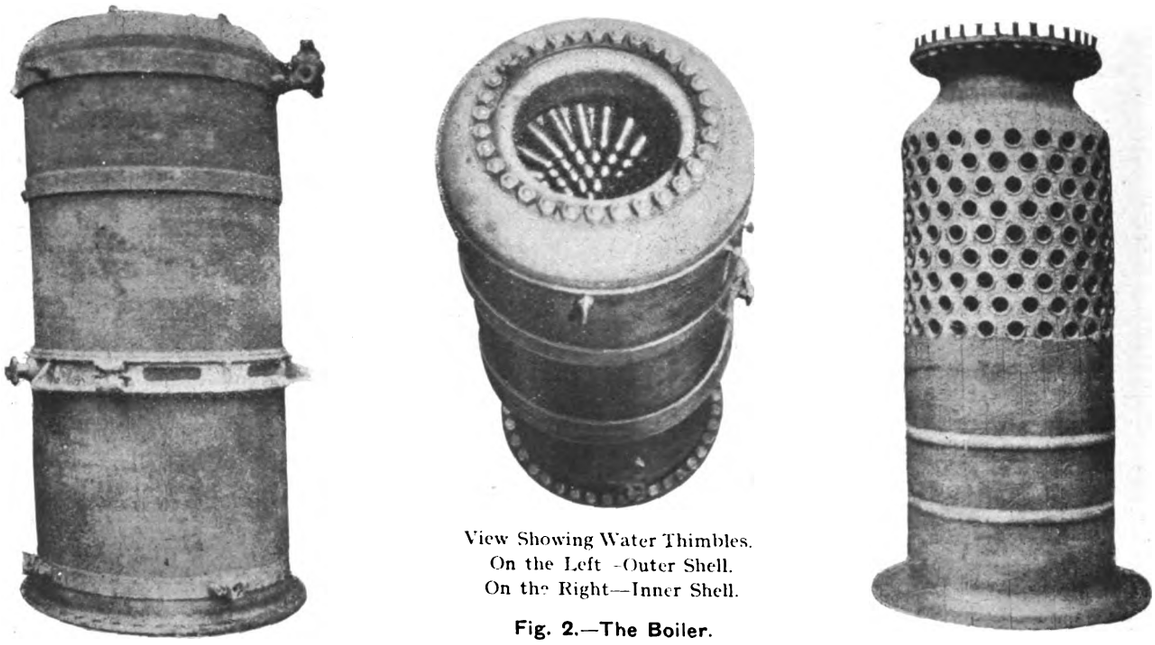
As will be seen from the plan and elevation of the chassis, Fig. 1, the Clarkson new power unit—to be known as type ix.—comprises boiler, engine, and condenser. This is arranged in so compact a form that with very slight alteration to the frame it could be mounted upon any 3-ton chassis of standard make. The boiler consists of two cylindrical steel shells, flanged and bolted together at each end. The shells are each forged and drawn under hydraulic pressure, there

Digitized by Google

# MOTOR TRAFFIC.

being no welds or rivets in any part of the boiler. Fig. 2 shows the inner and outer shells, and also a view looking in from the top of the boiler, from which the water tubes or thimbles can be seen. The outer shell is formed with thickening belts where holes have to be drilled for the attachment of boiler fittings. The inner shell is drilled for the reception of the water tubes, which are of the "thimble" type, 4 inches long, tapering to the inside end but of an average diameter of 1¼ inches.

These tubes are not expanded, but are pressed into the inner shell and held in position by the pressure within the boiler. It will be noted that in this simple arrangement one of the most prolific sources of trouble in the ordinary steam boiler, viz., leaky tubes, is effectively avoided. The working pressure is from 300 to 350 lbs. per square inch, and the maintenance of this pressure is automatically controlled by an oscillating valve, which regulates the draught of the fire according to the requirements.



View Showing Water Thimbles.

On the Right—Inner Shell.

**Fig. 2.—The Boiler.**

Although the boiler is designed for solid fuel, liquid fuel can be used if desired. The solid fuel is fed through the central tube at the top of the boiler, this tube being surrounded by a super-heating coil, the temperature of the super-heat being 620 deg. Fahr. The supply of water to the boiler is delivered by a pump operated by the engine at reduced speed. This is controlled automatically by

a reciprocating float, which acts upon the foot valve of the feed pump in such a manner that, as the float rises with the water level, it prevents the foot valve returning to its seating (Figs. 8 and 10). As a result the charge of water drawn into the pump barrel returns to the tank instead of being forced into the boiler, until such time as the float descends and allows the foot valve again to become operative. As will be seen, this system of water control maintains a constant working level in the boiler without any attention from the driver.

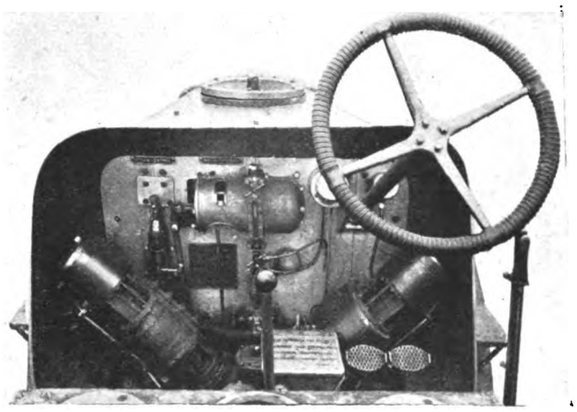

**Fig. 8.—View Inside Dash, Showing Position of Engine, Reciprocating Float, etc.**

The feed water is introduced at the waist of the boiler, but is not permitted to impinge directly upon the inner shell of the boiler, which is in direct contact with incandescent fuel. The water first strikes a thin steel plate between the inner and outer shell, and any deposit from mineral salts that may be contained in the water is thus arrested, and, falling by gravity to the lowest part of the boiler, is from there removed by the blow-off valve. A safety valve of the usual locomotive type is provided, which discharges through a vacuum valve into the condenser. The boiler is also fitted with blow-down valve, feed check, and reflex water gauge. The complete arrangement of the boiler is shown in Fig. 3.

The engine is a vee type tandem compound, and a good idea of the general arrangement of its detail will be gathered from the drawing which is reproduced in Fig. 9. The engine's location in the chassis can be clearly seen in the illustration showing the inside of the dash in Fig. 8. The two pairs of high and low pressure cylinders operate the same crank at an angle of 90°. Thus a very even torque is obtained as well as a perfect balance, securing smoothness of running and absence of vibration at speeds up to 1,500 revolutions per minute. The leading dimensions of the engine are as follows :—

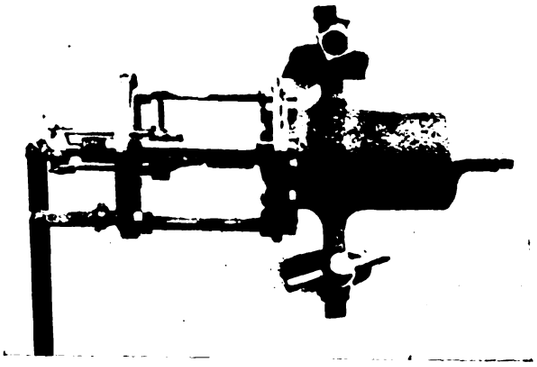

**Fig. 10.—Float Operating Gear.**

High pressure cylinders, 3 in. diameter ; low pressure, 5 in.; with 3 in. stroke in each case.

The engine is enclosed and self-lubricating, two systems of lubrication being employed. For the cylinder lubrication a trigger pump is provided. This is immersed in a bath of cylinder oil, and is so set that a drop of oil is forced into the steam pipe once in every 100 revolutions. A film of oil is thus maintained upon the inner surfaces without the possibility of excess. For the general lubrication of the engine, a gear pump is provided. This is placed in the lowest part of the crank case, and is therefore not subject to air locks. The oil is conveyed under pressure from this pump to all the

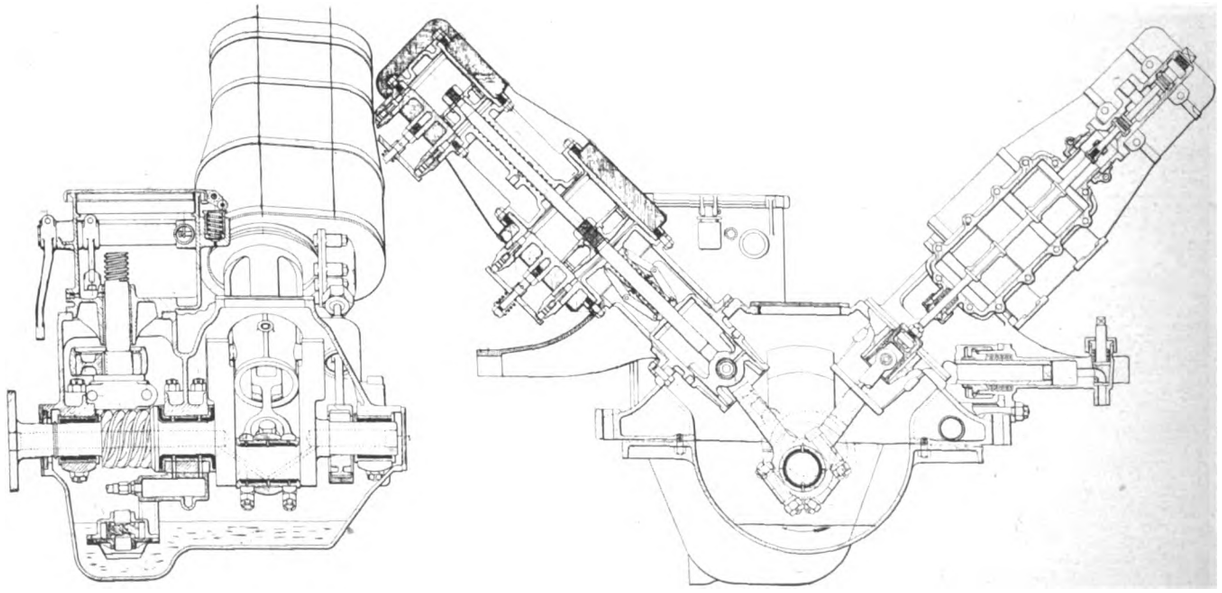

**Fig. 9.—Arrangement of the Clarkson Engine.**

As the vehicle can travel from 30 to 60 miles on one charge of water—the actual mileage being dependent upon the character of the load and road—it can easily be arranged for supplies of clean water to be taken more or less at regular intervals, and so obviate the questionable practice of picking up supplies from ponds and other doubtful sources.

working parts of the engine, including the three journals on the crank-shaft, the crank-pin, eccentric, and crosshead guides. The latter feature is a new development in engine lubrication.

The crossheads are made of steel, case-hardened and ground with about three one-thousandths of an inch clearance in a ground cylindrical crosshead guide. At the point of mid-stroke oil is

Digitized by Google

# MOTOR TRAFFIC.

introduced through the crosshead guide on to the working face of the crosshead, and as the length of the crosshead is in excess of the length of the stroke, it follows that the hole supplying the lubricant is never uncovered by the crosshead. By suitable channelling in the face of the crosshead, and holes leading therefrom to the gudgeon

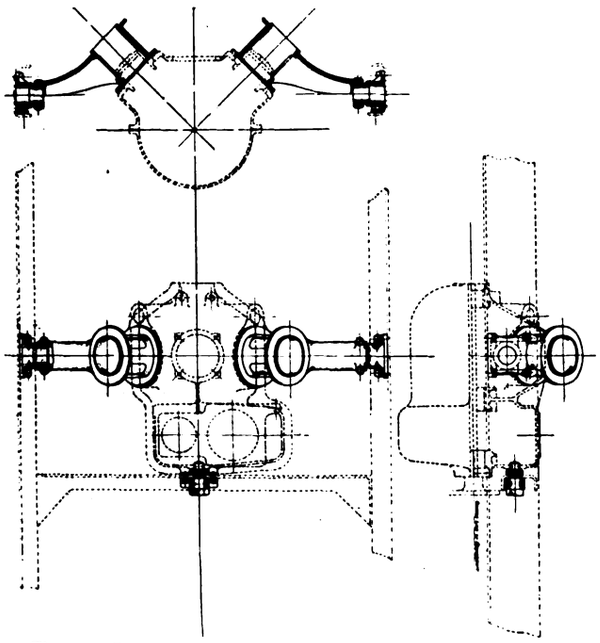

**Fig. 11.—Plan Showing Method of Mounting Engine.**

pin, this also is placed in communication with the oil pressure feed. This unique arrangement has been found in practice to work with complete satisfaction.

Piston valves are used on the high pressure cylinders, and flat valves on the low pressure, a single eccentric operating all the valves on both lines of cylinders.

The method of mounting the engine on the chassis frame is a novel departure, and provides for the utmost flexibility and stability. This is clearly shown in the drawing, Fig. 11. As will be seen, the

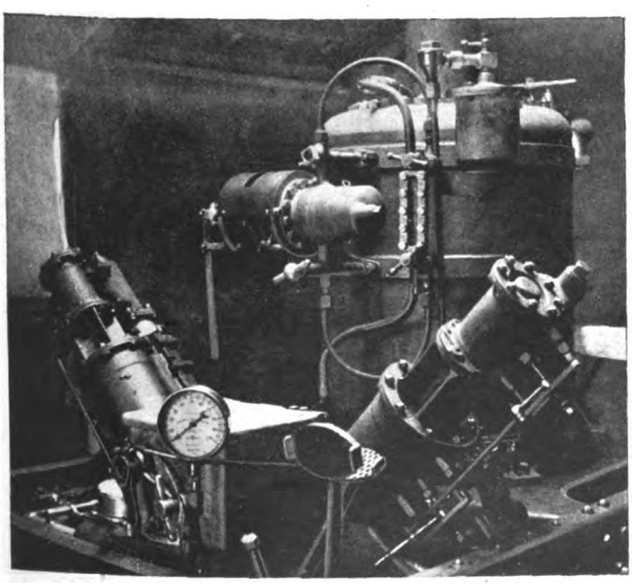

**Fig. 12.—View Showing Complete Power Unit on Test Bed.**

engine is connected to the frame by two extending arms, which terminate in bearings, the bearings embracing trunnions which are securely bolted to the side members of the frame. At the rear of the engine a cross member of the frame carries a pin, which fits into a hole on the pump case of the engine. The engine is thus carried upon three cylindrical supports, and is free to slide upon them, there being no unnecessary constraint imposed upon the engine, and at the same time it has a wide base of support to resist the torque and to carry the weight without the employment of a sub-frame.

The condenser is situated in the position usually occupied by the radiator on a petrol chassis, and as the illustration (Fig. 7) shows, varies very little in appearance from that familiar component. It consists of a top and bottom header connected by tubes. Considerable trouble has been experienced in the past in keeping condensers of this type watertight under conditions of road vibration and the strains introduced by the expansion of the radiating tubes, due to the passage of steam through them. The improved method adopted in the present case has entirely remedied this defect. This improvement consists in allowing the lower tube plate to move up and down within suitable guides, as may be necessitated by the changes of temperature in the tubes. In other words, the lower header is actually hung upon the tubes, and is kept in position within the guides by four short stiff springs.

The back of the condenser is shrouded, and fitted with a powerful fan driven by a belt from a short lay-shaft running along the side of the chassis from the engine. At the forward end of the lay-shaft a rotary pump is placed for the purpose of draining the lower header of the condenser, returning the water of condensation to the tank through a filter in which the cylinder oil is extracted.

From the foregoing description of the general views shown in Figs. 4, 5, and 6 it will be seen that the new Clarkson chassis is identical with a standard 3-ton petrol machine with the exception of the power unit. Thus, when considering the all-important question of fuel cost, it is possible to obtain figures which are of real comparative value. On the road it has been found that the Clarkson 3-ton lorry will run a mile with a consumption of 5 lb. of coke; this with a full load. When running light the consumption does not exceed 3½ lb. per mile. As the present price of coke is 35s. per ton, the cost of 5 lb. of coke can be taken approximately at one penny. Moreover, on account of the increasing scarcity of all liquid fuels, the Coal Controller is desirous of encouraging the use of coke in every possible way, as there appears to be no likelihood of a shortage of that fuel.

Although primarily designed for commercial road vehicles, the field of usefulness of the Clarkson power unit is much wider. It appears to be well suited under certain conditions for light railways, branch line railways, etc., and interesting experiments in these directions may be anticipated. With the present labour difficulties there is so great a need for transport facilities that do not make further calls upon the inadequate liquid and coal fuel supply, that the utmost encouragement should be given to the rapid development of this coke-burning machine.

## GRANTS FOR LONDON OMNIBUS SERVICES.

### Statements in the House of Commons.

In the House of Commons on July 24 Mr. Gilbert asked the Minister of Munitions what were the grounds on which the London General Omnibus Company applied for a subsidy for their motor omnibuses in South-East London; whether the subsidy is paid yearly, half-yearly, or quarterly; whether it is paid on the total mileage run by the omnibuses per week, including Sundays, or if it is only paid on the estimated mileage run when carrying munition workers; can he state if the omnibuses have to give preference to the munition workers on all routes over all other passengers; and can he give any estimate of the total number of munition workers carried on the various omnibus routes since the subsidy has been paid?

Mr. Kellaway: The original agreement with the London General Omnibus Company provided that the services in the Woolwich area should be supplied without charge to the Ministry, and it was only when the company stated that they were unable to continue these services without the aid of a subsidy that terms were arranged. The company renders quarterly statements of account. As stated by the present Minister of Blockade in his reply to my hon. friend on June 18, the amount of the present grant is based on the difference between the average earnings per mile of the omnibuses in the South-Eastern area, as compared with the average earnings of the omnibuses in the remainder of the metropolis, subject to certain conditions. The question of giving preference to munition workers was considered, and was found to be impracticable. The number of Arsenal and dockyard workers using the omnibuses is approximately 13,500 a day.

Mr. Watt: Are we to understand that no fares are charged on these omnibuses to munition workers.

Mr. Kellaway: Certainly not. Fares are charged. It is not a charity.

## COMPRESSED GAS TRACTION FOR OMNIBUSES.

### A NOVEL SYSTEM DESIGNED BY THE LONDON GENERAL OMNIBUS COMPANY.

The London General Omnibus Company are among the largest civilian consumers of petrol in the country, for they carry hundreds of millions of passengers per annum by the aid of that fuel. The war scarcity of petrol, not to mention its high price, has, of course, given them great difficulty. For a long time they have been experimenting with various alternative fuels, and they have invited suggestions and ideas from inventors both as to fuel and as to the best method of utilising it. As a result of their investigation the engineering staff of the company have come to the conclusion that the only real alternative fuel available is coal gas. Both from a commercial and traffic point of view it was not possible to carry large gas bags on the roofs of the omnibuses, as this would do away with the outside seats for passengers. Moreover, apart from the question of the outside passenger seats, a fabric container for gas at or about atmospheric pressure would on the roof of an omnibus give a total height which would be impracticable. An accompanying drawing gives the appearance of an omnibus if fitted with a bag to contain sufficient gas for a run of about 25 miles.

Under such conditions the only alternative was to employ compressed gas carried in metal cylinders. This plan having been decided upon, the company's engineers set to work to evolve an equipment which would be practicable, convenient, and safe. On the latter point they had, of course, to satisfy the stringent requirements of the metropolitan police authorities. So far, at least, as this country was concerned, there were not many precedents to help. Years ago, as some readers may remember, a compressed gas system was used on the Blackpool and Lytham Tramways, and down to the present day compressed gas is still employed on the Neath Tramways. In the former case the use of gas was abandoned long before the petrol engine was invented, and the gas engine then employed produced serious vibration. In both instances the undertakings were small, while the individual vehicle was much larger than an omnibus, thus giving more space for the apparatus. The question of space, and also London conditions calling for considerable endurance on each charge of gas, pointed moreover to the employment of a much higher degree of gas compression than had previously been used for such purposes. The experimental, designing, and testing work having now been completed, 20 of the company's omnibuses are being equipped for gas traction. Should the results prove as successful as there is every reason to expect, many more of the company's vehicles will be converted. The following description and illustrations indicate clearly the ingenious character of the equipment, which, it may be added, is being patented by the company.

As will be seen from the accompanying drawings, the compressed gas cylinders, which are charged to a maximum pressure of 1,100 lb. per sq. inch from a Reavell compressor, are placed under the longitudinal seats of the lower deck, and are completely cased in. At first four cylinders were used, but the design adopted provides for only two—one under each seat, and of greater size. A pipe underneath the body connects the two cylinders. The latter are connected in parallel to a main reducing valve by a pipe of three-eighths in. internal

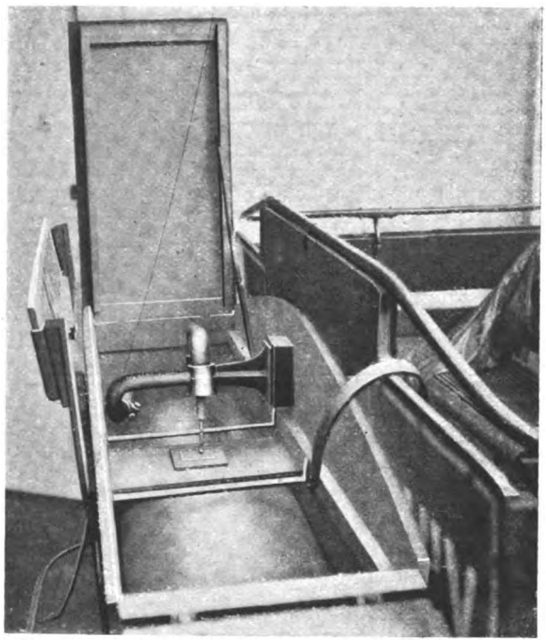
bore. The main reducing valve is a combination of a cut-out and diaphragm valve. The high pressure gas, after being reduced to approximately 2 lb. per sq. inch, passes through a secondary control valve into a flexible container which performs the double function of an expansion chamber and diaphragm for actuating the control



**Low Pressure Control Valve.**

valve. The gas is carried from the expansion chamber by a pipe line, $\frac{3}{4}$ in. external diameter, to a gas control valve connected to the carburetter of the engine.

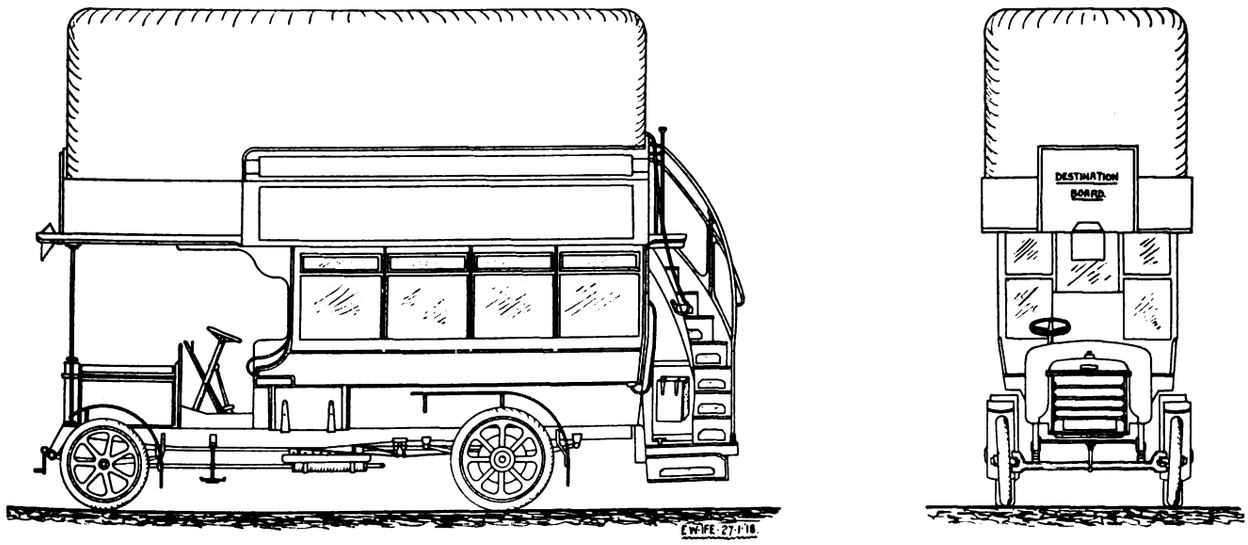
When the expansion chamber is fully expanded, it actuates the valve spindle of the secondary control valve, cutting off the supply which is diverted through a by-pass pipe into the diaphragm chamber of the reducing valve. This cuts off the main high pressure supply. Immediately gas is emitted from the engine control valve the expansion chamber becomes deflated, and releases the secondary control valve, which in turn releases the pressure on the diaphragm of the reducing valve and allows for the continuance of the supply from the high pressure storage. The whole system is thus entirely automatic, and calls for no manipulation or adjustment by the driver, who has merely to operate the foot pedal used in conjunction with the ordinary petrol carburetter. In case of emergency a small anxiliary petrol tank is fitted, and the standard petrol carburetter is retained. To change over, it is merely necessary to engage a small sliding dog to whichever throttle lever it is required to operate for running the engine on either liquid or gas fuel.

The distinguishing feature of the equipment is that it is a combination of the high-pressure and low-pressure systems. While introducing the gas at high pressure and passing it out at low pressure, a means of expansion is provided which is very necessary after compression.

To come to details of construction, each compressed gas cylinder is of 9 cubic feet capacity, giving a storage of just over 600 cubic feet at a pressure of 1,000 lb. per sq. in. Thus each omnibus will carry gas which at normal pressure would occupy 1,200 cubic feet. This is sufficient for 20 omnibus miles. The cylinders are tested to 4,000 lb. per sq. inch by hydraulic pressure, so that there is an ample margin of safety. They are of original design, and have been schemed out on principles consistent with general engineering practice. The body of the cylinders is of drawn copper tubing, 10 in. in diameter and 9 ft. in length. The copper body is fitted with steel end-plates which take the form of a spigot and faucet joint, making a cramping joint on a radius formed on the ends of the copper tubing. The end-plates are supported by longitudinal steel stays held in place by steel nipples which have a conical jointing. The outside of the cylinder body is wound with three layers of gun-steel tape, three-sixteenths in. by one-sixteenth in. section, put on under high tension on the same principle as gun winding. The object is to prevent bulging or sectional bursts. Any tendency to distort the cylinder under pressure will be in the form of elongation, the resistance to which is provided by the series of longitudinal steel stays. It is anticipated that copper tubing for the bodies of the cylinders will be replaced by steel tubing when war conditions have so relaxed as to enable the latter to be procured. The advantage of this will be the reduction of the elongation effect on the body, and consequent reduction of tension on the stays. There will also be a slight reduction in weight.

It is also to be noted that the valves embodied in the system have been carefully designed to perform the functions found necessary with gas storage. To allow for free movement at very light pressures stuffing boxes on the valve spindles have been replaced by grease seals, and the sealing reinforced by rubber rings inserted in the under side of the valve body.

Attention may be directed to the ingenious disposition of the apparatus, with the result that there is nothing in the way of external appearance to show that the omnibus is not an ordinary petrol-driven one. The reducing valve and the small petrol tank are under the driver's seat. The expansion chamber, which is a strong fabric container, is placed behind the usual front destination board above the hood. The box containing it is only about six inches wide from front to back. The bag is suspended in the box so that its weight has no effect on the automatic control of the gas supply.

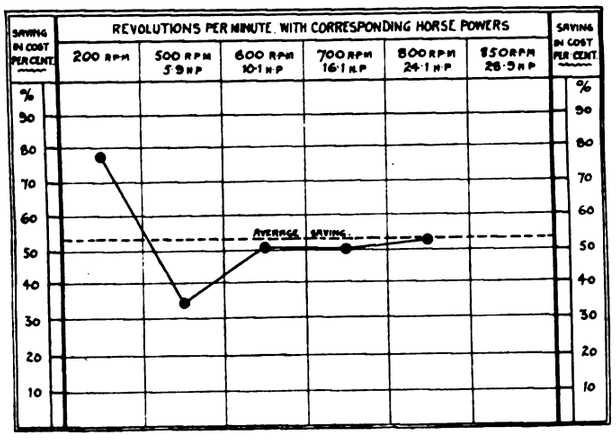


**Showing the Appearance of an Omnibus with Gas Bag Sufficient for a 25-mile Run.**

Digitized by Google

# MOTOR TRAFFIC.

For charging purposes it is proposed to instal at the Cricklewood depot of the company a Reavell compressor of a capacity of 15,000 cubic feet per hour, connected to a battery of storage cylinders of approximately 30,000 cubic feet capacity, controlled by a hydraulic accumulator. The storage cylinders will be connected in parallel and cased in concrete. The hydraulic accumulator is employed to keep the pressure constant. The battery will be connected to a pipe line which will carry a series of charging pipes, from which several omnibuses can be charged at one time. This arrangement is shown diagrammatically in an accompanying drawing.



The change from petrol to gas power is being accompanied by a change in the method of lighting the omnibuses so converted. In general the company's vehicles are lit electrically, and for this purpose each omnibus is provided with a small electric generator driven off the flywheel of the engine, and with a storage battery. The weight of this apparatus is about 300 lb. The gas-driven omnibuses will be lit by gas, and the apparatus will weigh only 22 lb. Gas from the high-pressure cylinders is reduced to 10 lb. per sq. in. by means of a reducing valve and governor. Each omnibus has seven incandescent gas lights, the mantles being enclosed in silicoe shades. There are two burners in the driver's cab throwing light into the interior of the omnibus; one is carried on the canopy of the driver's cab to illuminate the route number and the names of the destination points; two are on the dash-board; one is at the rear above the conductor's platform for illuminating the interior of the vehicle; and finally there is the red tail lamp. The gas is controlled by an injector system, which maintains uniformity of pressure and light, and the results are expected to be very good.

It was only after a long series of experiments and trials that an omnibus fitted on the system which has been here described was inspected and tested by the representatives of the Commissioner of Metropolitan Police. The accompanying diagrams give the results of various tests and are self-explanatory. The hill-climbing tests were made on gradients as steep as 1 in 9. It was demonstrated that the power obtained from the engine on this system with gas fuel was equal to that obtainable when petrol fuel is employed. It was also shown that it was impossible to exhaust the supply system when the maximum engine output was being developed. The high-pressure system kept up the supply as required. This disposes of the idea that less power can be got from gas fuel than from petrol.

It will thus be seen that there is every prospect of a thoroughly satisfactory system of gas propulsion for omnibuses. In appearance the vehicles, both externally and internally, are practically indistinguishable from the petrol-driven variety. The feed of gas is quite automatic. There is no additional mechanism for the driver to handle. The charging is even easier and quicker than the filling up of petrol tanks. The power is all right, and there is every prospect that reliability as proved by the test of time will be satisfactory. It cannot be expected that scarcity of gas will ever reach a point equal to the scarcity of petrol, and in any case the gas system is an addition to the existing method of petrol driving. Petrol omnibuses will still run, and there should be the more fuel available for them when a considerable number of the company's vehicles are running on gas.

The practical application at the present time of compressed gas to omnibus working is a valuable addition to national resources, and the London General Omnibus Company are to be congratulated on the successful results obtained from the painstaking and systematic investigations carried out by their engineering staff.

## ELECTRIC OMNIBUSES FOR RIO JANEIRO.

The Brazilian Traction, Light and Power Company have obtained from the Commercial Truck Company, of Philadelphia, some electric accumulator omnibuses to be used on routes not served by their tramways in Rio Janeiro. According to particulars given by the *Electrical World*, of New York, the omnibuses are of the single deck type and have a seating capacity for 32 passengers. The vehicles are equipped with an Edison battery of 72 cells, with a rated capacity of 350 amperes hours. General electric motors are placed on each of the four wheels, the drive being through concentric gearing with a ratio of 12·14 to 1. With a full load on good level roads the vehicle can run thirty-five miles on a single charge, and with half the full complement of passengers, forty miles. Each omnibus can make twelve round trips of 2·26 miles during the day, giving a total daily mileage of 27·12, the running time being four hours, or twenty minutes per trip, with a total of twenty-four stops. During the tests the power consumption worked out at 294 ampere hours, the initial voltage of 89 dropping to 73 at the completion, the running time being 3 hours 59 minutes. At the start the battery temperature was 100° F., and at the finish 105° F., the air temperature being steady at 58° F. The omnibuses were run from Philadelphia to New York, a distance of about 150 miles, under their own power. On the first car the vestibules were packed on the chassis for shipment, the main bodies being packed in crates carried on the second chassis.

## ASSOCIATION OF BRITISH MOTOR AND ALLIED MANUFACTURERS.

ITS VALUE TO THE MOTOR INDUSTRY.

Mr. Edward Manville was the guest of the evening at a dinner given by the Association of British Motor and Allied Manufacturers, at the Royal Automobile Club, on Wednesday, July 10. Mr. Manville, in addition to his numerous other important services to the motor industry, has until recently served as president of the A.B.M.A.M. He has lately been appointed president of the Association of Chambers of Commerce of Great Britain.

Mr. H. C. B. Underdown, the new president of the association, in proposing Mr. Manville's health, reminded his audience of the long period during which Mr. Manville had been a recognised head of the motor industry. He felt that Mr. Manville could congratulate himself upon what the association, under his presidency, had been able already to achieve, and had fitted itself to achieve in the future. He considered that all connected with the motor industry might well be proud of its achievements in the war. In spite of the difficulties and dangers which confronted the industry, he was optimistic as to the future. The motor industry was entitled to a considerable degree of support from the Government. The recently-issued report of Lord Balfour of Burleigh's committee showed a welcome recognition of this. He wished to sound a note of warning. On all sides one heard the cry for large outputs and a high degree of standardisation. Both were desirable, but they must not sacrifice quality to quantity. It was quality of manufacture which had made the British motor industry what it is.

Mr. Manville in his reply drew attention to the youth of the industry, and its early and successful efforts to organise itself. This organisation was rendered necessary by the difficulties which were put in the way of the use of mechanically-propelled vehicles. The first matter of importance was to overcome these difficulties, and this was work for manufacturers and traders of all nationalities. It had only comparatively recently become necessary to create a representative organisation to look after the British manufacturers' interests alone. Unfortunately in the past the Government had not assisted their industry to move in the van. They recognised now that the country must support its own industries and its own labour. Therefore the association of British and Allied Motor Manufacturers had been formed. Many good results had followed this development, which had been admirably supported. This association probably represented a greater percentage of the whole industry than any similar organisation formed in any other British industry. This fact was already realised by the Government, which showed a marked inclination to deal with the industry through its association. At least one department had taken this association as its model in defining the procedure to be adopted with regard to important problems connected with the rehabilitation of industry. With regard to the future, he shared the President's optimism. The general mental attitude was now fluid. There should not be the same difficulty as there was in the past in convincing people of the need of changing their methods. There should therefore be an immense demand for motor vehicles, especially with a view to the increase in efficiency of transport and business methods. It was a good omen for the future that the industry now receives the very active support of comparatively young men to whose hands its future could be safely entrusted.

Subsequently Mr. Bernard Caillard, the vice-president of the association, emphasised the need for pulling together, and Mr. Pullinger asked for due recognition of the technical side of the industry.

## MUNICIPAL OMNIBUS EXTENSIONS.

POWERS GRANTED TO SHEFFIELD AND MORECAMBE.

The Local Legislation Committee of the House of Commons have passed the proposals in the Sheffield Corporation Bill to enable the Tramways Committee to run motor omnibuses to Catliffe and Treeton, to Chapeltown, High Green, and Grenoside by a continuation of the Ecclesfield service, and to Eckington by an extension of the Mosborough service. Opposition to the first and second proposals was offered by Rotherham Corporation, but ultimately the objections were withdrawn. Clauses were inserted in the Bill for the protection of West Riding County Council, Derbyshire County Council, and Chesterfield and Wortley Rural Councils.

After withdrawal of the clause to permit the running of omnibuses outside the borough, the Morecambe Corporation Bill has been passed as an unopposed measure, the Lancashire County Council having withdrawn their opposition.

## TRANSPORT ACROSS LONDON.

ONE MILLION SOLDIERS ON LEAVE CARRIED BY THE MOTOR VOLUNTEER CORPS.

Since the formation of the City of London Motor Transport Volunteer Corps (Group 11), in February, 1915, to provide free conveyance across London for soldiers on leave, coming from or returning to France, over a million men have been so transported. The service thus rendered has been an immense boon to the gallant fellows, many of whom have since found a hero's grave, or have been incapacitated by wounds or sickness. The maximum number transported on any one night is 6,320. With their 90-lb. loads of kit, ten men go to the ton. Consequently the million men carried means transport of 100,000 tons. The actual carrying cost alone is given at 3d. per man. The personnel numbers 571, and the corps has available 73 commercial vehicles, 143 cars, and 45 sidecars. The corps property in vehicles comprises 12 lorries, 2 vans, and 8 cars. To augment the service the War Office is about to hand over 20 3-ton lorries. Five of the lorries were presents from the United States through the active work and organisation of Lady Lister-Kaye, wife of the O.C. The donors were the City of New York, Lieut. J. Cromwell, of Philadelphia, the City of Newport and Rhode Island, the State of California, and the City of Washington. A lorry was also presented by the Corporation and people of Glasgow and the West of England. It is urged that this example should be followed by other parts of the country, notably Lancashire, Yorkshire, and the Midlands, whose men benefit so largely from the service. The Imperial Tobacco Company, the Mincing Lane merchants and brokers, the Corn Exchange, Mrs. Angus, and Mr. Solly Joel also have made gifts of lorries, the last endowing his to the extent of £400 per annum. The corps, of which Major Sir John Lister-Kaye is the commandant, depends for its income entirely on subscriptions from the public, in money or in kind. The Earl of Cottenham is adjutant, and the Earl of Chesterfield chairman of Finance Committee.

## WAR'S EFFECT ON THE A.A. & M.U.

Presiding at the annual meeting of the Automobile Association and the Motor Union, on July 9, Mr. Joynson Hicks, M.P., mentioned that although a large number of new members had been elected during the year, the organisation had suffered in membership during the four years of the war. When it again became possible to use cars, no doubt members would return. The income had been reduced by £10,000, and the expenditure by £13,000. During the year they had carried down to reserve £24,374, and the reserve fund had now reached such a total that when the war was over no motor organisation would have such a fighting fund ready to set to work in the interests of motoring as this organisation would possess. Motorists were now using their vehicles for the benefit of the community and to help the country in time of need. In this connection he read the following letter received from Sir J. Cadman, chief of the Petroleum Executive :—" Mr. Long would be much obliged if you would, on the occasion of the annual meeting of the Automobile Association, take the opportunity of thanking the motoring community for the sacrifices which they have so willingly made in the national emergency."

In referring to the bad condition of the roads, the chairman said that prior to the war they were proud of the roads, for none were equal to the best English roads. They were now cut up by military traffic. The association was determined that the roads be taken in hand and repaired as soon as possible after the cessation of hostilities. Motorists had been taxed very largely in order to establish a fund for the improvement of roads. When the war was over they would see that this fund was re-diverted for the purpose for which it was obtained.

Before the war they were in the hands of a petrol monopoly, which had grown more strict during the war. The executive committee of the association intended to encourage the production of benzol and the use of coal gas, and it was hoped that the Government would not stop their present experiments with regard to fuel suitable for motor traction after the war. In time of war taxation of luxury was justifiable, but it was a very grave question whether a motor car was a luxury. As cars were used to-day, he was of opinion that they were not luxuries. The views of the executive committee had been put very strongly before the Select Committee on Luxury Duty.

WOMEN'S WAGES AT BRADFORD.—Bradford Corporation have decided that the women tramway employees shall be given an advance of 3s. a week. This follows on the recent award made by the Committee on Production granting an advance of 5s. a week to men employees.

# MOTOR TRAFFIC.

## A QUESTION OF EXTRAORDINARY TRAFFIC.

ALLOWANCE TO LOCAL AUTHORITY FOR ROAD REPAIRS.

A question of extraordinary traffic in roads was the subject of an action in the Chancery Division of the High Court recently. The plaintiffs were Weston-super-Mare Urban District Council, and the defendants Messrs. Henry Butt and Company, Weston-super-Mare, quarry owners. The action, which extended over thirteen days—at the end of June and the beginning of July—was heard by Mr. Justice Eve, who delivered a reserved judgment on July 31. Counsel in the case were—for the plaintiffs, Mr. Macmorran, K.C., and Mr. J. Scholefield, and for the defendants, Mr. Maugham, K.C., and Mr. W. A. Jowitt. Plaintiffs claimed from the defendants £1,750. the amount of expenses incurred in repairing certain roads which they alleged were damaged by the extraordinary traffic of the defendants. Alternatively the plaintiffs claimed for damages for nuisance. The defendants denied liability, and said that the traffic which they had placed on the roads was not extraordinary.

His Lordship, in the course of his judgment, of which a full report was given in *The Times* of August 1, said that the defendants did not dispute that they were the persons by whose order the traffic was conducted, but they denied that it was extraordinary. Among other defences they raised one which involved the question whether ordinary traffic over a highway became extraordinary when the method of transport was so altered as materially to increase the cost of repairing the highway, or, in other words, was the increased cost due to the alteration in the mode of transport recoverable under Section 2 of the Highways and Locomotives Amendment Act, 1878, from the persons so using the highways, or did the obligation lie upon the highway authority to render the highway capable of sustaining the new method of transport without excessive wear and tear? The question was not capable of an answer applicable to all circumstances.

Coming to the facts, his Lordship said that down to August, 1913, the stone and lime brought from the defendants' quarry and the coal carried thither were transported in horse-drawn carts and wagons of a maximum weight of three tons or thereabouts. The total weight so drawn was large. Along the Bristol Road during the year ended March 31, 1913, it amounted to 13,524 tons, of which 12,108 tons passed also over Arundel Road. In August, 1913, the defendants began to use a steam wagon and trailer, and in the year ended March 31, 1914, when there were drawn over the Bristol Road 25,645 tons, of which 22,347 tons also passed along Arundel Road, 6,838 tons were transported over both roads by steam traction. In the year ended March 31, 1915, the total increased to 27,000 tons, of which 13,119 tons were carried by steam over both roads, and in the year ended March 31, 1916, when the total fell to 22,905 tons, there passed along the Bristol Road 15,046 steam-transported tons, of which 14,736 tons passed also over the Arundel Road. In January, 1916, a second steam wagon had been added.

TWO QUESTIONS.

On these facts the questions arose:—(1) Did the defendants impose extraordinary traffic on these roads where they adopted steam traction? and (2) if so, had that traffic ceased to be extraordinary and so far become ordinary traffic in the early part of 1916 as to impose on the plaintiffs the obligation of providing roads adequate to carry it? Although the answer to each question involved a finding of fact, there were authorities binding on him which indicated clearly what these findings ought to be. In Hill v. Thomas ([1893] 2 Q.B., 333) the Court of Appeal said that extraordinary traffic denoted a carriage of articles over a road at either one or more times which was so exceptional in the quality or quantity of the articles carried or in the mode or time of user of the road as substantially to alter or increase the burden imposed by ordinary traffic on the road, and to cause damage and expense thereby beyond what was common.

Proceeding, his Lordship said that an elaborate census of the traffic passing along the Bristol Road during the 25 weeks between May 1 and October 23, 1916, showed that the carriage of concentrated weight over the road was still exceptional, and virtually confined to the defendants, and in these circumstances it could not have ceased to be extraordinary traffic and become ordinary traffic between 1913 and 1916. There existed from August, 1913, conditions capable of giving rise to a claim under the statute of 1878. On February 19, 1917, the plaintiffs' surveyor certified that extraordinary expenses within Section 23 had been incurred by reason of damage to each of the roads, and on February 21 the writ was issued.

A LIMITED LIABILITY.

The object of Section 23, said his Lordship, was to ensure that a person using a highway for exceptional purposes should pay for any damage caused thereby, but by Section 12 of the Locomotives Act, 1898, the liability was qualified by an important limitation in that the action to enforce the statutory remedy must—with certain exceptions—be begun within twelve months of the time when the damage was done. The true effect of this limitation was that the authority could only recover for so much of the damage as was done within the twelve months preceding the issue of the writ, and if the injury had been going on for a longer period it became necessary to ascertain how much of the expense was properly attributable to those twelve months. He thought that as a result of the authorities it might be accurately said that *prima facie* the measure of damages was the difference between the sum expended in repairing the particular highway during the year, and the average sum expended on it in previous years. But obviously that could only be the *prima facie* method for ascertaining the damages, as there might have co-existed with the extraordinary traffic for which the action was brought the traffic and causes contributing to the necessity for increased expenditure, and the Legislature could not be presumed to have intended to impose on the person responsible for the extraordinary traffic any liability for increased expenses due to other causes.

THE CONCLUSION.

Considering plaintiffs' claim for each of the roads, his Lordship gave judgment for the plaintiffs for sums amounting in the aggregate to £280. His Lordship added that no case of nuisance had been made out. Not a single accident to any person had ever been reported, nor had any witness said that he was prevented from using either of the roads by its dangerous condition except one, whose evidence came to no more than that his chauffeur did not drive down Arundel Road because it was not safe. The plaintiffs had wholly failed to make out their allegations of excessive speed. Therefore the action failed on that issue, and he proposed, in giving judgment for the plaintiffs for £280, to order the defendants to pay the costs of the action excepting so far as they had been increased by the issue raised in paragraph 2 of the prayer of the claim, and to order the plaintiffs to pay the defendants' costs, so far as they had been increased by that issue, with the usual directions as to set off.

## COMPRESSED GAS FOR OMNIBUSES.

### GAS TRACTION COMMITTEE'S ANNOUNCEMENT.

The Gas Traction Committee (the Petroleum Executive, 12, Berkeley Street, London, W.1) have announced that the following arrangements have been made, pursuant to Section 17 of their interim report, in respect of the Metropolitan area:—

(1) The Commissioner of Police of the Metropolis has approved the issue of licences for 20 motor omnibuses equipped to run on compressed coal-gas;

(2) The necessary authority has been obtained to conduct trials with 20 goods-carrying commercial motor vehicles equipped to run on compressed coal-gas;

(3) The Petrol Control Department of the Board of Trade has sanctioned the issue in due course of the requisite gas permits;

(4) The Coal Controller has concurred in respect of an agreed maximum total volume of gas on the understanding that the supply might have to be cut off during the winter months if the exigencies of the gas position demands this course.

Section 17 of the report referred to above reads as follows:—

It is desirable to encourage forthwith, under special licence from the Board of Trade where necessary, a limited number of experiments on a commercial scale with compressed gas in rigid metal cylinders, plain or wire-wound, at pressures up to at least 1,800 lb. (120 atmospheres) on the square inch, in connection more particularly with certain of the larger motor omnibus undertakings and the transport departments of certain of the more important municipal authorities, in order to obtain data for dealing with this post war development.

Mr. G. J. SHAVE, of the London General Omnibus Company, Limited, has been added by the Gas Traction Committee to the expert sub-committee which is considering the use of gas for traction.

Mr. FIELD, sales manager of Commercial Cars, Limited, Luton, has been appointed to the Advisory Committee of the Road Transport Board for the Eastern Area. Mr. Field's experience in connection with Commer cars should be of exceptional value in the work of the Committee.

Mr. ALBERT BROWN, of the well-known firm of Brown Brothers, Limited, Great Eastern Street, London, motor factors, has been elected President of the Society of Motor Manufacturers and Traders. For many years Mr. Brown has occupied a leading position in the motor industry, having been vice-president of the Society for some time past and also president of the Motor Trade Association and the Cycle and Motor Trades Benevolent Fund.

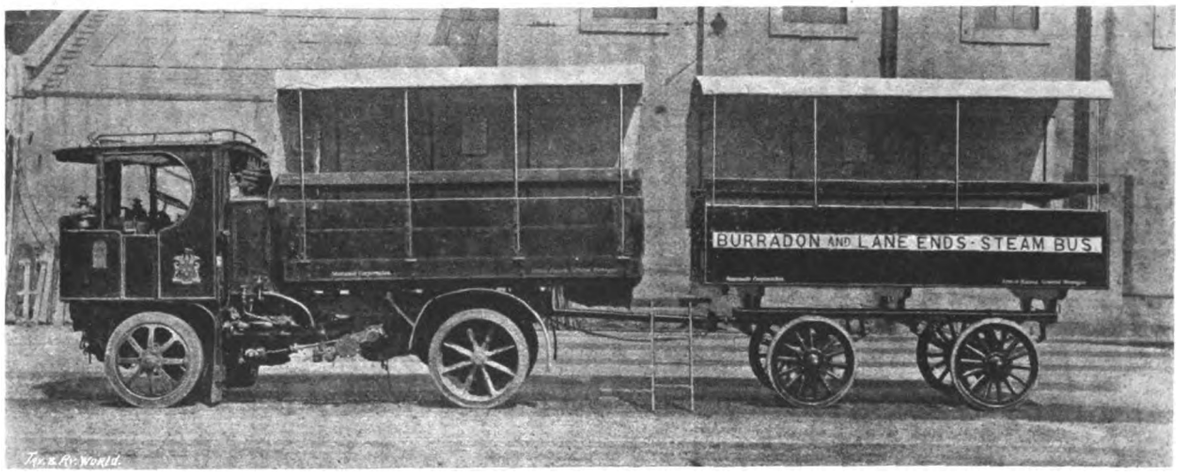
## STEAM WAGON AS AN OMNIBUS.

NEWCASTLE MINERS CARRIED AT LOW COST.

Newcastle's teeming population has often benefitted from the inventive genius of Mr. Ernest Hatton, the general manager and engineer of the Corporation tramways and motor omnibus undertakings. Among his innovations, designed to meet the great increase of industrial traffic along the banks of the Tyne, was the conversion of single-deck tramway cars into conveyances for standing passengers only. This successful move has already been described and illustrated in these columns.

The most recent contribution of Mr. Hatton's ingenuity to the urgent demands for local transport is shown in the illustration above of an old-type "Sentinel" steam wagon which has been transformed into an omnibus, and is used for drawing a trailer. Both vehicles are utilised for the transport of the population of a district inhabited principally by miners. Although their use is needed only at week ends, the vehicles have been running long enough to render specially notable the low cost of fuel as against petrol, even at the pre-war price.

Mr. Hatton has taken this step entirely as a war measure, rendered necessary by the difficulty or impossibility of obtaining any other kind of vehicle, and his resource may prove useful to managers of other traction undertakings who may have one of the machines of the Sentinel Wagon Works, Limited, or any other steam wagon that can be spared one or two days per week from its accustomed industrial use.



## RESTRICTION ON TAR SPRAYING.

In many London and provincial districts there has been unrestricted use this summer of tar for the spraying of the roads. According to the Road Board this is "contrary to the conditions of the sanction for the use of tar." This announcement was made by the Board in answer to a request from Islington Borough Council for the supply of tar to be used for spraying three macadamised carriageways used by motor omnibuses.

The communication from the Board continued :—"Owing to the quantity of tar available for road purposes during the present year being very much restricted, its use is only permitted on roads which are of national importance. The unrestricted use of tar on unimportant roads in London areas is likely to raise serious questions between the Board and the Ministry of Munitions under whose licence permits are issued, and the Board must ask you to be good enough to immediately stop the use of tar on roads which are not subjected to traffic of military or commercial importance, and to reduce the quantity allowed under licences granted to the absolute minimum. Tar must not be used merely for the amenities of dustlessness."

FIRST AID INSTRUCTION is now being given to women conductors of the London General Omnibus Company. Such instruction has previously been given to men only, but it has been found women conductors can be relied upon to make effective use of similar training.

## MOTOR VEHICLES FOR MUNICIPALITIES.

CUPAR CORPORATION has decided to purchase a steam motor tractor.

NEATH RURAL DISTRICT COUNCIL is about to purchase a steam wagon for use in the highways department.

WORTHING CORPORATION has failed to obtain a priority certificate for the purchase of an electric refuse collecting van.

STOCKTON RURAL DISTRICT COUNCIL has received the sanction of the Local Government Board to purchase a steam wagon.

WORCESTER CORPORATION has approved of the suggested purchase of another motor wagon for use in the electricity department.

HAMPSTEAD BOROUGH COUNCIL has purchased a Ford van for use in connection with the National Kitchens established in that area.

STIRLINGSHIRE COUNTY COUNCIL has under consideration the question of steam haulage. A committee has been appointed to deal with the matter.

ILFORD URBAN DISTRICT COUNCIL has given instructions to the engineer to inquire into the relative merits of steam, petrol, and electric vehicles, and to bring up a report thereon.

FINCHLEY URBAN DISTRICT COUNCIL has under consideration a recommendation from its Public Health Committee for the purchase of a motor car for the use of the medical officer.

SHEFFIELD CORPORATION has approved of an arrangement proposed by the Health Committee whereby two British-built electric chassis are purchased instead of those on order.

CORNWALL COUNTY COUNCIL at its last meeting adopted a report from the Finance Committee recommending the purchase of a motor car for the personal use of the County Surveyor, at a cost of £350.

NORFOLK COUNTY COUNCIL has received a report from the County Surveyor to the effect that he has satisfied himself that steam haulage is far more economical and expeditious than horse haulage.

HOVE CORPORATION has accepted the tender of Thos. Tillings, Limited, for the supply of four steam wagons at a charge of £4,293 for one year. This charge represents an increase of 15 per cent. upon the old contract rate.

SOMERSET COUNTY COUNCIL has under consideration a report from the County Works Committee on the question of reconstruction and transport. Included in this report are the replies from the District Councils suggesting the provision of a number of road motor services.

WESTON-SUPER-MARE URBAN DISTRICT COUNCIL has for some time past had under consideration the purchase of a motor fire engine. The Surveyor has now to make inquiries as to the possibilities of securing a suitable machine, and bring up a report at the next meeting of the Fire Committee.

GLOUCESTER CORPORATION has been considering a suggestion from the Chief Constable that his work could be more efficiently performed if he were supplied with a motor car. The Finance Committee, however, is of the opinion that the present is not an opportune time for making a departure of that character, and recommend that the matter be postponed for twelve months. This view has been accepted.

# MOTOR TRAFFIC.

## MOTOR TRAFFIC NOTES.

HOUSING OF POPLAR MUNICIPAL MOTORS.—At a cost of £1,254 the Poplar Borough Council propose to erect a garage for their motor vehicles.

COST OF ENERGY FOR ELECTRIC VEHICLES.—In consequence of the increased cost of coal, etc., Walsall Corporation have raised the price of energy for electric vehicles by 20 per cent.

PETROL SHORTAGE AT SHEFFIELD.—Owing to the shortage of fuel and the difficulty of obtaining drivers, the Upperthorpe motor omnibus service of the Sheffield tramways has been discontinued.

SALE OF DISCARDED ARMY TIRES.—In the House of Commons, Sir Worthington Evans stated that the Ministry of Munitions were prepared to consider the question of the sale of old army tires for retreading if the price obtained would justify the expense of sorting.

PASS THAT PERMITS EXCESS SPEED.—At the hearing of a summons against the driver of a motor vehicle, heard in a London police court on July 4, it was mentioned that "Z" passes issued by the Government allow the holders to drive at a reasonable speed exceeding the legal limit of 20 miles per hour.

THE PIONEER SWEEPER.—Liverpool Corporation have purchased from Messrs. F. Walters and Company, Bilton, Rugby, the Pioneer simultaneous sweeping and loading machine that created so favourable an impression on the occasion of a demonstration during the recent London conference of the Municipal and County Engineers.

PUBLIC VEHICLE RESTRICTIONS.—No public vehicle constructed to carry more than six persons, including the driver, may in future be used for pleasure or other purposes, according to a Board of Trade Order issued on July 21. Exceptions are made in the case of public omnibuses running in the interests of the travelling public, the conveyance of hospital patients, and "cases of urgent necessity."

U.S.A. GOVERNMENT HIGHWAYS COMMITTEE.—At Washington there has been organised the Government Highways Committee. It is under the chairmanship of Mr. Logan Weller, director of public roads in the Department of Agriculture, and comprises representatives of the War Industries Board, the Fuel Administration, the Highways Transport Committee, the Department of Agriculture, and the Army Motor Transport Service.

OMNIBUSES ON TRAMWAY ROUTES.—Replying to a question by Mr. Gilbert in the House of Commons, Sir A. Stanley, President of the Board of Trade, stated that four omnibuses had been withdrawn from the Sunday service in the Croydon district, and nine in the Ilford district. The omnibus companies had been requested not to increase their services on tramway routes, where, to secure economies in the consumption of fuel, tramway services were reduced.

COMMISSIONER OF POLICE AND OMNIBUS QUEUES.—Kensington Borough Council have received a letter from the Commissioner of Police for the Metropolis stating that he is anxious to give a trial to the formation of queues for omnibus passengers. It is impossible, however, he states, to detail police to regulate the queues if such a system were carried out to any considerable extent, except by the augmentation of the force, which would entail additional cost to the ratepayers.

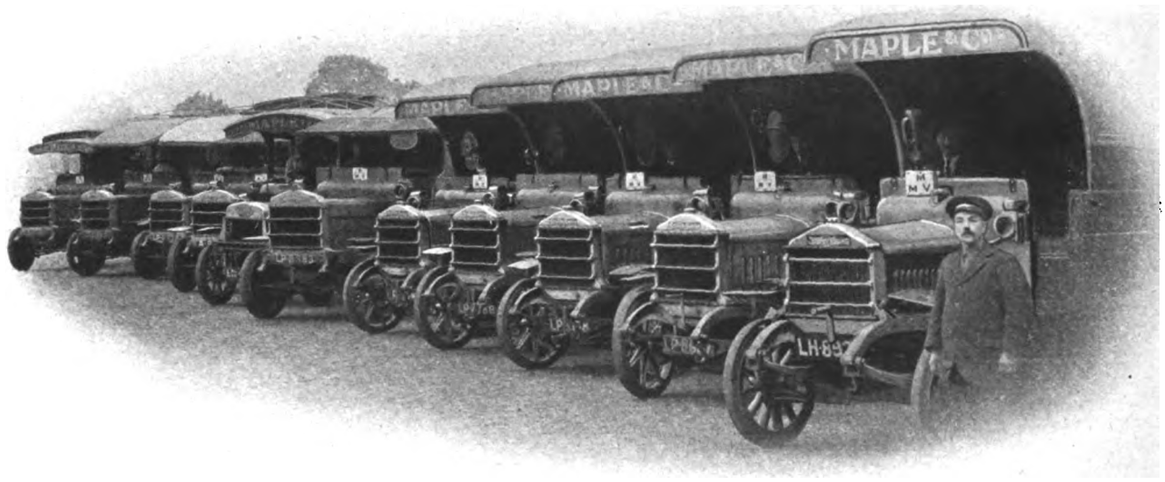
TRACTOR TRAINS LESS HARMFUL TO ROADS.—An interesting claim that might engage the attention of Colonel Crompton, the expert on motor vehicles and road wear, is advanced in connection with the inauguration of a Walter tractor train service between Detroit and Toledo. The tractors leave each city twice daily, and draw two 5-ton trailers. The operating company maintain that the tractor trains are less harmful to road surfaces than ordinary 5-ton motor trucks loaded, because of the even distribution of weight.

RAILLESS CAR AS A KITCHEN.—Halifax Food Committee have arranged with the Corporation Tramways Committee to equip a railless trolley vehicle as a travelling kitchen at a cost of £252. This step has been taken in consequence of the success that has attended the equipment of a tramway car as a kitchen for the supply of meals to the public. Owing to the shortage of fuel for propulsion, it is anticipated that considerable difficulty will attend the carrying out of the proposal of Alderman Spencer, the Director of National Kitchens, to utilise motor omnibuses in various towns for the same purpose.

## A FLEET OF STRAKER-SQUIRE VEHICLES.

A fleet of Straker-Squire vehicles illustrated on this page represent a portion of Messrs. Maple and Company's (Tottenham Court Road) fleet, lined up with their staff. The whole of these machines are on motor volunteer work, and are being used exclusively on work of the greatest national importance. They are accomplishing the most arduous work, including very long-distance runs, indeed there is probably no more severely worked fleet of machines in the metropolis. When motor vehicles were first introduced to the public some 18 years ago as a freight-carrying possibility, they were purchased experimentally in ones and twos, and as their value for fast traffic purposes became apparent, Messrs. Maple used their slowly accumulated experience of a variety of makes to single out the best types, as they revealed themselves particularly suitable for all-round work.

Situated as Messrs. Maple are, in the very heart and centre of London, and all their departmental chiefs being enthusiastic motorists themselves, the firm were in a particularly favourable position to examine the claims and reputation of every type of vehicle on the market, and to test it as to its suitability for arduous work.



**A Fleet of Straker-Squire Vehicles.**

MOTOR TRAFFIC AND ROAD MAINTENANCE IN VICTORIA.—A conference of inter-urban Councils held at Melbourne has decided to seek an amendment of the Country Road Boards Act in order to secure the following objects:—The Board to determine the proportion of motor and ordinary traffic on all declared main roads where extraordinary maintenance charges are incurred by reason of motor traffic; funds from motor fees to be applied to construction and maintenance of declared main roads for the benefit of motor traffic; motor fees to be increased to cover the road charges due to motor traffic; the maximum speed to be at the rate of 25 miles per hour.

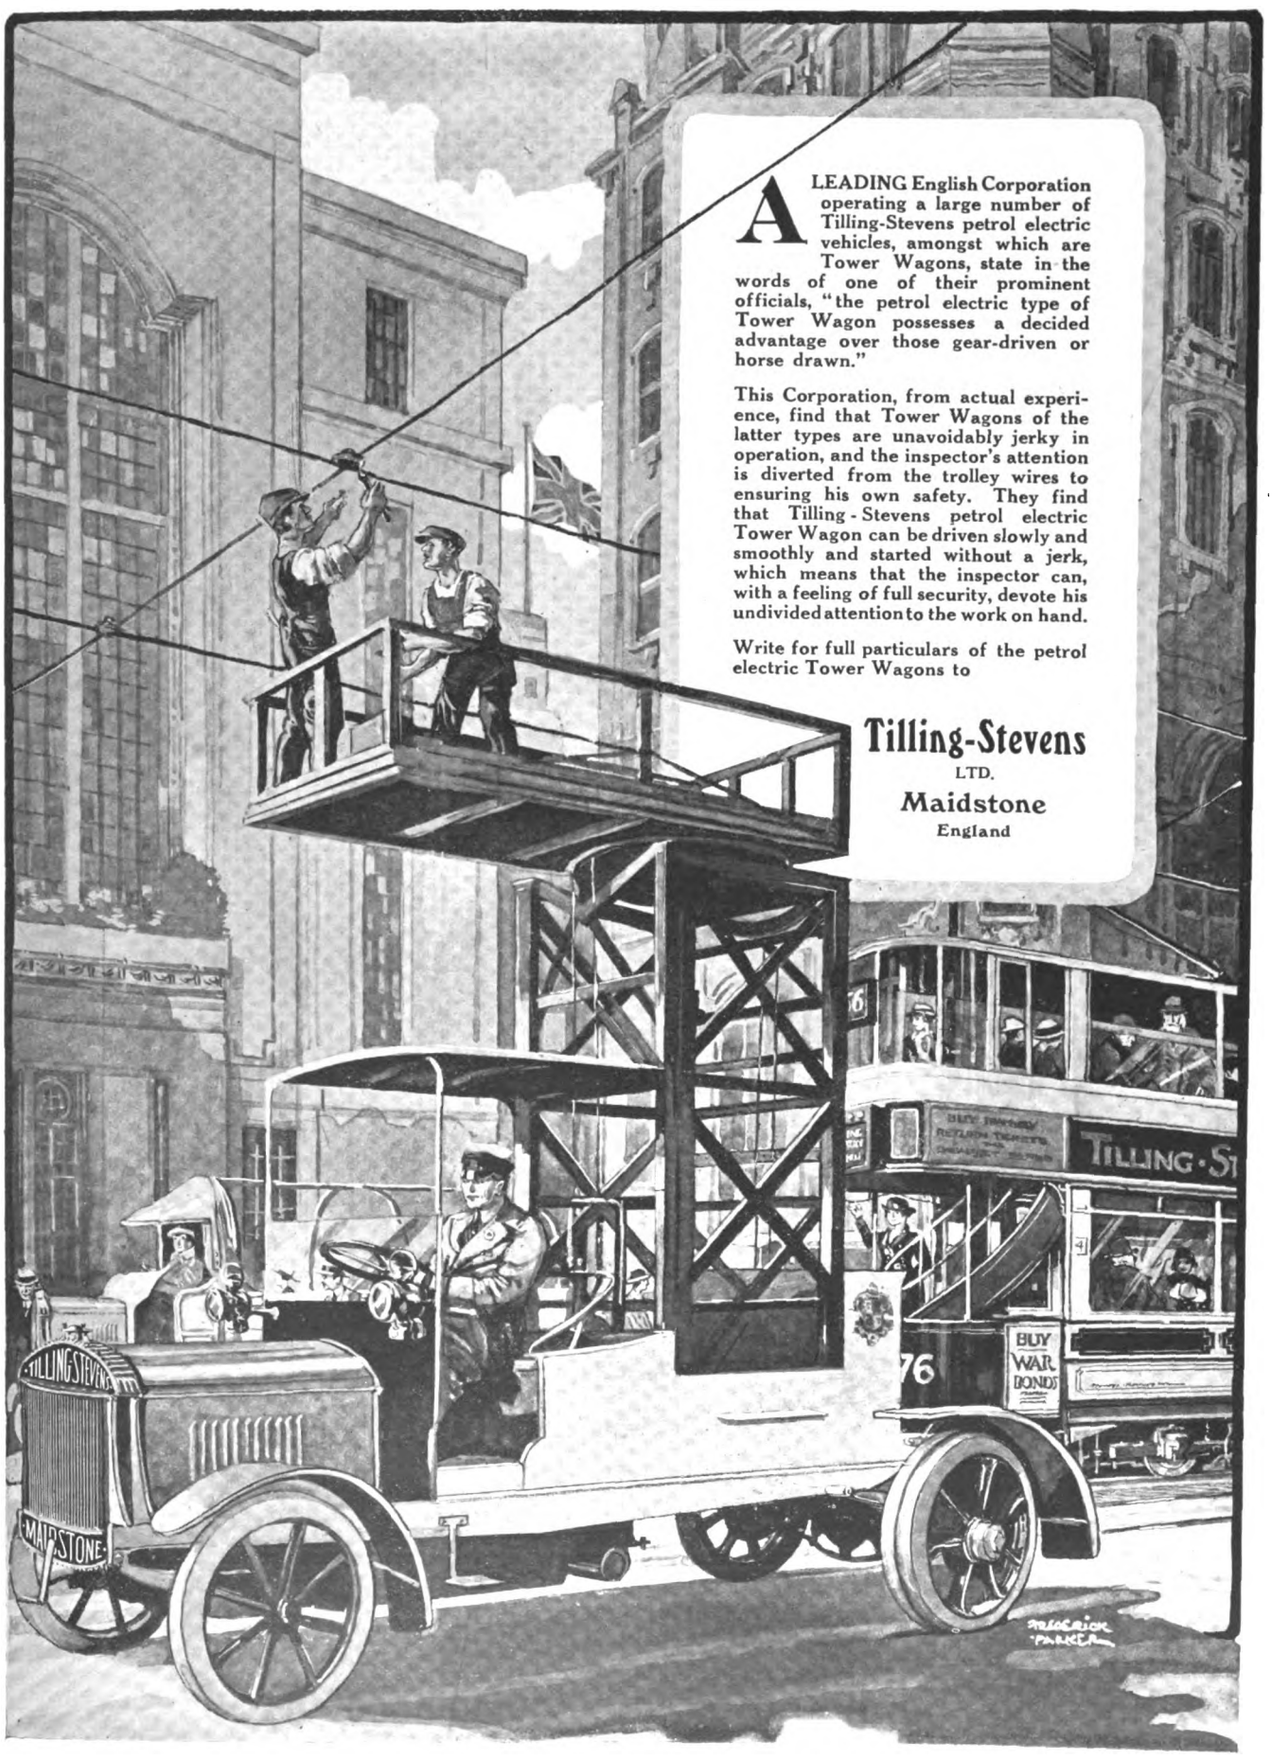
# TILLING-STEVENS
## Smooth Drive Tower-Wagon



A LEADING English Corporation operating a large number of Tilling-Stevens petrol electric vehicles, amongst which are Tower Wagons, state in the words of one of their prominent officials, "the petrol electric type of Tower Wagon possesses a decided advantage over those gear-driven or horse drawn."

This Corporation, from actual experience, find that Tower Wagons of the latter types are unavoidably jerky in operation, and the inspector's attention is diverted from the trolley wires to ensuring his own safety. They find that Tilling-Stevens petrol electric Tower Wagon can be driven slowly and smoothly and started without a jerk, which means that the inspector can, with a feeling of full security, devote his undivided attention to the work on hand.

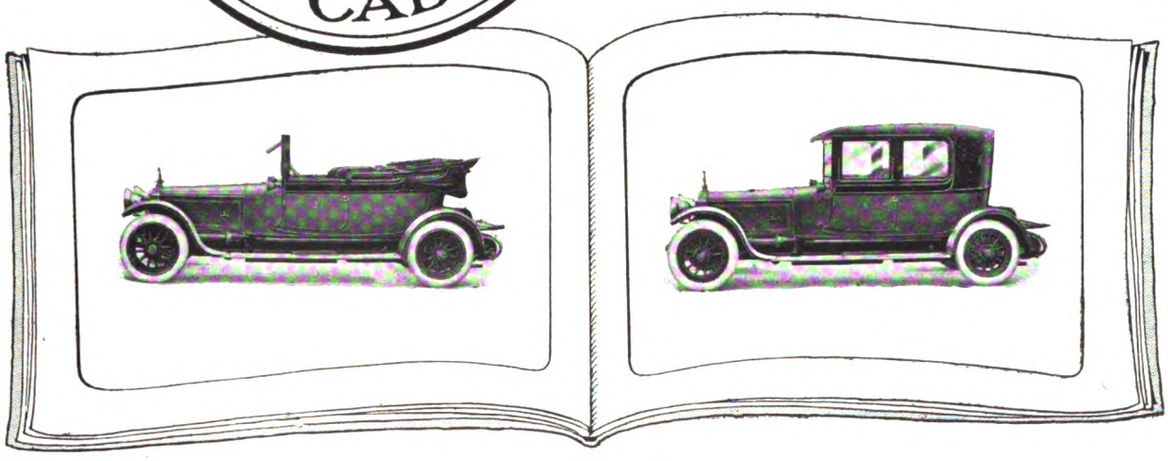
COUPE CABRIOLET

## Get this Brochure

### The Cole carriage is beautifully illustrated and fully described in its pages

The COLE is the original all-purpose Coupé—an open touring car or an enclosed limousine in five seconds through the Cole Patent Hood, the simple spring action of which instantly and mechanically raises or lowers the hood into position. Accommodates four people. Mounts all chassis from 12 h.p. to 50 h.p.



**WM. COLE & SONS LTD., 235 HAMMERSMITH ROAD, LONDON W.6**

THE USE OF THIS BADGE

is an indication that this Firm has been accepted as genuinely British by a Tribunal of Trade Competitors

## Insist on Efficiency

Proprietors and directors of large businesses would be well advised to insist on having the same high grade of efficient service from their motor lorries as required of specially-trained employees engaged on important work. The lorry having the greatest quality has the greatest efficiency.

**What the transport manager says:**

"TYRES? Oh! all on Dunlops. Our local agent, a very experienced man, recommended them first. We tried several in competition on one side of the same machine with other makes. Dunlops had it by thousands of miles every time. The men ask for them now, too. Fewer nuts to tighten, you know, and less engine trouble. Dunlops are so resilient. As for service; well, Dunlop agents and Dunlop stocks are everywhere, which just suits us with machines at branches in every part of England and Wales, Scotland and Ireland. Altogether we have found that for mileage, resiliency and service its best to fit the best—DUNLOPS."

**DUNLOP RUBBER Co., Ltd.,**

# ALLEN PISTON RINGS

## Best for All Types of Internal Combustion Engines

An exclusive and valuable feature of the Allen ring is the scientific method of stressing.

The whole ring is "stressed" in one simple and complete operation by a specially-designed machine tool.

This means a ring of perfect accuracy and absolutely correct fit.

Judge for yourself of its superior qualities by sending for a sample ring.

Enquiries specially invited from engine manufacturers and automobile engineers.

COVENTRY NOISELESS CHAINS

## The Shortage of Skilled Drivers

If you engage an inexperienced driver to run your lorry it is not improbable that he will one day throw in his clutch with all the vigour his inexperience prompts—strain the whole of your chassis—and do damage in your gear box that will take days to repair.

Make it impossible for him to do this by having the clutch lined with Ferodo fabric. It will then engage sweetly however violently applied—transmit maximum power from engine to back axle—never slip or seize. Ferodo fabric lasts much longer than leather or any imitations of Ferodo fabric, and will not burn out. It gives infinitely superior service at less cost.

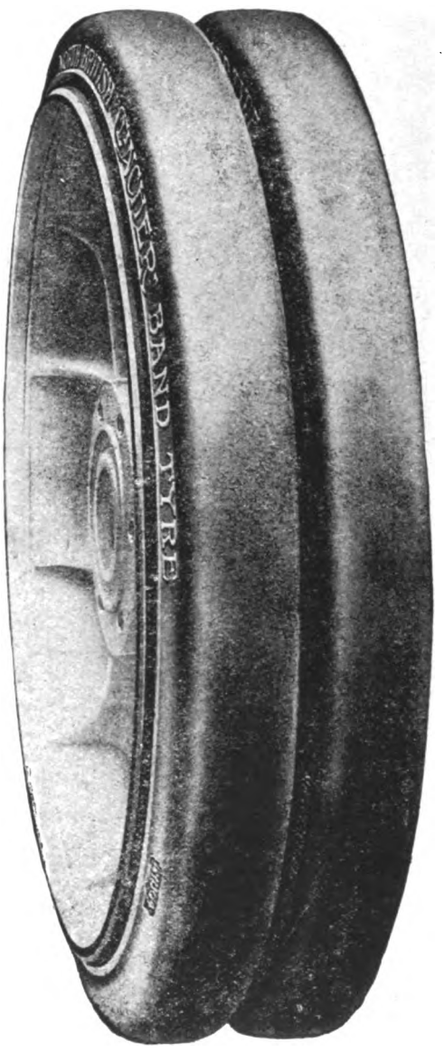
# "The Proof of the Tyre is in the Running"



—that is the supreme and ultimate test of tyre efficiency—and that is just where Clincher Solid Band Tyres have emphasised their superiority. There is no magic in it—just quality. The materials used, the high-grade methods and modern machinery employed, the wonderful resources of the largest rubber factory in the Empire—these are the factors that have made the success of Clincher Solid Band Tyres.

The pure plantation rubber used ensures a perfect resilience, which, by eliminating shock, lengthens the life of chassis and engine. And Clincher Solid Band Tyres afford the maximum mileage and freedom from trouble.

For Light Delivery Van Work there is no better tyre than the "Clincher Cross" Pneumatic Motor Tyre.

*The TRAMWAY AND RAILWAY WORLD can be obtained, post free, at the following rates :—*

FOR THE UNITED KINGDOM—Twenty-five Shillings per annum including 64 issues, of which 12 are illustrated numbers. One Shilling per Single Copy.

**FOR ALL PLACES ABROAD—Thirty Shillings per annum.**

SATURDAY, AUGUST 17, 1918.

## THE CARRIAGE OF GOODS.

CONSIDERABLE difficulties will have to be overcome before the carriage of goods becomes extensive on tramway undertakings, even as a war measure; but these difficulties are by no means insuperable. As far as is publicly known there has been, save in one instance, no advance as regards the conveyance of goods and minerals since the subject was discussed by the two associations at their conferences. The exception is Leeds, where increased facilities have been given to a local company for the carriage of china clay—a war material of great importance—from an outlying district. In relation to parcels there have been a few additions to the towns in which they are carried by tramways at the instance of Transport and Food Committees. This branch of haulage presents, however, nothing like the problems which call for solution in the case of goods. The latter need wagons unless transported at night after passenger traffic has for the most part been dealt with, but in view of the need to reduce coal consumption by 15 per cent. operations at night cannot be much prolonged after the earlier time of running the last cars. Yet the need is more urgent now than ever, for it is imperative that relief should be given to the overtaxed railways and to the use of oil fuels by road motors. This dual necessity has led to the intervention of the Road Transport Board, and to their suggestion for the use of tramways. The Board's efforts have been seconded by the Food Committees, with the result that the question is under the consideration of a number of undertakings Now, at a late period, the Board have come upon the scene with a suggestion that no doubt has already engaged the attention of tramway committees and directors. It is that full information should be obtained as to the extent to which goods would be carried if the existing restrictions on the use of tramways are removed as a war measure. A great deal of time must be consumed in obtaining such information. For one thing schemes must be prepared for constructing sidings to works, warehouses, and goods stations if the project is to be made useful and profitable. It will also be necessary to obtain the consent of the owners of those buildings. Again, attention must be given to the supply of rails and other track material, to say nothing of trucks. The probability is that the rails for the most part must be obtained by taking up a few rails at outlying termini. It is to be hoped that the first efforts in goods haulage will be made by those undertakings which already possess the required powers, but the promise of the Road Transport Board to remove the disabilities under which the other undertakings are operated should act as an incentive to the latter. It may be regarded as a certainty that when a tramway has proved its worth for goods carriage the legal facilities will not be withdrawn, or, at any rate, an enabling Act applicable to all such undertakings will be granted. The recent success of the Sheffield Corporation in obtaining general powers for goods transport is proof that the Legislature will not again safeguard railway companies in a monopoly injurious to the public interest. Highly satisfactory is it to find that the London County Tramways are to experiment in the conveyance of goods, for which purpose two passenger cars are being converted. During the war the department have made increasing use of a number of closed and open wagons for the conveyance of their own material. The Council's lines pass numerous railway goods depots, and to link some of these depots to the tramways would require the construction of only short connecting lines. It is to be hoped that the railway companies will co-operate with the Council and that a beginning may soon be made in the direct use of the tramways for industrial purposes.

## SCIENTIFIC PRODUCTS EXHIBITION.

NOTABLE PROGRESS OF BRITISH MANUFACTURES.

The British Scientific Products Exhibition at King's College, London, which was opened on Monday, and is being continued to September 7, contains a great deal that is of interest and value from a scientific and industrial point of view. In the words of Professor R. A. Gregory, a chairman of the Organising Committee, "The aim of the exhibition is to stimulate public interest and confidence in the capacity of British science combined with industrial enterprise to secure and maintain a leading place among progressive nations; and the object is the full development of our mental and material resources." The exhibits include electrical and electromagnetic appliances, gas traction equipment, and numerous chemical products and processes. The British Ignition Apparatus Association (among the members of which are the British Thomson-Houston Co., Ltd., the British Westinghouse Electric and Manufacturing Co., Ltd., and C. A. Vandervell & Co., Ltd.) show magnetos for car, lorry, cycle and other types of internal-combustion engines. Fleming, Birkby and Goodall, Ltd., display special moulded electrical insulation suitable for all kinds of electrical work. Hadfields, Ltd., exhibit the results of various processes on steel. Thermit, Ltd., show pure carbon-free metals and alloys. Thermit compounds and samples of Thermit welds. The London General Omnibus Co., Ltd., have on view a standard London omnibus (body removed), with design of gas-fuel system under compression, representing the equipment approved by the Gas Traction Committee and the Commissioner of Police in respect of an experiment for a London motor omnibus service.

## THE ARTHUR POWER-SAVING RECORDER.

To the Editor of the TRAMWAY AND RAILWAY WORLD.

DEAR SIR,—Mr. William Arthur, electrical railway engineer, New Haven, Connecticut, U.S.A., has written the "Trolleymen's Handbook of Efficient Car Operation," purely in the interests of national coal and power saving, and at the suggestion of the president of one of the large Eastern Street Railways. Thousands of copies are being circulated amongst platform men in the United States and Canada. Any tramways manager who desires copies, the cost of which is about 5 dols. per 100 copies, should communicate with Mr. Arthur.—Yours faithfully.

A TRAMWAYS MANAGER.

August 10, 1918.

Digitized by Google

## REDUCTION OF SERVICES.

Reductions in tramway services continue to be made or anticipated in various places all over the United Kingdom. At Blackburn and Darwen services are about to be suspended on Sundays until 2 p.m., and to cease on all days at 10 p.m. At Sunderland it is proposed that from the beginning of October the last cars shall leave at 9 instead of 10.30. At Newport over thirty stopping places have been cancelled. Cars have ceased to run on Sundays at Nottingham

The Manchester Tramways Committee at an early date propose to reduce the Sunday car services by practically one half, and to start the cars at 10 o'clock in the morning instead of 8 o'clock. Some economy has already been effected by terminating the services earlier at night and by reducing the number of stopping places by about 25 per cent. The new schedule of fares adopted some time ago is being gradually introduced, and the increases will all be in force at the end of the present month.

## INCREASES IN FARES.

Bolton Tramways Committee propose to abolish workmen's fares on several of the routes and to increase workmen's fares on all the stages by 50 per cent.

The introduction of increased fares at Halifax has been postponed owing to delay in printing the tickets.

Fares on the Darwen Corporation tramways are being increased a halfpenny all round, and the change will come into operation shortly.

## MISCELLANEOUS NEWS AND NOTES.

**Hire of Cars.**—It is proposed by the Tramways Committee to hire cars from the Yarmouth Corporation for use in Burton-on-Trent

**Iron and Steel Institute.**—The autumn meeting of the Institute will be held at the Institution of Civil Engineers, Great George Street, Westminster, on Thursday and Friday, September 12 and 13, 1918.

**Caught on the Guard but Killed.**—At a Newcastle-on-Tyne inquiry into the death of a man who was knocked down by a tramcar, it was stated that deceased was caught on the car guard, but died from injuries to his head.

**Rationing Order Expected.**—The Advisory Committee of the Scottish Section of the Tramways (Board of Trade) Committee held a meeting in Edinburgh recently, and it is expected that a rationing order for fuel and current will be issued very shortly.

**London Car on Fire.**—While a tramway car was proceeding along Peckham Road, London, flames burst out underneath it. When the passengers had alighted the still burning car was pushed by another car to the depot at Camberwell Green, without the traffic being much delayed.

**Wires Torn by Loose Trolley Head.**—Traffic was disorganised on the London United Tramways' system at Brentford,on Sunday owing to overhead wires being torn down by a loose trolley head. Many cars were held up and numbers of people had to cover part of their journeys on foot.

**Temporary Increase in Fares at Llandudno.**—Owing to the pressure of traffic on Llandudno electric tramways, the penny fares are suspended for the next two months. This action has been taken in order to reserve the accommodation for passengers using the cars for longer journeys.

**A Weekly Rest Day.**—The Colchester Town Council has resolved that arrangements shall be made for enabling all motormen and conductors to have one day's rest a week without reduction of wages, and that if an employee is called out on his or her rest day to take the place of another employee who is away ill, he or she shall receive a full day's pay.

**Breakdown at Repair Point.**—The tramway lines were blocked at Greenwich owing to a car leaving the rails at a point where granite setts had been removed with a view to the repairing of the line, and becoming entangled with the rails in the excavation. The line was blocked for some time and Woolwich-London cars had to be diverted by Lewisham.

**A Dangerous Breach of Duty.**—A car driver in the employ of the Rhondda Tramways Company, was fined 30s. for allowing a woman conductor to drive the car. It appeared from evidence that the conductor took control of the levers, and drove the car up a hill. Something went wrong, and the car commenced to glide backwards a distance of between 200 to 300 yards. It was brought to a standstill about 20 yards from another car.

**Alleged Defective Lines.**—While a van was being driven along Woolwich Road, a wheel broke off, with the result that the driver was thrown to the ground and sustained injuries from which he died. At the inquest the breaking off of the wheel was attributed to its skidding on the tramway lines which, it was stated, were in a defective condition at the point where the accident occurred.

**Runaway Omnibus Stopped by Woman Conductor.**—A striking illustration of presence of mind on the part of a woman conductor of a motor omnibus occurred at Reigate. An unattended omnibus, with passengers in it commenced to run down a slight slope, the brakes not being properly secured. Elsie Huggett, the conductor, ran after the vehicle, boarded it and pulled it up, thus preventing what might have been a serious accident.

**Driver's Failure to Stop.**—A tramway driver was fined 10s and costs at the Greenwich Police Court for failing to bring a car to a standstill as soon as possible when necessary to avoid impending danger. It was alleged by the driver of a pair-horse van that while he was pulling across the road the guard of the car caught the back wheel of his vehicle. Defendant did not appear to slacken speed, which witness thought was 14 miles an hour, and witness was thrown off the van

**Carefully Trained Drivers.**—Speaking on the annual report of the Wolverhampton Corporation Tramways, Sir Charles Mander, Bart, chairman of the Tramways Committee, stated that in spite of the fact that it had been necessary to train a great number of new drivers, the undertaking had been free from any serious accident. This was partly due to the committee's sound policy in making it imperative for motormen learners to go through the whole of the systematic course found necessary for the training of tramcar drivers.

**Proposed Extensions at Newport.**—The Newport Corporation have been asked by the Admiralty to estimate for the cost of extending the tramways from certain works to the docks with a view to conveying workmen to and from. It has been reported that a double track would cost £34,317, and a single track with loops £28,517. The Tramways Committee propose to contribute the pre-war cost of the line and the cars, and to bear 50 per cent. of the working costs provided the track, equipment, and cars become the property of the Corporation.

**Industrial Reconstruction.**—The report of the Industrial Reconstruction Council for the six months ended June 30, is an encouraging one for the promoters and for those interested in the principles for the furtherance of which the Council has been formed. It shows that the industrial community is very much alive to the need of organisation and co-operation in the near future. The offices of the Council are now at 2 and 4, Tudor Street, London, E.C.4, whence particulars of its work or information on industrial reconstruction matters may be obtained.

**Traffic Increase in Dundee.**—At a meeting of the Dundee Tramways Committee, Mr. G. A. Johnston, convener, reported that during the past twelve weeks since the fares were increased, the cars had run 3,636 miles more than in the corresponding period of last year, and had carried 404,528 more passengers, while the receipts had increased by £4,727. The general manager, Mr. Peter Fisher, stated that he estimated an expenditure of £10,500 more than last year, and the increase of 5s. a week in the wages would amount annually to £1,780 more.

**Tramway Employees and the Military Service Acts.**—The position of tramway employees under the Military Service Acts is at present engaging the attention of the Ministry of National Service, and a decision may be arrived at very shortly as to the procedure to be adopted in the near future. Meanwhile, it is understood that, although calling up notices are not suspended, the National Service representatives are authorised to agree to the adjournment of all cases in which appeal is made to Tribunals, pending the further decision of the Ministry on the general question.

**Nottingham Tramways and the Wages Award.**—At a meeting of the Nottingham branch of the Amalgamated Association of Tramway and Vehicle Workers, a letter was read stating that the Executive had decided, failing a settlement of the questions arising out of the last award, to call a special conference of all the branches in order to discuss further action. The meeting agreed to leave the matter with the Executive, whose policy it endorsed. Some speakers, referring to the refusal of the authorities to grant the same wages to women workers as to the men, strongly objected to any distinction being made

**Women Employees and the Wages Award.**—The recent decision of the Committee on Production against the application for a revision of the award of March 8, 1918, so as to provide equal payment to employees, both men and women, both as regards war wages and basic rates, is viewed with dissatisfaction by many women tramway employees. There is even talk in some quarters of a cessation of work with a view to supporting the claim for equal pay for the same class of work. Hopes are, however, entertained that matters may not come to such a pass. As reported in the *Daily News*, Miss Mary Macarthur, secretary of the Women's Trade Union League, spoke of the claims of the women tramway employees as follows :—"They are doing men's work, and they should receive men's pay. Their duties are particularly hard, and the strain is so great that many break down. At the same time, every possible effort must be made to avoid a strike. This is not the time to cease work, and I have no doubt that better influences will prevail."

**Leeds Tramways and Suburban Development.**—At a meeting of the Leeds Tramways Committee on August 12, at which the chairman, Alderman R. A. Smithson presided, a resolution was passed generally favouring the idea of the construction of wide roads in the suburbs with tramway tracks in the centre, separate from the rest of the road, upon which a fast service of cars could be maintained. The Committee decided to confer with the Improvements Committee on the details of housing and planning schemes which are now engaging the attention of the latter. The decision is important in view of the plans which will probably be undertaken after the war. Some weeks ago members of the Tramways Committee visited Liverpool and inspected the wide roads laid out in the suburbs of that city prior to building developments. Some of these roads, as described in the TRAMWAY AND RAILWAY WORLD, are sufficiently wide to have a line of trees on either side, broad foot paths, and a special tramway track in the centre.

**War Department Petrol.**—A Committee has been appointed to inquire into the consumption of petrol by the vehicles of the War Office, the Admiralty, the Air Ministry, and the Ministry of Munitions. These departments draw their supplies of petrol from the Admiralty or from the Army service stocks and the Petrol Committee has no authority over these departments. It has control, however, over other Government departments, whose petrol is obtained from civilian stocks.

**Electrical Undertakings in Japan.**—We have received from the Direction General of Electrical Exploitations of the Department of Communications at Tokyo a report containing a summary of general statistics showing the condition of existing electrical undertakings in Japan at the end of 1916. There was a total of 2,617 electrical undertakings. Of these 1,195 had hydraulic stations, 854 steam, and 568 gas. At the date of the return there were 414 miles of single electric line, and 477 miles of double line, giving a total of 891 miles of route and 1,368 miles of track. There were 4,077 motor cars and 415 trailer cars in service. The total number of traction undertakings were 26, of which 21 were operated by water power and 5 by steam. In 1906 there were only four traction undertakings, with a total track length of 254 miles, while the number of cars was 1,313.

## PERSONAL.

**Mr. T. J. Kendrew**, general manager of the Southport Corporation tramways, has been voted by the Tramways Committee an increase in salary from £300 to £400 per annum.

**Mr. E. Ll. Morgan**, borough engineer of Bolton, has been granted an increase in salary from £1,000 to £1,200 a year.

**Mr. R. L. Acland**, electrical engineer and tramways manager of Chesterfield, has been appointed by the Controller of Coal Mines to be district engineer for the purpose of assisting in the coal economy campaign.

**Corporal T. M. Grant**, who has been awarded the Military Medal for gallantry in the field, was formerly a conductor on the Belfast Corporation tramways.

**Mr. C. Hornby**, who until recently represented the Shrewsbury S.T and Challiner Tyre Company, Ltd., in Liverpool, has been appointed manager of the company's Scottish business, with offices at 86, Gordon Street, Glasgow.

**Mr. J. B. Hamilton**, general manager Leeds Tramways, has been engaged to give the Stockton Town Council expert advice in connection with the question of exercising the rights of purchase of the tramway undertaking in the borough.

## FINANCIAL REPORTS AND MEETINGS.

**Lanarkshire Tramways.**—A dividend of 7 per cent. per annum (7s. per share), less tax, for half-year is announced.

**London and Suburban Traction Co., Ltd.**—It is not proposed to pay an interim dividend on the preference shares.

**Hong Kong Tramway Co., Ltd.**—An interim dividend of 7d. per share, less tax, has been declared. The rate last year was 5½d. per share.

**Blackpool and Fleetwood Tramroad Co.**—An interim dividend of 4s. per share, free of income tax, has been declared. The rate is the same as a year ago.

**Devonport Tramways Company.**—To comply with the requirements of Section 188 of the Companies (Consolidation) Act of 1908, a meeting of the creditors of the Devonport and District Tramways Company was called in London last week. There was no attendance.

**Lieutenant (Acting Captain) R. B. Wilmshurst**, Lincs. Regiment, who has been awarded the Military Cross for gallantry and devotion to duty by subduing a fire amongst ammunition, is the youngest son of Mr. T. B. Wilmshurst, electrical engineer for the borough of Derby.

**W. T. Henley's Telegraph.**—The directors of W. T. Henley's Telegraph Works Company have declared a dividend on the Preference shares at the rate of 4½ per cent. per annum, less tax, for the half-year ended June 30, also an interim dividend on the Ordinary shares of 2½ per cent., less tax, payable 31st instant.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended August 14, amounted to £69,270, an increase of £11,640 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to August 14 (nineteen and a half weeks), the total receipts were £1,240,475, an increase of £157,733 on the corresponding period of 1917.

**Oldham Corporation Tramways.**—The receipts from traffic for the year ended March 25, were £148,582 5s. 3d., compared with £124,957 10s. 5d. in the previous year. Working expenses were £106,937 15s. 9d., compared with £85,443 4s. The number of car miles run was 2,121,092, against 2,010,604, and the number of passengers carried 28,703,371, against 24,670,848. The total revenue from the motor omnibuses was £599 8s., and the working expenses £1,507 19s. 11d.

**Brazilian Traction, Light and Power Co., Ltd.**—The report of the directors for the year ended December 31, 1917, and the report by the President on the enterprises in Brazil have been issued. The tramway receipts exceeded those of 1916 by 4·27 per cent., and the increase in net earnings—1,108,835 milreis—exceeds the increase in the gross earnings for the same period and is also greater than the increase in net earnings in any year since 1913. Track extensions of 2·7 miles were constructed for the carriage of freight and to reach the new Meyer car barn, and 2·4 miles of existing track were renewed. It is stated that, in spite of the abnormal conditions, the entire system has been maintained in a high state of efficiency. The company now has 242·28 miles of track, 531 passenger motor cars, 434 trailers, 75 freight motor cars and 126 freight trailers. The car mileage was 24,904,684, and the passengers carried aggregated 207,925,034. The net revenue for the year was $5,266,518. The aggregate reduction in the net revenue of $9,800,000 for the last three years is attributable to the decline in exchange from the rate prevailing in the five years preceding the war. The earnings in Brazilian currency each year have shown substantial gains.

## BUSINESS NOTICES.

**British Berna Motor Lorries, Ltd.**, are now conducting all business from their works at Short Street, New Cut, Southwark, London, S.E.1., to which address all communications should be made.

**The British Thomson-Houston Company** have published their 32-page descriptive list No. 4,110, describing their lever type switches for main circuits, field braking, motor starting and isolating, both for A.C. and D.C. circuits. This list is well illustrated and contains full descriptions and particulars of a wide range of types.

**Messrs. John I. Thornycroft and Company's New Offices.**—Messrs. John I. Thornycroft and Co., Ltd., shipbuilders and engineers, announce that in consequence of the Government having commandeered their offices at Caxton House, Westminster, they are removing to new offices at 10, Grosvenor Place, London, S.W.1. The new offices are quite close to Hyde Park Corner Station (Piccadilly tube) and a few minutes' walk from Victoria Station.

**"The Motor Spirit and Gas Restriction Orders, 1918,"** is a booklet containing the text of the Motor Spirit (Consolidation) and Gas Restriction Order, 1918, and the Amendment Order of June, 1918, accompanying which is an interpretation of the orders based on recent decisions and existing obligations. A subject index adds to its practical usefulness to all who are interested in the law of motor traction. The publishers are Stevens and Sons, Ltd., 119, Chancery Lane, W.C.2, and Will. A. Standring, 19-21, Wilson Street, E.C.2. The price is 1s. 6d. net.

## CONTRACTS AND ORDERS.

**Maidstone Town Council** are purchasing a 3½ ton electric tipping wagon at a cost of £1,200.

**Glasgow Corporation Cleansing Committee** recommend the purchase of four additional electric vehicles, two of 2 tons at an approximate cost of £1,168 each, and two of 3½ tons, at £1,432 each

## WEEKLY LIST OF TENDERS INVITED.

### CORPORATION OF DARWEN.

#### Tramway Uniforms.

The Corporation invite Tenders for the Supply of Uniforms for the employees, inspectors, drivers, conductors (male and female), and parcel boys of the tramways department, comprising great overcoats, tunics, trousers, caps, mackintoshes.

Particulars may be obtained from Mr. G. A. Newsome, A.M.I.E.E. Tramways Manager, Tramways Office, Darwen.

Tenders endorsed "Tramway Uniforms," with samples, must be sent to the undersigned, on or before the 31st day of August, 1918.

No tender necessarily accepted.

By Order,
WILLIAM P. HALLIWELL,
Town Clerk.

Town Clerk's Office, Darwen,
August 14, 1918.

### CITY OF MANCHESTER.

The Electricity Committee of the Manchester Corporation are prepared to receive Tenders for the supply and delivery of a

3½-TON ELECTRIC TIPPING WAGON.

Specification and Form of Tender may be had on application to Mr. F. E. HUGHES, Secretary, Electricity Department, Town Hall, Manchester.

Further particulars and information can be obtained on application to Mr. S. L. PEARCE, Chief Engineer and Manager, Dickinson Street, Manchester.

Tenders, duly endorsed, and addressed to the Chairman of the Electricity Committee, must be delivered at the Town Hall not later than 10 o'clock a.m. on Friday, September 13th proximo.

The firm entrusted with this work will be required to enter into a contract to be prepared by the undersigned.

The Corporation do not bind themselves to accept the lowest or any tender.

THOMAS HUDSON,
Town Clerk.

Town Hall, Manchester,
August 21, 1918.

## POSITIONS VACANT.

#### Shift Engineer and Switchboard Attendant.

Wanted (for a certified undertaking), Shift Engineer, also Switchboard Attendant, for working seven eight-hour shifts per week, with experience in the operation of direct-current supply, Willans engines, mixed pressure steam turbines, and condensing plant. Preference given to shift engineer who has had experience in the handling of steam boilers. Salary of shift engineer, inclusive of all bonuses, £208 per annum. Wages of switchboard attendant, inclusive of all bonuses, £2 16s. 3d. per week of 56 hours.—Apply, with copies of three testimonials, stating age, and when at liberty, to the ELECTRICAL ENGINEER, Electrical Engineer's Office, Craven Street, Birkenhead.

#### Junior Shift Engineer.

Junior Shift Engineer required. Should have experience in the running of high-speed D.C. steam sets and rotary converters. 55s. per week inclusive; no night shifts. Apply with references.

BOROUGH ELECTRICAL ENGINEER,
Electricity Works,
Heywood, Lancs.

### COUNTY BOROUGH OF BARNSLEY.

#### Electricity Department.

#### Shift Engineer.

Wanted, Shift Engineer, experienced in E.H.T.—A.C. and L.T.—D.C. 3-wire supply, with Rotary Converters.

Salary £150 per annum, plus 12½ per cent.

Applications, stating age, training, experience, medical classification, and date when able to commence duties, accompanied by not more than three recent testimonials, to be addressed to Mr. T. W. HIBBERT, Acting Borough Electrical Engineer, Electricity Works, Barnsley, endorsed "Shift Engineer."

August 17, 1918.

W. P. DONALD,
Town Clerk.

### NORTHAMPTON CORPORATION TRAMWAYS.

Wanted two Switchboard Attendants, practical men, accustomed to D.C. generation for tramway supply. Give two references and state wages required, immediately, to CAMERON, Tramways Manager, Northampton.

#### Shift Engineer.

Shift Engineer wanted in combined A.C. and D.C. station. Salary £175 per annum.—Apply, stating age and experience, to BOROUGH ELECTRICAL ENGINEER, Electricity Works, Dover.

#### Overhead Linesman.

Overhead Linesman. Apply, stating age, experience and wages required.—Manager, Birkenhead Tramways.

## FOR SALE.

### COUNTY BOROUGH OF SALFORD.

The Electricity Department have for sale two 1,000 Kilowatt Direct-Current Turbo Generators, Willans disc and drum type, coupled to Siemens machines, voltage 440-490. Rated output 1,000 kilowatts with 160 lb steam pressure. The sets are in regular commission, practically new, and can be seen in operation by appointment. Full particulars from the Borough Electrical Engineer, Electricity Works, Frederick Road, Salford. Tenders are invited by 12 noon, Monday, September 2nd, 1918.

L. C. EVANS, Town Clerk.

### NORTHAMPTON POLYTECHNIC INSTITUTE, ST. JOHN STREET. LONDON, E.C.

**Session 1918-19.**

**ENGINEERING DAY COLLEGE.**

Full Day Courses in the Theory and Practice of Civil, Mechanical and Electrical Engineering will commence on Monday, 30th September, 1918. The Courses in Civil and Mechanical Engineering give a thorough grounding in Engineering work, and in the third and fourth years include specialisation in various directions, such as Automobile and Aeronautical Engineering. In Electrical Engineering with similar grounding the specialisation is in the direction either of Heavy Electrical Engineering or of Telegraphy and Telephony, including Radio-Telegraphy.

Entrance Examinations will be held on Tuesday and Wednesday, 24th and 25th September, at which Three Entrance Scholarships will be offered. The courses include two summer periods of about six months each spent in Commercial Workshops and extend over four years altogether. They also prepare for the Degree of B.Sc. in Engineering at the University of London. Fees for either of these courses, £15, or £11 per annum. *Students well grounded in Science, Mathematics, and Drawing, may be admitted direct to the second year's course.*

TECHNICAL OPTICS.

Full and part-time Courses in this important department of Applied Physics will be given in specially equipped Laboratories and Lecture Rooms. The entrance examinations will be held and the session will open on the dates given above.

An Aitchison Scholarship (value £38) will be offered in this department at the Entrance Examination.

Full particulars can be obtained on application at the office of the Polytechnic or to—R. MULLINEUX WALMSLEY, D.Sc., Principal.

## THE STRIKE OF WOMEN.

Both to tramway and omnibus undertakings and to the general public in London great trouble has been caused by the women conductors going on strike for a war bonus equal to that which has been granted to the male conductors. What was intended to be a popular cry was raised that women doing the same work as men should receive the same pay. The outside public, unacquainted with all the circumstances, were inclined to think the claim a justifiable one. Yet it is only a short time since the Committee on Production considered all the circumstances and came to the conclusion that the claim on behalf of the women to the last bonus had not been made out. The award was to be binding on both employers and employed. The former, of course, have observed it, but the women conductors on the omnibuses and on some of the metropolitan tramways had not the slightest hesitation in going on strike and refusing to wait for any fresh reference to the Committee on Production. It has been demonstrated that some classes of women at all events are just as prone as men, in spite of war conditions, to break agreements which have been definitely arrived at. On analysis it can easily be shown that women, who as conductors are nominally doing the same work as men, are not really in that position and are not entitled to the same total remuneration. The companies or local authorities employing them have been put to additional expense in providing accommodation and facilities for them. They have been put to more expense in training the women, and when the latter are trained they frequently leave the service after a short period. That means the engaging and training of more women. Then there is the question of absenteeism, which in the case of women is often an acute one. With far greater frequency than in the case of men they fail to turn up for duty. In many cases they have not the same responsibilities as men; sometimes they are in receipt of separation allowances from the War Office; in all cases they earn such high wages that they do not need to care much though they lose a day or two per week. A result is that the companies require to have a large proportion of spare hands, so that the vehicles may be kept on the streets whether the regular conductors appear for duty or not. These supernumerary employees have to be paid their wages whether they are actually employed in fare collecting or not. Thus the employment of women is an expensive matter for the undertakings concerned, and if the full bonuses payable to men are also to be paid to women such employment becomes still more expensive. The favourite method of the Government for bringing a dispute to an end is to hold a Conference of representatives of both parties, and then to concede to the employees all that they demand. The employers have to acquiesce whether they like it or not, and the award is, of course, binding on them. Very often, as in this case, the employees do not consider it binding on them, and as soon as opportunity offers they strike or threaten to strike for further concessions. It may be feared that the same routine, destructive of all proper relations and of the efficient carrying on of work, will be followed on this occasion. The Committee on Production are to hear the parties on Monday, and soon thereafter we shall have another award. Quite possibly the threat of an extended strike will bring about the concession demanded. The strikers are backed up by some of the unions, as it suits the latter at present to have women's wages as high as possible. These wages can in the future be used as a fulcrum for more demands from the men. Should such demands be unsuccessful, the unions know that many employers prefer male labour, so there will be the better chance for men being taken on to displace women after the war is over. The situation is not a nice one. It only remains to be admitted that there are no doubt cases of individual hardship, where efficient hard-working women who do not absent themselves from duty are entitled to all the consideration which can be given to them. The difficulty as to them is the cast-iron uniformity necessitated under Government regulation and trade union rules.

## COAL CONSERVATION.

PROPOSED MINISTRY OF MINES.

The final report of the Coal Conservation Committee was issued by the Ministry of Reconstruction on August 20. The report includes as appendices the reports of the five sub-section committees, dealing with mining methods, power generation and transmission, metallurgy, carbonisation and geology, which have been approved by the main committee. The report of the mining sub-committee proposes that a Ministry of Mines and Minerals should be established, with statutory powers to take all necessary steps for the conservation of coal. District committees are to be appointed by the Ministry consisting largely of practical men with mining experience of the district, and to include representatives of both lessors and lessees in the district. These committees will investigate and report on questions referred to them, prepare draft schemes where necessary, and give every assistance to the Ministry or Advisory Council. The main committee allude to the great importance of stopping the decline of the output of coal per head of the persons employed. Coal cutting machinery, face elevators and other labour saving plants should be more largely used and underground haulage should be improved in extent and efficiency. The qualifications of mining officials of all grades ought to be improved, and the committee recommend that greater facilities should be provided for obtaining mining and technical education, and that this should be brought within the reach of the younger workmen who show special aptitude and ability. Alluding to strikes and lockouts, the committee recommend that machinery of conciliation should be set up enabling complete and impartial investigation to be carried out, and that every effort should be made to secure a settlement by negotiation before breaking-off relations between employers and workmen take place.

**Suggested Closing of Power Station.**—A suggestion has been made that, with a view to economy of coal in the Leeds City Tramways undertaking, one of two power stations should be closed.

# STRIKE OF TRAMWAY AND MOTOR OMNIBUS WORKERS.

An extensive tramway and omnibus strike broke out quite suddenly in the Metropolitan area on Saturday. The origin and aims of the strike and its bearing on industry generally are clearly set forth in a statement issued on behalf of the employers and reproduced below. The terms of the award of the Committee on Production to which reference is made were given in full in the TRAMWAY AND RAILWAY WORLD of July 13. As soon as the award was adopted negotiations were opened on behalf of the employees with a view to securing from the various corporations and companies the concession of an extra 5s. to the women employees. Eventually becoming impatient, the rank and file of the workers, against the wishes of the officials of their own organisations, precipitated a crisis by leaving work at the shortest notice. Efforts were at once put forward to arrest the strike and Sir George Askwith, the Chief Industrial Commissioner, sought to arrange a conference between representatives of the employers and the employees. A notice was issued on behalf of the London branch of the Amalgamated Association of Tramway and Vehicle Workers, to which most of the London County Council tramway workers and many tramway workers in provincial towns belong, advising them not to leave work pending the conference. The Secretary of the National Transport Workers' Federation (Mr. Robert Williams) urged an immediate resumption of work pending a meeting of the Federation's representatives with Sir George Askwith, and a national conference called for Wednesday to determine a national policy in regard to the women's claim. He referred to the fact that Sir George Askwith was arranging a conference with the employers, and added: "Immediate resumption of work will strengthen our hands in future conferences with Government and possible negotiations with employers on national basis." Unfortunately the Federation Secretary's suggestion failed to commend itself to the strikers. The strike continued and received the adhesion of the executive of the London and Provincial Union of Vehicle Workers, who endorsed the action of those of their members who had struck and recommended others to cease work in support of them. The strike was now in full swing in the Metropolitan area, and on Monday 10,000 workers were out, and 3,000 vehicles were off the streets. The London County Council maintained a good service, as did some of the local municipal undertakings. The Metropolitan Electric Tramways seem to have done fairly well in the eastern portion of their area. The motor omnibuses of the National Steam Car Company were also in evidence. Other tramway and omnibus services, however, were practically in a state of suspension.

The strike began to extend to the provinces on Monday, among the centres affected by suspension or diminution of transit services then or later being Bath, Brighton, Bristol, Folkestone, Hastings, Weston-super-Mare and Worthing. Negotiations initiated on Monday were productive of no immediate result. Sir George Askwith saw a deputation consisting of the Secretary of the Transport Workers' Federation and representatives of the London and Provincial Vehicle Workers' Union. Later he conferred with the employers. Subsequently there was a joint meeting of representatives of employers and employees. At the conclusion Mr. H. E. Blain, operating manager of the London General Omnibus Company, stated that no settlement had been arrived at, and that there was no immediate indication of any. The employees' representatives had made no offer, but had stated that they had no dispute with their employers—their opposition being to the award of the Committee on Production. It had been suggested that the strikers should be asked to return to work while matters were being cleared up, but apparently there was no response.

On Tuesday there was a slight increase of the strike in the eastern part of the Metropolitan area, affecting the London County Council service and some of the municipal services in Essex. The trouble also began to extend to the tube railways, where some women employees of the Bakerloo line ceased work. There was not much increase of the strike in the provinces. It was reported that the corporations of Blackburn and Wolverhampton had decided to pay the extra five shillings to their women employees.

On Wednesday the position began to look more hopeful. At a conference, which lasted over four hours, between Sir George Askwith and representatives of the unions concerned, and of the Transport Workers' Federation, it was agreed in effect that the various executives should recommend their members to resume work pending a reconsideration of the awards by the Committee on Production. This recommendation being acted upon the Committee will meet on Monday and their decision will be made known at the earliest possible moment.

### THE CASE FOR THE EMPLOYERS.

The following statement on behalf of the employers was issued from Electric Railway House on Wednesday evening.

From time to time since the outbreak of war applications for increased remuneration have been made by tramway and omnibus employees, and an agreement was come to in February of this year between the National Transport Workers' Federation and organisations representative of the employers, that such applications would be dealt with on a national basis, and, failing agreement, would be submitted to the arbitration of the Committee on Production, whose findings would be binding on both sides, and would not be subject to review under periods of four months.

In March last an award was given, involving the employers in additional payments of hundreds of thousands of pounds per annum. In July the Transport Workers' Federation submitted a new claim for: (1) Payment of a bonus of 12½ per cent. on total earnings to men and to women, and (2) equal payments to women as to men both as regards basic rates and war wages.

In accordance with agreement, this claim was submitted to the Committee on Production, who, after a careful hearing of the statements of both sides, made an award to the following effect: (1) That an additional war wage of 5s. per week (making a total war wage advance of 25s. per week) be paid to able-bodied men in full settlement of any claim with respect to the 12½ per cent.; (2) that the claim for the payment of 12½ per cent. to women had not been established.

### WOMEN MORE COSTLY THAN MEN.

(3) As regards the claim for the payment of the same basic rates and war bonuses for the women as for the men, the award was as follows: "It was stated on behalf of the employers at the hearing that they accepted the principle that in cases in which women are doing the same work as men, and doing it as efficiently, and provided their employment does not involve increased expenditure compared with the employment of men, they should be paid the same wages as men. They showed, however, that in the case of tramway and motor omnibus undertakings a large number of women employees stay only a comparatively short time, and their attendance is less regular than that of men, necessitating the keeping of a large spare staff, which adds to the cost of employing women. The decision of the Committee with reference to the application that the award of 8th March, 1918, shall be revised so as to provide for equal payment to women and men both as regards war wages and basic rates is that the claim has not been established."

In the whole of the undertakings in London where the present strike originated the basic rate of wages to women is the same as that paid to men. The decision of the Committee on Production in withholding from women any payment in respect of an application for 12½ per cent. has followed the practice of all Government Departments in connection with the matter. Throughout the country there has not been, in any industry, any award for the payment of 12½ per cent. or any sum in lieu thereof to women.

### OF NATIONAL IMPORTANCE.

The question raised is, therefore, a national one of first importance, as, if the present application is carried into effect in regard to tramway and omnibus women, it would, logically, raise for similar consideration the whole question of the remuneration of women engaged in munitions and all other forms of industry. The strike in London, without any notice to the employers or to the public, and in direct contravention of the instructions of the National Transport Workers' Federation, the agreed negotiating body, is against an award of the official Committee on Production, set up by the Government to deal with wages disputes. If the decisions of such Committee are to bind only one of the parties to a dispute then the whole of the machinery of the Munitions of War Acts, under which such differences are to be dealt with and awards made, is rendered useless.

Signed on behalf of the

| Tramways and Light Railways Assoc. .. | A. DE TURCKHEIM. |
| Municipal Tramways Conference .. | WILLIAM CLOUGH. |

On Thursday the strike came to an end with the decision of the strikers to resume work on Friday. This decision was reached at a meeting of employees at the Ring, Blackfriars Road, where it was announced that the five unions concerned, with representatives of the National Transport Workers' Federation, had met Sir George Askwith, and after a lengthy conference had decided to recommend to their respective executive councils:—Resumption of work pending the reference to the Committee on Production on

(*a*) Interpretation of their award, namely, whether, under Clause 14 of the award of July 9, the Committee on Production intended to nullify any agreements or undertakings, and in particular any such undertaking as is alluded to in Clause 4 of the award of March 8.

(*b*) On a claim that equal total payments be made to women as to men for equal work in the tramway and omnibus undertakings, parties to the award of March 8 and July 9.

(*c*) That any present change of payment should date from the beginning of the first full pay day following July 9.

(*d*) That any future changes of payments should take place conjointly with those of the men.

The terms of the award of March 8 were given in the TRAMWAY AND RAILWAY WORLD of March 16.

There was some opposition and a great deal of discussion, but eventually the recommendation to resume work pending the Committee on Production's decision on the points above mentioned was carried by a very large majority. It was mentioned that it had been agreed that all strikers (including those who had left their duties in the tube railways) should be reinstated. Yesterday (Friday) there was a general resumption of work on the various systems. It is understood that the Committee on Production will proceed to deal with the matter on Monday.

---

**Fare Refused as a Protest.**—A refusal on the part of two passengers on Southend-on-Sea Corporation cars to pay fares as a protest against what they regarded as excessive charges imposed by the recent increase of fares led to their being ordered to pay the costs on the resulting summonses.

Digitized by Google

## INCREASES IN FARES.

At Southport all tramway fares have been increased. The Sunderland Town Council has approved the Tramways Committee's recommendation to increase certain penny fares to three halfpence. Several members expressed their intention of supporting a proposal to rescind the decision at the next meeting of the Council.

At Rochdale it is proposed to apply for the sanction of the Board of Trade to increase fares. It is suggested that ½d. be put on all stages up to 2d., and 1d. on all stages between 2d. and 3½d.

Speaking on the position of the Portsmouth Corporation Tramways, Councillor Timpson, Chairman of the Tramways Committee, said that, although they had not yet increased the fares, in the near future it might be necessary to do this or withdraw the cheap tickets.

## MISCELLANEOUS NEWS AND NOTES.

**More Railway Restrictions.**—It is stated that facilities for railway travelling are likely to be seriously curtailed in October.

**Council's Complaint of Track Condition.**—Felling Urban Council are complaining to the Gateshead Tramways Company of the condition of the track in Felling.

**Middlesbrough Tramway Proposal.**—The Middlesbrough Town Council propose to purchase the portion of the Middlesbrough, Stockton and Thornaby tramway which is within the borough of Middlesbrough.

**Fall from the Top of a Car.**—While repairing a tramway wire at Wednesbury, a fitter fell from the top of a car and died from fracture of the skull. It is surmised that he had a shock through coming in contact with a live wire.

**The Aberdeen Managership.**—The Aberdeen Tramways Committee have appointed a sub-committee to consider the filling of the vacancy caused by the appointment of the manager, Mr. R. S. Pilcher, to the management of the Edinburgh Corporation Tramways.

**Damages for Fractured Ribs.**—A passenger, who was sitting on a top seat of a tramcar when the car collided with another one, throwing him forward against the seat in front and fracturing two of his ribs, was awarded £48 damages against the London County Council.

**Aeroplane Collides with Tramway Cables.**—An aeroplane at Marseilles owing to engine trouble, says the *Times*, struck one of the tramway cables, causing a fusion, which set on fire two cars which were approaching. Four passengers were killed and several injured, while the two airmen were seriously burnt.

**Collision between Car and Tractor.**—A collision occurred on the London County Council line at Stockwell, between a Tooting-Southwark car and a traction engine with wagon attached, which was crossing the road. The driver of the car, a discharged soldier, and four passengers had to be removed to hospital.

**Coroner Suggests Queues.**—At an inquest on a woman, who died from injuries sustained through being run over by a cart, it was stated that deceased was in a crowd trying to board a car at Greenwich and was one of several who stumbled on the roadway. The Coroner suggested the desirability of adopting the queue system.

**Van Skids on Tramway Line.**—A defective condition of the tramway metals was suggested to have been the cause of the skidding and breaking off of the wheel of a van at Greenwich, which resulted in the driver being thrown and fatally injured. At the inquest the foreman of the jury expressed the opinion that the London County Council were doing their best, in view of shortage of labour, to repair the lines.

**Croydon Tramways Certified.**—The Croydon Corporation Tramways have been certified under the Munitions of War Act of 1917, on the ground of the importance of the undertaking as contributing to the carrying on of munition work. The issue is anticipated of an order directing the Corporation to pay the Tramway employees the bonus awarded to vehicle workers under the recent award of the Committee on Production.

**Mexborough and Swinton Tramways.**—In a recent note in these pages regarding Rotherham Corporation Bill, Sir John Snell, who was giving evidence in support of the Bill, was reported to have expressed the opinion that £45,000 would be a reasonable price for the purchase of Mexborough and Swinton tramways. The Bill promoted by the Corporation, however, does not provide for the acquisition of the tramways, but only of the lighting area.

**Reduction in Energy Consumption.**—The Tramway undertakings of Lancashire and Cheshire held a conference at Manchester on August 16 to consider the order requiring tramway authorities to reduce their consumption of energy by 15 per cent. The conference was private, and it was decided to ask that the operation of the order should be delayed pending a conference of tramway and electrical representatives with the Board of Trade. It was contended that a reduction of 15 per cent. in the consumption of electricity would mean a reduction of 25 per cent. in car mileage, which would have a serious effect in large industrial centres.

**Tramways and Light Railways Association.**—The "Journal" of this Association for August contains a report of the tenth annual congress held on July 12. The names of the members of the Council printed in the "Journal" shows that Mr. G. M. Harriss, general manager of the Dublin United Tramways Company, and Mr. G. W. Holford, general manager of Salford Corporation tramways, have retired, and Mr. A. L. Barber, secretary of the Metropolitan Electric Tramways, and Mr. H. L. White, manager and engineer of Great Grimsby Street Tramway Company, have been elected by the Council to fill the vacancies thus created.

**Strike at Yarmouth.**—On Friday of last week the employees of the Yarmouth Corporation Tramways ceased work as a protest against their rate of pay. On Sunday an undertaking was given on behalf of the Corporation that the Tramways Committee would give sympathetic consideration to the position, provided employees returned to work, and would make known their decision at the earliest moment. Accordingly the men resumed their duties on Monday. The Tramways Committee then offered an immediate advance of 7s. per week, which was accepted by the employees as satisfying their claim.

**Proposed Tramway Extension at Newport.**—The Admiralty recently asked the Tramways Committee of Newport to consider the desirability of extending the tramways from Messrs. Lysaght's works to the Channel Dry Docks, so that workmen might be conveyed to that district. Mr. A. Nichols Moore, the borough electrical engineer, in reporting on the matter, has stated that a double track would cost £34,517, and a single track with loops, £28,517. The Committee has agreed to contribute an amount equivalent to the pre-war cost of the construction and the cars, and to bear 50 per cent. of the working costs, provided the track, equipment and cars became the property of the Corporation.

## PERSONAL.

**Mr. J. A. Davidson,** mechanical engineer at Belfast Corporation electricity station, has resigned owing to ill-health.

**Mr. B. Hall,** of the Chatham and District Light Railways, has been presented by his colleagues with a case of instruments and a pipe on his leaving to take up the position of assistant engineer and manager of the Keighley Corporation Tramways.

**Mr. Frank Ayton,** engineer and manager of Ipswich electric supply and tramways departments, has been granted an increase in salary from £700 to £850. Mr. E. C. Ransome, chairman of the Tramways Committee, in moving the recommendation, spoke in terms of cordial appreciation of Mr. Ayton's work as an engineer and capable manager. He had taken an extraordinary interest in the undertaking, and the work as a consequence had largely increased.

## FINANCIAL REPORTS AND MEETINGS.

**Walter Scott, Ltd.**—A final dividend of 10 per cent. on the ordinary shares, making 15 per cent. for the year ended 30 June, is recommended. For the previous year the dividend was at the same rate.

**Portsmouth Corporation Tramways.**—The financial statement for the year ended March has been presented by the Chairman of the Tramways Committee, Councillor J. Timpson. The statement showed that the revenue amounted to £153,087, comprising traffic receipts £123,494; special cars and fares, £280; cheap tickets, £27,471; and advertising on cars, etc., £1,842. The expenditure amounted to £127,165, as follows: working expenses, £70,841; grants to dependants, £4,001; war bonus to employees, £5,447; principal and interest charges, £39,860; and income-tax, £7,016. This gave an excess of revenue of £25,922, which, with £1,350 as interest on credit balances, left for appropriation the sum of £27,272. The balance for appropriation the previous year was £18,580, of which £14,000 was devoted to the relief of the rates. The balance was £8,692 larger this year and it was proposed to dispose of the £27,272 as follows: £6,078 to be placed to the renewals fund; £2,000 to the reserve and insurance fund; £15,000 in aid of the rates; and £4,194 to be carried forward for the current year. £15,000 represented nearly a rate of 4d. in the £. The total handed over to the relief of the rates since the tramways had belonged to the Corporation was £130,500.

## CONTRACTS AND ORDERS.

**Ossett Council** contemplate the purchase of a steam wagon for the Highways Department.

**Manchester Tramways Committee** have accepted the tender of Fred. Smith and Company, of Salford, for trolley wire.

**Hull Corporation** have asked the Local Government Board for their sanction to the purchase of an electric tipping wagon at an estimated cost of £1,165.

**DICK, KERR & Co.,**
**Limited,**
**ABCHURCH YARD, CANNON STREET, LONDON, E.C.,**
**ENGINEERS & CONTRACTORS.**

**Complete Equipment**
**TRAMWAYS & LIGHT RAILWAYS**
**at home and abroad.**

## WHERE ARE WAR BONUSES TO END?

In London for the last week or two we have been face to face with the demand of female tramway and motor omnibus employees for the same war bonus additions to wages as are given to the men—that is to say, in cases where the women do the same work as the men. That claim was made quite irrespective of the fact that, apart from the remuneration paid to the individual, employment of women is more expensive than that of men. Yesterday the public announcement was made that the Committee on Production have granted the claim of the women, and there is to be an investigation by a Government Committee as to the general question of the wages of women and men. The whole position is very serious. But there is another feature of the war wages question which has just emerged into general publicity. It transpires that on July 24 last the Committee on Production awarded an advance of 3s. 6d. a week to men employed by the Engineering Employers' Federation. Little notice was taken of the matter in the Press generally, as it appears that the award in the first place at least arose out of a claim confined to the Liverpool district. There also seems to have been some official attempt to keep the matter quiet, but now it is announced that the award is being extended to a large number of non-federated firms in the engineering and foundry trades. Employers all over the country are receiving demands for the extension of the 3s. 6d. to workers of many classes who do not come within the area of the award. The owners of tramway undertakings are also being subject to the same demand, so far at least as their repair shop hands are concerned. This increase is quite independent of the 12½ per cent. granted previously by the Ministry of Munitions, and the familiar story of that business is likely to be repeated. A correspondent, writing in one of the daily papers the other day, asserted from his recent experience as an employer that the nominal advance of 3s. 6d. frequently means in practice about 8s. 6d. This is in connection with work for the Ministry of Munitions, and that Department is being blamed. In any case, the vicious circle goes on widening. These large increases of wages soon become almost universal, as all the classes of workers who do not get them at first make an irresistible clamour. The inevitable result is to raise still further the prices of commodities. That in turn leads to fresh demands for still higher wages. The position of the Committee on Production is far from enviable; the members of it must see that the course which is being pursued leads alike to indefinite, if not illimitable, increases of wages, and to corresponding increases in prices, and in the cost of living. Yet the Committee seem unable to do anything to arrest the process. The individual who has to subsist on a fixed income suffers more and more. So also the tramway undertaking, which has to subsist on fares which cannot for the time be raised beyond a certain limit, is going to suffer still more than in the past. The recent Act of Parliament which was passed to enable tramway and certain other undertakings to raise their maximum charges, will be useless unless it is continually being called into operation. And that is not so easy a task. The tramway undertaking has to prove to the Board of Trade that owing to the increased cost of wages and materials it is in financial distress. Then the Board may, if they think fit, make an Order allowing of an increase within certain limits of the statutory maximum fares. No doubt the process will take time. Even if it is successful, the cost of wages and materials will be going up all the time, and before long there will be need for another application to the Board of Trade. So the Board and the tramway undertakings will be kept as busy in the matter of increasing fares as the Committee on Production and the "workers" are in the matter of increasing wages. Where is it all to end? And what are we to say of the prospects of "reconstruction," and of industrial peace after the war?

## THE COAL SHORTAGE.

STOCKS TO BE SHARED.

The Coal Control Department has issued the following :—

The position of gas and electricity undertakings is so serious as regards coal supplies that the Coal Control Department has been obliged to make special arrangements in cases where relatively large stocks are in hand. These are now being drawn upon to make good deficiencies of other undertakings not so well off for coal. The attitude of the Distribution and Supplies Branch is that all public undertakings must be kept going so long as coal is available, and, in the national interest, those that have must be prepared to assist those that have not until such time as the general position improves. Managers of public utility undertakings have real cause for anxiety, particularly gas works, which are more restricted than electric stations in their choice of coal and its source of origin. The stocks of both are far below what they were at this time last year, and the position is anxious.

The London position particularly is most difficult, as some months ago 50 per cent. of the boats engaged in the Durham and London coal business had to be diverted elsewhere. The coal that ordinarily would have come to London had to be promptly shipped to meet the urgent needs of France when the German push interfered with output from the French coal fields. Therefore, in addition to the shortage of Durham coal, the Control officers were faced with the almost insuperable problem of transport. They were obliged to attempt to make up the missing London supplies by bringing coal from Durham to London by rail. The main trunk lines on which the coal is carried are congested, and that is why the stocks on which London will this winter depend for its light and much of its warmth are still very short.

If more coal—much more coal—is got from the mines quickly, and if there is the most rigorous all-round economy—these are absolutely essential conditions—we may, in the course of the next nine weeks, be able to better the position.

**Only One Hospital Case.**—When a motor lorry collided with a Portsmouth tramway car and smashed all the glass on one side of the car, although the car was full of passengers only one required hospital treatment.

# THE TRAMWAYS AND OMNIBUS WORKERS' DISPUTE.

In accordance with the arrangement under which the female tramway and omnibus conductors who had been on strike in the London area went back to work, the Committee on Production sat at the Central Hall, Westminster, on Monday, to hear parties on the reference made to them. As already announced the reference required the Committee to give an interpretation of a previous award and to decide on the claim that women should receive total payments equal to those received by men for equal work. Through the developments which had taken place the question to be decided applied to the whole country and not merely to the Metropolitan district.

Thus it came about that the hearing was attended not only by representatives of the trade unions and of the London General Omnibus Company and other Metropolitan companies concerned, but by officers connected with a number of the leading tramway undertakings in the country. The proceedings and other arrangements necessitated by them dragged along for the greater part of the week. It is understood that the delay arose because the Municipal Tramways Association and the Tramways and Light Railways Association executives had not received sufficient notice of the hearing to enable them to consult their constituents and to receive instructions from them. Neither of these Associations as a body has authority to deal with questions affecting wages; when such a question arises it is necessary to ascertain the views of the individual members of each Association, and by means of a special meeting instructions may be given to delegates to put certain opinions and arguments before the Committee on Production. As there had been no time to call such meetings, we understand that representatives of both Associations applied for a postponement of the hearing. This was strongly opposed by the Labour representatives, who expressed the fear that feeling was so keen among the workers that any postponement would lead to an immediate resumption of the strike. The Committee on Production—Sir George Gibb in the chair—decided that they must proceed at once. Postponement being refused, the tramway representatives took no further part in Monday's proceedings. These were confined to speeches and arguments between the Labour representatives on the one hand and those of the London companies who were fully authorised to speak for those bodies.

Subsequently it was arranged that there should be a second hearing at which the tramways authorities might put their case. A conference of members of the Muncipal Tramways Association was held on Wednesday at which delegates were instructed as to the points they were to put forward. The Council of the Tramways and Light Railways Association also got instructions, and the hearing before the Committee was resumed on Thursday. The main contentions of both parties have already been made public. While the women and the trade unions supporting them maintain that women doing the same work as men should have not only the same wage but the same war bonus, the employers contend, among other things, that the employment of women is in other respects so much more expensive than that of men that the same total remuneration should not be paid to them. The employers also are in a state of protest against the subject being reopened so soon after the previous award had been given.

---

When the Committee met on Monday the members of it present were Sir George Gibb (chairman), Sir W. Mackenzie, Colonel Denny, Mr. A. S. Button and Mr. G. Barker. The points in detail for the consideration of the Committee, as contained in the reference to them, were :—

(*a*) The interpretation of their awards—namely, whether under Clause 14 of the award on July 9 the Committee on Production intended to nullify any agreements or undertakings, and in particular any such undertaking as is alluded to in Clause 4 of the award of March 8.

(*b*) On the claim that equal total payments be made to women as to men for equal work in the tramway and omnibus undertakings who were parties to the awards of March 8 and July 9.

(*c*) That any present change of payments should date from the beginning of the first full pay day following July 9.

(*d*) That any future changes of payments should take place conjointly with those of the men.

The terms of the awards were given in the TRAMWAY AND RAILWAY WORLD, of March 16 and July 13.

The employers' side was represented by Mr. H. E. Blain, operating manager of the London General Omnibus Company, and others. The case of the employees was presented by Mr. Robert Williams, (National Transport Workers' Federation), Mr. Ben Smith (London and Provincial Union of Licensed Vehicle Workers), and Mr. Hurst. (Amalgamated Association of Tramway and Vehicle Workers).

At the resumed hearing on Thursday, Mr. J. M. McElroy, general manager, Manchester Corporation Tramways, and Mr. A. R. Fearnley, general manager, Sheffield Corporation Tramways, put the case for the members of the Municipal Tramways Association. Mr. Fearnley in particular emphasised the extra cost of employing women conductors as compared with men. On the majority of systems the spare list where women were employed amounted to 25 or 30 per cent. of the entire number of women conductors as compared with 7 or 8 per cent. in the case of men. Mr. R. J. Howley, speaking for companies included in the Tramways and Light Railways Association, in addition to his argument maintained that when the Committee gave their decision it ought to be final and that there should be no more of the "big stick" policy on the part of the employees.

The hearing was concluded.

### THE DECISION.—CLAIM CONCEDED.

Late on Thursday night the award of the Commitee on Production was issued. In brief it concedes the wages claim made on behalf of the women, and recommends that the whole question of women's wages and advances should be made the subject of a special inquiry. Simultaneously the Government announced the appointment of a Committee for that purpose.

The text of the award is as follows :—

1. The parties to this reference are (1) the Municipal Tramways Association, the Tramways and Light Railways Association, the London United Tramways (Limited), the Metropolitan Electric Tramways (Limited), the South Metropolitan Tramways (Limited), the London General Omnibus Company (Limited), the London Omnibus Section of Messrs. Thomas Tilling (Limited), the National Steam-car Company (Limited), the Croydon Corporation, and the British Automobile Traction Company (Limited) (London Branch), and (2) the National Transport Workers' Federation.

2. The claim submitted was as follows :

(*a*) Interpretation of Committee on Production awards, viz., whether under Clause 14 of the award of 9th July, 1918, the Committee intended to nullify any agreements or undertakings, and in particular any such undertaking as is alluded to in Clause 4 of the award of 8th March, 1918.

(*b*) That equal total payments be made to women as to men for equal work in the Tramway and Omnibus Undertakings, parties to the awards of 8th March and 9th July, 1918.

(*c*) That any present change of payment should date from the beginning of the first full pay day following 9th July, 1918.

(*d*) That any future changes of payments should take place conjointly with those of the men.

In the case of the Croydon Corporation the application submitted included a claim for the extension to the employees of that authority of the awards of 8th March and 9th July, 1918, for tramway and motor omnibus employees.

3. The matter was referred by the Ministry of Labour to the Committee on Production for settlement, and representatives of the parties were heard on 26th and 29th August, 1918.

4. The award of 8th March, referred to in the claim, dealt with an application for an advance of wages for male and female employees engaged in connection with tramways and motor omnibus undertakings. The award provided for certain increases to men and women aged eighteen years and over, and to boys, youths, and girls under eighteen years, in those cases where the terms of employment include an undertaking that women should be paid the same rates as the grades of men whose places they had filled, the Committee gave the same advance as to men, that is, a total of 20s. a week over pre-war rates. In the case of women not covered by such an undertaking the Committee gave an increase of 4s. a week, subject to a maximum of 20s.

5. The claim dealt with in the award of 9th July was for an increase of 12½ per cent. upon the present total earnings, or for a standard increase equivalent thereto, and for such a revision of the award of 8th March, 1918, as would provide for equal payment for women as for men, both as regards war wages and basic rates. By their award of 9th July the Committee increased the war wage advance already paid to men aged twenty-one years and over from 20s. to 25s. a week, such advance being intended to cover any claim with respect to the bonus of 12½ per cent. The Committee found that the claim with respect to the bonus of 12½ per cent. in the case of women had not been established, and they came to a similar decision with regard to the application for the revision of the award of 8th March.

6. Subsequently to the issue of the award the employees of the London General Omnibus Company and certain other passenger transport companies in the London area struck work, expressing dissatisfaction with the terms of the award, and pressing for consideration of the question of the relation of the wages of men and women. Negotiations ensued between the employees and the Ministry of Labour, as the result of which the employees resumed work and the matter was referred to the Committee on Production under the headings set forth in Clause 2 of this award. The Committee think it right to point out that the circumstances which have led up to the submission of the present claim and its reference to them have necessarily influenced them in considering and dealing with the matter.

7. In dealing with the claim that equal total payments be made to women as to men for equal work, it is necessary to distinguish between the elements of which these total payments are composed. The payments made to the men contain the following three elements viz. : (1) the base rate of wage ; (2) the additions made thereto since the outbreak of war by way of war bonus or war wage advance, with a view to meeting the increased cost of living ; (3) the addition of 5s. per week granted under the award of July 9, as a war wage advance to include and to be deemed to be in full settlement of any claim with respect to the bonus of 12½ per cent.

8. In considering the last-mentioned 5s. per week regard must be had to the origin and purpose of the 12½ per cent. bonus and to the circumstances which have led to its various extensions. The original grant of the bonus by the Minister of Munitions under the powers conferred upon him by the Munitions of War Act, 1917, and all subsequent extensions of the bonus by orders of the Minister, or

Digitized by Google

by agreements or awards, have been confined to male workers twenty-one years and over. Under these circumstances the Committee, in adjudicating on the claim of women workers on tramways and motor omnibuses by their award of July 9, 1918, did not feel justified in treating the bonus as one which could properly be extended to women or be made the subject of a compensatory advance of wages.

9. Since the issue of the award of July 9, however, the Minister of Munitions, in pursuance of his statutory powers, has granted to female workers employed on or in connection with munitions work an advance of 5s. per week, which may be assumed to contain an element of compensation for their exclusion from the 12½ per cent. bonus. The policy indicated by that grant, and by the reference to the Committee by the Ministry of Labour of the renewed claim on behalf of the women concerned in this case, for some advance in lieu of the bonus, and the circumstances mentioned in Clause 6 of this award, make it necessary for the Committee to consider the position as it at present exists, and they have arrived at the conclusion that the women concerned should have the advance granted by Clause 10 of this award, such advance to be deemed to include and to be in full satisfaction of any claim in respect of the 12½ per cent. bonus.

10. With regard to item (*b*) of the claim so far as it relates to an application for an increase of wages, the decision of the Committee is as follows :—

(1) To those grades of women aged eighteen and over, whose terms of employment include an undertaking that they shall be paid the same rates as the grades of men whose places they have filled, there shall be paid such advance as shall give 25s. per week over the pre-war rates of the grades concerned, payment to be made on the basis of a week of six days or six shifts.

(2) In the case of women aged eighteen and over, not covered by Clause 10 (1), the advances now being paid shall be increased by 5s. a week, subject to a maximum of 25s. a week over the pre-war rates of the grades concerned, payment to be made on the basis of a week of six days or six shifts.

(3) The increases hereby awarded shall take effect as from the beginning of the first full pay following July 9, 1918. They are to be regarded as war wages and recognised as due to and dependent on the existence of the abnormal conditions now prevailing in consequence of the war.

11. As regards item (*a*) of the claim, the award of July 9th, 1918, does not nullify any agreements or undertakings in existence between any of the parties to the award, relating to the payment of women.

12. As regards the items mentioned in Clause 7 of this award and numbered (1) and (2), the claim submitted covering these items is put forward in such a form as to involve the determination of a general principle applicable, if adopted and established, not only to women employed on tramways and motor omnibuses, but to women employed in many other industries. Such a principle can only be decided on a national basis after full, comprehensive, and detailed investigation, with due regard to the far-reaching financial and economic considerations involved, and after hearing all interests that would be affected, including those women (if any) engaged in other industries, whose interests might be considered by them to be affected. The Committee, therefore, recommend that the whole question of women's wages and advances should be made the subject of a special inquiry, in which women can take part, and at which all the facts and circumstances which must be taken into account before any general guiding principle can be safely or properly formulated, may be fully investigated and considered.

13. In regard to item (*c*) of the claim, the Committee approve of the principle that when general changes of wages are under consideration the wages of women, as well as men, should be considered, and they recommend that the parties should formulate an agreement, providing for a regular procedure for the periodical consideration and review of wages in the industry concerned.

14. As regards the claim submitted in the case of the Croydon Corporation for the extension to that authority of the awards of 8th March and 9th July, the Committee suggest that the parties should meet with a view to arriving at a settlement between themselves on the matter. If any points then remain on which the parties are unable to agree, it shall be open to either side to ask the Committee to give a decision thereon, and, if necessary, to arrange for a further hearing to afford the parties an opportunity of stating their case before the Committee.

GEORGE S. GIBB.
WILLIAM W. MACKENZIE.
JOHN M. DENNY.
F. B. BUTTON.
JOHN BARKER.

THE COMMITTEE ON WOMEN'S AND MEN'S WAGES.

On Thursday night also the following official announcement was issued :

The Government have decided to appoint a Committee "to investigate and report as to the relations which should be maintained between the wages of women and men, having regard to the interests of both, as well as to the value of their work. The recommendations should have in view the necessity of output during the war, and the progress and well-being of industry in the future."

The Committee will consist of Mr. Justice Atkin (Chairman), Dr. Janet Campbell, Sir Lynden Macassey, K.C., Sir W. W. Mackenzie, K.C., and Mrs. Sidney Webb. Lieutenant-Colonel Sir Matthew Nathan (Secretary to the Ministry of Pensions) has been appointed as Secretary to the Committee.

Communications on matters concerning the Committee should be addressed (till further notice) to the Secretary, No. 2, Whitehall Gardens, S.W.1.

OMNIBUS DIRECTOR'S STATEMENT.

The following letter from Mr. William C. Burton, resident director of the London General Omnibus Company, and of the Underground Electric Railways of London (Limited), in reply to a letter from Mrs. Fawcett, appeared in *The Times* on Wednesday. The letter covers several points of interest :—

"Into the abstract social and economic question of equal pay for equal work I do not desire to enter. But Mrs. Fawcett, in her letter of August 24, makes more than one mistake as to the facts, and with your permission I desire to set them right.

Mrs. Fawcett states that when the women took up the work of conducting omnibuses they were promised that they should be paid at the same rates as men. This is not correct regarding war bonus. Before any women were employed the matter was fully discussed between the Omnibus Company and the London and Provincial Union of Licensed Vehicle Workers, which represents the employees, and which the women have joined. The following are the relevant sections of the understanding arrived at at a meeting on January 31, 1916 :—

(*a*) That, as soon as it is practicable after the termination of the war, the women will be replaced by men.

(*b*) That the rate of pay for women shall be the minimum rate for the men they replace, provided always that the work done by the women shall be identical with that previously done by the replaced male employees. If the circumstances are such that this cannot be done, then the particular problem will be brought to the attention of the employees' representatives for the purpose of adjustment.

(*c*) That no war bonus will be paid to women.

No other agreement as to pay of women exists.

In spite of the agreement that women should receive no war bonus this company has offered no opposition to the reference of the matter to the Committee on Production. As the result of several submissions and awards, which the company have loyally obeyed, the women since March, 1918, have received £1 a week war bonus, the same as was paid to men. After a further hearing on July 2, the Committee on Production decided that the bonus to men should be increased to 25s., and that the bonus to women should remain unaltered at 20s. This award also the company have loyally obeyed.

Mrs. Fawcett is also in error in thinking that Sir George Askwith's Committee has supported the view that any promise has been broken. When the women struck, Sir George Askwith consented that the case should be reopened before the Committee on Production. It was heard by the Committee yesterday (Monday), but no decision has yet been given.

Mrs. Fawcett apparently agrees that if the women did strike without notice censure was deserved. She believes, however, that they did not do so. She has been informed that at the end of July women conductors held a meeting of protest and announced their intention of "taking drastic action" on August 16 if their protest received no attention. It did receive no attention. If the women conductors held a meeting of protest at the end of July, this fact was not communicated to the company or to any of its officials. The facts are as follows :—

After the Commmittee on Production rejected the women's claim for the full 25s. bonus, the employees' representatives invited us, on August 2, to consider the case. The company immediately acknowledged this letter, but as the proposal was one to reopen a national award it was necessary to consult the other employers before giving a final answer. This consultation required a little time, but on August 16 the unions were advised that, while we saw no reason to revise so recent an award, we should be willing to meet them and hear their views. No answer was returned, but a strike took place on the 17th.

Mrs. Fawcett uses the phrase 'the basic needs of subsistence.' The phrase has no relevance to the women conductors employed by this company. At the time they struck their average earnings for a six-days' week were 63s. (43s. wages and 20s. bonus). If they work less than a full week their earnings are reduced proportionally."

## REDUCTION OF TRAMWAY SERVICES.

Huddersfield Town Council have decided to suspend the Sunday services so long as the present restrictions on coal consumption continue. The Tramways Committee had proposed a shortening of services on week days and Sundays. An amendment, moved and seconded by Labour members, to continue the Sunday services was negatived by a considerable majority.

The Yorkshire (Woollen District) Electric Tramways, Ltd., are about to reduce their services, the reason assigned being the military call-up.

At Burton-on-Trent cars are to cease running at 9 p.m. on weekdays, and 8 p.m. on Sundays, and the service between Burton-on-Trent and Ashby-de-la-Zouch is to be reduced.

**Accident in a Narrow Road.**—At an inquest upon a child, aged two years, who was knocked down by a tramway car at Gateshead, the coroner commented on the narrowness of the thoroughfare where the fatality occurred, and remarked that many an accident would have been prevented if the road had only been of greater width.

Digitized by Google

## STRIKE ON THE TUBE RAILWAYS.

The strike of tramway and motor omnibus workers (recorded in the last issue of the TRAMWAY & RAILWAY WORLD) had scarcely concluded when another strike broke out in the traffic industry—a strike of the workers on the tube railways. A larger proportion of the employees remained at their posts, and the cessation of work was of shorter duration than in the case of the former strike. Like its predecessor, it commenced on a Saturday and was undertaken, generally speaking, without any preliminary backing on the part of the trade unions concerned. It arose also out of a question of wages, owing to the dissatisfaction felt among the women employees of the tube railways at having only received a bonus of 12s. 6d., as against 25s. awarded to the men employees, and to the wish to assert the principle of equal pay for the same class of work, whether done by men or women. The services were considerably interrupted. Several stations had to be closed and access to others had to be suspended at times, owing to the difficulty of dealing with the traffic. The District and Metropolitan electric railways were not affected by the strike. Nor were other railways, with the exception of the Great Western. A number of the women workers on the latter left work at Paddington and Old Oak Common. On Sunday at a meeting of railway workers a resolution in favour of "equal pay for equal work" and "the same war wages for both men and women railway workers" was passed. On Monday the train service was kept up very well, this result being facilitated by the closing of several of the less important stations on the Bakerloo, Piccadilly, Hampstead and City and South London tubes. Steps towards a settlement were taken, and representatives of the strikers visited the Railway Executive Committee and the Industrial Commissioner's Department of the Ministry of Labour. Subsequently, a meeting of the strikers was held, and it was decided pending negotiations, which were to be opened provided the strike was abandoned for the time being, to resume work on Wednesday. This decision was acted upon and indeed in some cases anticipated, many of the strikers taking up their duties on Tuesday. The resumption of work is attributed to the firm attitude of Mr. J. H. Thomas, M.P., and the Executive of the National Union of Railwaymen, who declined to attempt any negotiations until the strikers went back to work. Mr. Thomas implied that he was prepared to negotiate for the strikers when they had gone back to work. The claim for "equal pay" will presumably come before the Committee which the Government has appointed (as stated in another column) to inquire into the subject of women's wages.

## MISCELLANEOUS NEWS AND NOTES.

**Mounting Cars in Motion.**—Five boys summoned at Llanelly for mounting tramway cars in motion were ordered to pay 2s. 6d. costs each. At Rhondda two youths were fined 10s. each for hanging on the back of a car.

**Institute of Metals.**—The autumn meeting of the Institute of Metals will be held on September 10 and 11, in the rooms of the Chemical Society, Burlington House, Piccadilly, W., when a number of papers will be read.

**Special's Refusal to Pay.**—An inspector of special constables, who refused to pay his fare on the tramway car at Wallasey, as a protest against the denial of free travelling to such inspectors while on duty, was fined 5s.

**Proposals for Aberdeenshire.**—The construction of a light railway from Ballater to Braemar and an extension of the proposed Echt and Skene light railway have been suggested by district committees of the Aberdeenshire County Council.

**Fined for Ringing Bell.**—A passenger was fined 10s. for starting a car by ringing the bell of a Rhondda tramway car. It was stated that defendant rang the bell without being told to do so and that a woman, who was alighting, was dragged some distance.

**An Unusual Obstruction.**—Tramway traffic was held up at Keighley owing to a van containing furniture falling from a motor wagon on to the line. The furniture had to be taken from the van before the latter could be removed from the track.

**A One Day's Strike** on the tramways at Swansea on Thursday in last week was terminated the following day by the employees returning to work on the instruction of the national executive of their trade union organisation, pending the arbitration of the Committee on Production on the points in dispute.

**Boys Take Possession of Car.**—At Aberdeen five boys entered a tramway depot, mounted a car and succeeded in driving it as far as the entrance, where they were stopped by the staff. At the police court, subsequently, one was put on probation, and the others discharged with a caution.

**New Electric Railway in Mexico.**—It is reported that the Department of Communications and Public Works of Mexico has received an application for a concession for the construction of an electric railway connecting Tampico with Mexico City, passing through Vera Cruz and the capitals of the States of Flaxcala and Puebla and other important towns.

**Hydro-Electric Power Scheme.**—A remarkable scheme for the development of hydro-electric power to be derived from the waters of the Liffey, is now under consideration. The promoters are the Dublin & Lucan Electric Railway Company, whose secretary, engineer and manager, Mr. D. McDowell Grosart, J.P., suggested the idea, when he was appointed to his present position a few years ago. The probable cost of the scheme is put at £50,000. The saving of coal which would be effected by the scheme is estimated at over 16,000 tons per annum.

**Union Badges Disallowed.**—By a recent order of the Sunderland and District Tramways Company no driver or conductor is allowed, says the *Sunderland Echo*, to wear any flag, badge, etc., with the exception of a discharged soldier's badge or wound stripes The members are debarred from wearing their own union badge. The order is causing a good deal of dissatisfaction.

**Industrial Reconstruction.**—A series of conferences have been arranged by the Industrial Reconstruction Council to take place at 2 and 4, Tudor Street, E.C., on alternate Tuesdays in September, October, November and December, at 6 p.m. The first will be held on September 10, when the subject of Works Committees will be introduced by Mr. Robe.t Wilson, of the Ministry of Labour.

**Coal Economy in Scotland.**—The Scottish Tramways Advisory Committee has been considering the need for a drastic reduction in the consumption of coal, and has decided to enquire of tramway authorities in England in regard to methods of saving. The information is sought with a view to meeting the request it is anticipated will shortly be received for a reduction of the consumption of coal by tramway authorities in Scotland.

**Company's War Donations.**—At the half-yearly meeting of the Tyneside Tramways and Tramroad Company, Ltd., it was agreed to make a donation of £10 10s., to the funds of the Newcastle Infirmary, and to sanction the contribution to charitable purposes in connection with the war of a sum not exceeding £300. Of this amount £100, on the suggestion of Mr. J. H. Armstrong, one of the directors, is to be specially earmarked for the local Orthopædic Hospital.

**Brisbane Tramways.**—The Brisbane Tramways Company has received advice by cable to the effect that the two Tramways Bills mentioned in THE TRAMWAY AND RAILWAY WORLD of July 13th, have passed the Legislative Assembly and have been read a first time in the Legislative Council with the single modification that the Purchase Bill has been amended so as to give the company the option of payment either in cash or debentures.

**A New L.G.O.C. Advertisement.**—A noteworthy addition to the London General Omnibus Company's newspaper advertisements to the travelling public has just been issued. "Passengers are advised to state their destination when tendering the fare, so that the conductor may know whether the fare is correct, and issue the proper ticket." It is pointed out that this saves the trouble of checking the passengers again to issue further tickets where there is over-riding and that it is in the interests of the public.

**Killed by a Trolley Head.**—At Blackpool last week a passenger on the top of a Corporation tramway car was struck by a trolley head that had become detached, and so severely injured that death followed almost immediately. At the inquest it was stated that the trolley pole left the wire, and, catching against the wire strands, the trolley head was pulled off, and struck the deceased on the head. It was pointed out that the method of securing the trolley head was the best that was known. The verdict was "accidental death."

**Wages Demand at Edinburgh.**—The Edinburgh tramway workers have adopted a resolution expressing dissatisfaction in regard to the present position of the women workers, and in favour of definite settlement for equal rate of wages and bonuses without allowing any side issue to enter into the claim. It was remarked with reference to the Corporation taking over the system that the employees should begin to make arrangements as to how they were going to meet the Corporation in regard to wages and shifts, and that they must get ready to go over to the Corporation as they wanted, and not as the Corporation wanted to take them.

**Westinghouse War Relief.**—A statement of receipts and payments of the British Westinghouse War Relief Fund from August 22nd, 1914, to June 30, 1918, has been issued. Of the total contributions amounting to £57,253, £38,061 have been contributed by the employees and £19,191 by the Company, and out of this sum £38,147 have been paid to dependents, £12,392 set aside for a disablement and dependents' fund, and £2,479 spent in donations to local and national funds and Christmas gifts. The number of dependents in receipt of weekly relief is 822 and the number of employees who have joined His Majesty's Forces is 3,461. The casualties have, unfortunately, been exceedingly high.

**Life-Guard Did Not Act.**—At an inquest at Burnley, in regard to a child who was killed through being knocked down by a tramway car, it appeared that the life-guard had not caught the deceased, although it was found to be in good working order. Mr. H. Mozley, the corporation tramways manager, stated (as reported in the *Burnley News*) that in 99 per cent. of the cases lifeguards did operate successfully, and had resulted in saving many lives and limbs, but occasionally they had a failure, as in that case. The authorities could provide nothing better. The Board of Trade had approved that lifeguard. He did not know of a better. It was in universal use in Great Britain, and also in foreign countries.

**Iron and Steel Scrap.**—A new order has been issued by the Ministry of Munitions controlling cast iron scrap and making an addition to the general permit of November 1, 1916, fixing the maximum prices for various grades. Certain changes are made in the regulations with regard to second-hand rails and wrought iron scrap. All communications with reference to the order should be addressed to the Controller of Iron and Steel Production, Room 101, Ministry of Munitions, 8, Northumberland Avenue, W.C.2. The Ministry has also issued an order providing that every person owning iron or steel scrap, whether metal, machinery, plant, or constructional steel or iron work, shall sell such scrap when required by the Controller within thirty days. All applications under this order should be made to the Controller of Salvage and Stores, Ministry of Munitions, Whitehall Place, S.W.1., and be marked "Iron and Steel Scrap."

Digitized by Google

**Fined for Negligent Driving.**—A driver in the employ of the London United Tramways, whose car collided with a lorry with the result that the driver of the lorry received fatal injuries, was at the Croydon Petty Sessions fined the maximum penalty of £5 for negligent driving.

**Birmingham Power Supply.**—In view of the difficulties which Birmingham has experienced during the war in the matter of meeting the greatly increased demand for electric power for the tramways as for other things, it is encouraging to note that the Ministry of Munitions have given sanction to a large increase of the electric generating plant, at a cost which is put at over a million-and-a-half sterling.

**Runaway Car Stopped by Police Constables.**—What might have been a serious accident at Highgate on Monday was prevented by presence of mind and promptitude of action on the part of two Metropolitan police constables. A tramway car was seen to be out of control on a slope. The constables jumped on a car that was close behind. The driver put on speed and overtook the runaway car, from which several of the passengers had already jumped in alarm. Then one of the constables threw the chain used to bar the entrance to the car so that it fastened itself to the tail of the runaway, which was eventually brought to a standstill. Unfortunately, one of the constables was injured and had to be taken to hospital.

**Women as Tramway Inspectors.**—A deputation from the Disablement Sub-Committee of the Plymouth War Pensions Committee suggested to the Plymouth Tramways Committee the appointment of discharged disabled men to the post of inspectors, instead of women. The reply was that the Tramways Committee had always considered the claims of discharged Service men in making appointments, and that up to the present they had given employment to over 70 such men. In the present instance, acting under the instructions of the National Service Department, and having regard to the nature of the duties, the Tramways Committee were of opinion that women could best fill the position of inspectors.

**London School of Economics.**— The calendar for 1918-19 of the London School of Economics and Political Science (University of London) shows courses of study which seem to be more numerous and complete than ever before. The subjects dealt with include a number of special interest to tramway and railway men, as, for example, general economics with special reference to transport, accounting, scientific management in factories, railway operating, law of carriage, the railway system as a wealth-creating machine, cost accounts and efficiency methods and railway rates and charges. It is noted that in view of the large number of railway students of the school who are now serving with the colours the activities of the Railway Students' Association are at present in abeyance.

## FINANCIAL REPORTS AND MEETINGS.

**Bolckow Vaughan and Co.**—A dividend of 8 per cent. is announced.

**Tyneside Tramways and Tramroad Co., Ltd.**—A dividend at the rate of 5 per cent. per annum has been sanctioned.

**Shahdara (Delhi) Saharanpur Light Railway.**—A dividend (free of tax) at the rate of 7 per cent. per annum is recommended.

**Para Electric Railways.**—A dividend is announced of 6 per cent. per annum (3s. per share) less tax on the ordinary shares for the half year. A year ago the rate was the same.

**Glasgow Subway.**—An interim dividend of 1¼ per cent. is announced on Preference shares, against 1 per cent. last year. The increase in dividend, it is stated, is made in order to equalise more nearly the two half-yearly payments, and must not be taken as an indication of an increase in the dividend for the full year.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended August 28, amounted to £69,986, an increase of £12,367 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to August 28 (twenty-one and a half weeks), the total receipts were £1,385,831, an increase of £186,955 on the corresponding period of 1917.

**Lisbon Electric Tramway.**—The accounts for 1917 show a net profit, after deducting interest and sinking fund for debentures, of £16,678, plus £9,224 brought forward. From this amount £10,000 has been placed to the credit of depreciation and reserve, £12,767 is required for preference dividend for the six months to June 30, 1918, and the balance of £3,135 is carried forward.

**Fraser and Chalmers.**—A circular to the shareholders of Fraser and Chalmers shows that the original scheme providing for the purchase of a large proportion of its assets by the General Electric Company has been altered. It was at first intended that the General Electric Company should acquire the works at Erith, together with the manufacturing business and the goodwill, except the mining machinery business. On drafting the agreement it has been found, however, that the retention of the mining machinery business by Fraser and Chalmers presented so many difficulties in definition that a modification of the whole basis of the sale had to be adopted. The agreement now provides for the transfer to the General Electric Company of the entire works at Erith, and all the manufactures, together with goodwill. The only business to be left with Fraser and Chalmers is that of merchant trading.

**Aberdeen Corporation Tramways.**—At a meeting of the Aberdeen Town Council, the Tramways Committee recommended that the third of the free surplus revenue of the tramway undertaking for the year, amounting to £4,070 13s. 8d., should be applied as follows: to the common good of the city, £2,000; in carrying out city improvements, £2,070 13s. 8d. Councillor Robertson, in presenting the tramway accounts and the recommendations, said the difficulty with the department was not the question of how to increase the receipts, but rather how to carry the passengers. They had one new car almost ready, and two others were being built, also spare parts and material. Mr. Pilcher, in his twelve years' service, had shown marked ability and skill, not only as manager, but as engineer, and they wished him all success in his promotion. The success of the service was due to splendid organisation. The Lord Provost seconded, endorsing the appreciation of the manager's excellent work. The recommendation was adopted.

## PERSONAL.

**Mr. R. Watson** has taken up his appointment as manager to the Carlisle Tramways Company, Ltd.

**Mr. Edward Germain,** for many years an inspector of the Birmingham Corporation Tramways Department, has died at the age of 58.

**Mr. Ernest Hatton** has, we understand, been acting as district engineer in the coal economy campaign for the important Tyneside area for some time.

**Mr. H. P. Stokes,** M.I.E.E., A.M.I.Mech.E., general manager and electrical engineer to the Bexley Council electricity and tramways department, and Dartford light railways, has been appointed district engineer in connection with the coal economy campaign.

**The Late Major Bertram Hopkinson.**—It is with regret that we record the death of Major Bertram Hopkinson which was caused by a flying accident in the north-east of London. Since 1916 Major Hopkinson was Deputy-assistant Director to the Air Ministry, and from 1903 onwards he held the position of Professor of Mechanism and Applied Mechanics in the University of Cambridge. Major Hopkinson was a member of the famous family of that name, who have done so much for applied science, and particularly for electric traction, his father being the late Dr. John Hopkinson, F.R.S. For some time he was a consulting engineer, and in partnership with Mr. Charles Hopkinson and Mr. Ernest Talbot he carried out the design of the electric tramway systems of Leeds and Newcastle. He was a Fellow of the Royal Society and was last year made a Companion of the Order of St. Michael and St. George.

## CONTRACTS AND ORDERS.

**Bury St. Edmunds Guardians** are contemplating the purchasing of a motor engine.

**King's Lynn Town Council** have asked for a report as to the use of a motor tractor.

**Thornaby Urban Council** propose to obtain a motor tractor for hauling a fire engine.

## DEPRECIATION & WASTING ASSETS

AND THEIR TREATMENT IN COMPUTING ANNUAL PROFIT AND LOSS

*By P. D. LEAKE,*

*Fellow of the Institute of Chartered Accountants in England and Wales; Fellow of the Institute of Directors; Fellow of the Royal Statistical Society.*

Particular attention is directed to a chapter on Depreciation and Controlled Establishments under the Munitions of War Act, 1915; and it may be added that the views of the Ministry of Munitions as to the proper treatment of Depreciation of Plant coincide with the views advocated in this work.

**In demy 8vo, 10/6 net, cloth, 257 pp.**

## WEEKLY LIST OF TENDERS INVITED.

### CITY OF MANCHESTER.

The Electricity Committee of the Manchester Corporation are prepared to receive Tenders for the supply and delivery of a 3½-TON ELECTRIC TIPPING WAGON.

Specification and Form of Tender may be had on application to Mr. F. E. HUGHES, Secretary, Electricity Department, Town Hall, Manchester.

Further particulars and information can be obtained on application to Mr. S. L. PEARCE, Chief Engineer and Manager, Dickinson Street, Manchester.

Tenders, duly endorsed, and addressed to the Chairman of the Electricity Committee, must be delivered at the Town Hall not later than 10 o'clock a.m. on Friday, September 13th.

The firm entrusted with this work will be required to enter into a contract to be prepared by the undersigned.

The Corporation do not bind themselves to accept the lowest or any tender.

THOMAS HUDSON,
Town Clerk.

Town Hall, Manchester,
August 21, 1918.

### ATHERTON URBAN DISTRICT COUNCIL.

#### Electricity Department.

The above Council invite tenders for the supply of two 110 kw. Single-phase Transformers.

Full particulars may be had from Mr. B. Darby, Resident Electrical Engineer.

Tenders sealed and endorsed should be sent to the undersigned not later than Monday, September 16th.

WILLIAM GARNETT,
Clerk.

Town Hall, Atherton,
August 30, 1918.

#### Electrical Accessories.

The Commissioners of His Majesty's Works, etc., are prepared to receive tenders before 11 a.m. on Thursday, September 12, 1918, addressed to the Secretary, H.M. Office of Works, Storey's Gate, London, S.W.1., for the supply of Electrical Accessories.

Forms of tender, etc., may be obtained on application to The Controller of Supplies, H.M. Office of Works, etc., King Charles Street, Westminster, London, S.W.1.

## POSITIONS VACANT.

### LEITH CORPORATION ELECTRICITY DEPARTMENT.

Switchboard Attendant for D.C. general supply and traction switchboards. Wages 43s. 6d., plus 12½ per cent. for seven 8-hour shifts.—Apply, stating age, particulars of experience, to BURGH ELECTRICAL ENGINEER, Leith.

#### Platelayer.

Platelayer wanted, with all round experience of the repair and maintenance of tramway track.—Apply with references, stating inclusive wages required, to Tramways Manager, Egerton Street, Heywood, Lancashire.

### COUNTY BOROUGH OF SALFORD.

#### Electricity Department.

Applications are invited for the position of Boiler House Superintendent to take charge of Lancashire and Water-tube Boilers, including operation and maintenance. Applicants must have practical knowledge of boiler house operation and be able to carry out efficiency tests and the testing of fuel.

Applications, stating age, qualifications, and salary, to be forwarded to the BOROUGH ELECTRICAL ENGINEER, Frederick Road, Salford, not later than Monday, September 16, 1918.

L. C. EVANS,
Town Clerk.

#### Charge Engineer.

Charge Engineer wanted for Certified Undertaking; turbines and water-tube boilers. Salary £3 7s. 6d. per week.

Apply, with full particulars, stating age (not less than 26), experience, etc., to—

THE BOROUGH ELECTRICAL ENGINEER,
Electricity Works, Bedford.

#### Shift Engineer.

Shift Engineer wanted in combined A.C. and D.C. station. Salary £175 per annum.—Apply, stating age and experience, to BOROUGH ELECTRICAL ENGINEER, Electricity Works, Dover.

## LET THE PUBLIC KNOW.

THE uses of advertisement have, generally speaking, been much more studied and are much better realised on the other side of the Atlantic than on this side. This remark applies to the traffic industry as to others; and indeed to a greater extent than to many. A recent issue of the "Electrical News," of Toronto, provides an illustration of the use of advertisement in connection with a subject which is of pressing importance in the Dominion as well as in the Home country at the present time. There, as well as here, the unprecedented increase in working expenses, whether represented by a rise in the cost of materials or in wages, makes a considerable increase of fares inevitable if traffic undertakings are not to be conducted at a loss, whether the undertaking be in the hands of a municipal authority or a private company. These columns have borne witness week by week to such increases in various localities throughout the country. In many cases these increases have been received with a certain amount of local grumbling. Here and there, too, long-suffering citizens write to their local newspapers blaming the Councils for yielding to trade union agitation, or for granting an increase of salary to hard worked officials. Or, if it is the case of a company, then there is an outcry about "dividend hunting" from a different class of the community. Of course it is sometimes said to be an Englishman's privilege to grumble. But often he would grumble much less if the reasons for the things which he regards as grievances were explained to him. This fact is better understood in Canada where they do make some effort to explain to the public the cause for the increase of fares in tramway services. The Montreal Tramways Company, and the Cape Breton Electric Company, for instance, have recently published a series of advertisements in the press explaining in simple and telling language the reasons for an increase of the fares in their undertakings. As far as our recollection goes, no advertisement of this kind has ever appeared in the columns of any newspaper in the United Kingdom. Certainly in most cases reasons for an increase receive no other explanation than a few words in a speech of the chairman of a tramway committee or of a tramway company. Surely it is not too much to hope that in the future the application of advertising to traffic problems will be more fully understood by the corporations and companies concerned. And we may add that though the question of "what to do" in traffic advertising depends on the circumstances of the particular case, an excellent lead in regard to "how to do it" has already been given in the publicity of the London General Omnibus Company and allied concerns.

## AFTER-WAR PROBLEMS: MATERIALS AND TRANSPORT.

£60,000,000 NEEDED FOR ROAD RECONSTRUCTION.

The Ministry of Reconstruction is issuing a series of pamphlets dealing with problems of reconstruction. The first of the series on "The Aims of Reconstruction," explains briefly the objects of the Ministry, and deals with various subjects. The most important is that of shipping; for, until we know roughly how many ships we are going to have at our disposal, we cannot go far in our arrangements either for bringing home the armies from abroad or for bringing in the raw materials in order to provide men with work. At present the greater part of the shipping of the allied countries, and some neutral shipping also, is working under a joint allied control. This has been found by experience to be absolutely necessary during the war to prevent waste and overlapping, and to secure that the best use is made of what shipping is available. It may be equally necessary in serving the same objects during the after-war period.

The question of the importation of raw materials is next in importance. British requirements will need to be ascertained, analysed and graded in order of urgency and intrinsic importance. An order of precedence will have to be established so as to enable the most immediate national needs to be met first. The aim after the war must be not only to increase the quantity, but also to improve the character of production.

When the raw material has been apportioned, it must be carried to the place where it is needed. The next phase in the problem is, therefore, that of transport. The future of the railways is in itself a large question, but it is bound up with a number of others, amongst which the development of efficient transport systems in rural areas is among the most important. The war has thrown new light on the possibilities of light railways. Our canal system has been too long neglected, and is capable of renovation. Civil aerial transport will be a factor to be reckoned with after the war, and the subject has already been investigated by a special Committee. Another contribution to the same problem will be made by the Committee to consider the disposal of our war stores. The end of the war will find an immense amount of material of all kinds in the hands of the Government, including tens of thousands of motor vehicles. The recommendation of this Committee will have a material bearing on the transport question. Lastly, there is the question of roads. The highways of the country have been allowed to fall into disrepair during the war, and it is estimated that some £60,000,000 will be required to renew them.

In summing up the position that will exist after the war, the Ministry of Reconstruction say it must never be forgotten that reconstruction at home is only one aspect of an even larger question; the problem of international recuperation, of the re-equipment and reprovisioning of Europe and the world. There is Belgium and the devastated French territory to be restored; there is the rest of France, Italy and Serbia; there are our own Dominions and India; there are the other Allies. No single problem of reconstruction can be solved if it is regarded solely as a domestic problem; to deal with the task in front of them when peace is made will demand from the Allies the same good faith and loyalty, and the same forethought for each other and themselves that has maintained their union during the war.

## AN INDEX OF MANUFACTURERS.

Information has been received, says the *Board of Trade Journal*, that the "Office National du Commerce Exterieur" Department of the French Ministry of Commerce and Industry is compiling an official index of all firms in France engaged in export trade for the purpose of answering enquiries received as to names of French manufacturers or suppliers of particular goods. Firms desirous of having their names and products recorded are required to pay a nominal fee of 5 francs for each entry. It may be of interest to manufacturers in the United Kindgom to add that an Index or Directory of British and Irish Manufacturers is in process of compilation by the Department of Overseas Trade for official use only in the Department and by His Majesty's Trade Commissioners, Consular Officers, and other Correspondents of the Department abroad in dealing with enquiries which they frequently receive for the names of makers or suppliers of goods in this country for delivery either now or after the war. Further information as regards its objects and scope can be obtained by application to Department of Overseas Trade Development and Intelligence, 73, Basinghall Street, E.C.2.

## DISABLED SERVICE MEN.

OPENINGS IN MUNICIPAL WORK.

The Minister of Pensions has addressed to local War Pensions Committees a circular with reference to the employment of disabled officers and men in the local public service. Local authorities have been approached and the Associations of Municipal Corporations, County Councils, Urban District Councils, and Rural District Councils have passed a resolution in favour of giving preference to disabled men in the filling up of vacancies on the clerical, technical, and manual working staff of municipalities, subject to the reinstatement of former employees now on service.

The circular states that among the posts available to disabled men in the local public service are the following :—

ADMINISTRATIVE AND CLERICAL STAFF.—Clerk's, treasurer's, accountant's, and surveyor's offices, rate and toll collectors, building inspectors.

ROADS AND STREETS.—Surveyors, road and highway inspectors, foremen, roadmen, paviors, engine drivers, timekeepers, carters, lamplighters, labourers, night watchmen, yardmen, etc.

ELECTRICITY SUPPLY.—Managing and supervisory posts, collectors, engineers, engine men, fitters and repairers, foremen, timekeepers, carpenters, painters, stokers, labourers, yardmen, etc.

TRAMWAYS.—Managing and supervisory posts, drivers, conductors, foremen, yardmen, timekeepers, engineers, blacksmiths, carpenters, painters, labourers.

STORES.—Storekeepers, watchmen.

The Minister of Pensions expresses himself in the circular as anxious that a special effort should be made to secure disabled officers and men suitable employment, offering a reasonable prospect of permanency. The Government, he states, have recognised the claims of these men to employment in the service of the State, and special arrangements are being made to give them a preference in suitable cases for temporary vacancies. A committee is now considering the question of the further employment of the men, subject always to the reinstatement of former officials now on war service.

It may be remarked that, although the circular mentioned has been directed with a view to influencing the action of local administrative bodies, the considerations apply in a much wider circle, including public utility concerns under private ownership, such as railway, tramway, and omnibus undertakings.

## PROPOSED SALE OF WAR MATERIALS.

HEAVY FINE FOR UNLAWFUL DEAL IN RAILS.

At the Westminister Police Court, on Wednesday, before Mr. Francis, Charles Read, of Victoria Street, Westminster, was summoned for having between May 1 last and June 20 unlawfully, without a permit from the Ministry of Munitions, entered into negotiations for the sale of war material—namely, second-hand rails—with John Hindley Walker, Dale Street, Liverpool, contrary to the Defence of the Realm Regulations. Walker was summoned for aiding and abetting.

For the prosecution it was stated by Sir Archibald Bodkin that the object of the Regulations was to prevent prices being run up by intermediate parties with reference to the sale of war material. These old rails were used for national purposes. In the present case the rails were owned by a certain firm, and Read contracted to purchase 10 tons at £14 10s. per ton, and secured the option for buying 150 tons. Instead of re-selling direct to Mr. Taylor, representing the North of Ireland Shipbuilding Company, who required the rails, he sold them to the defendant Walker at £15 a ton, who offered them to Mr. Taylor at £17 per ton. To cover up the increase of £2 10s. per ton, the owners of the rails were asked to put on the form on which they applied for the permit to sell a higher price than that at which they had sold, so that the Control would allow the goods to be delivered to the North of Ireland Shipbuilding Company. The proposal was that the original owners would receive the money from the company in payment and then ladle out the profit to Read, who in turn would share with Walker.

The Magistrate said that the Regulations had been infringed in a flagrant way. He fined Read £100 and Walker £75, and ordered each of the defendants to pay 10 guineas costs.

## A CANADIAN TRAMWAY ADVERTISING CAMPAIGN.

A noteworthy advertising campaign undertaken by the Montreal Tramways Company is described in the *Electrical News* of Toronto. It appears that the Montreal Tramways Commission has conceded the company the right to increase the fares, but an effort is being made to prevent the carrying out of the project. With a view to bringing home the justice of their case to the public, the company is advertising in the newspapers. It is pointed out how the unprecedented increase in the cost of materials eats up earnings rapidly. It takes nearly twice as many tickets to pay for the Montreal Tramways Company's supplies as it did five years ago. A detailed list of increased prices, as compared with the prices current in 1913, is given. Another advertisement contains a list of fares recently allowed to be charged on street railways in the United States. Advertising on similar lines is also being done by the Cape Breton Electric Company, which operates a tramway at Sydney, Nova Scotia. In one of a series of "one minute tram talks," it is urged that "Your prosperity and ours go hand in hand" and "if we are not prosperous we cannot furnish good service."

## DUBLIN TRAMWAYS AND HOUSING.

The Irish capital is the first place where a report has been presented upon housing needs and the part the tramways must take towards carrying out the very extensive scheme required. The presentation of the report is due to the Irish Local Government Board stepping in with a view to atoning for the remissness of the local authority. It was prepared for the chief secretary by Mr. Cowan, engineering inspector to the Board, who discloses that the needs of the city are partly attributable to the failure of the Council to carry out a scheme which they had adopted on the recommendation of a conference in 1903. That conference advised building on the outskirts of the city, and the provision of cheap means of transit, a course which it was believed would not be difficult to arrange with the tramways company or the railway companies.

Tramway extension constitutes an essential portion of a scheme which has been prepared. The provision is advised of a unified control in respect to housing, transit, etc., over an area of three miles radius from the centre of Dublin, which would embrace 18,000 acres, and at twelve houses to the acre would suffice for more than a million people. Some 16,500 houses are needed, and the three mile radius would provide for 12,000 houses. It is suggested that a start be made with blocks of 400 houses each at Marino, Drumcondra, Catra, and Crumlin, and that early expansions of the tramways be arranged to serve the latter two areas conveniently. A satisfactory feature of the report is that it provides a safeguard to what Mr. Cowan regards as a weakness of municipal enterprise, in that the latter opens the door to the return of representatives who concern themselves with reducing rents and fares to an uneconomical figure. Mr. Cowan expresses the opinion that the houses should be erected by a board representing the Government, the City of Dublin, the urban district of Rathmines and Pembroke and Dublin county, and holding office for ten years. For the building and management of the houses it is advised that advantage should be taken of the services of societies of public utility, the property being sold as soon and as far as possible under the Small Dwellings Acquisition Act, or otherwise by some special authority not likely to be coerced by ill-informed and hasty public opinion. If the recommendations meet with the approval of the Government, it is likely that the Dublin United Tramways Company may find it possible to extend their operations to housing. Some years ago the directors erected houses for their own employees.

## THE BRITISH SCIENTIFIC PRODUCTS EXHIBITION.

NEW GAS TRACTION EXHIBITS.

Some interesting additions have been made to the section arranged by the Gas Traction Committee at the British Scientific Products Exhibition, which closes to-day (Saturday) at King's College, London. These include the Murphy "Safe" cylinders shown by Lyon, Ltd., of New Bond Street. This is of novel construction, being wrapped with three layers of high tension steel tape. It has been demonstrated before the members of the Gas Traction Committee to be capable of withstanding a pressure of 3,500 lb. to the square inch., and is extremely light in weight (132 lb.). The capacity of the cylinders is 250 cubic feet. Another novelty in high-pressure gas containers was shown by Mr. A. W. Torkington of Stelastic Tyres, Ltd., York Street, London, S.W. This container is composed of close, strong, interwoven steel wire, so constructed that there are no joints, and consequently no weak places. Inside this armoured jacket is a strong rubber tube, so shaped as to give an even pressure against the outer cover. The size of the container shown was 45 inches long by 8 inches in diameter, but larger sizes can be made if desired. No particulars of the capacity were given, but enquiries were invited. A number of model containers of the flexible variety were shown together with specimens of proofed fabric used in the construction of the containers. The British Automobile Traction Company exhibited a model of the composite container as constructed in the works of the East Kent Road Car Company, at Canterbury. The British Rubber Manufacturers Ltd., Lyon, Ltd., and Messrs. Barton Bros., of Nottingham, the pioneers of the flexible container—each exhibited a model of the particular type manufactured by them. An exhibit that attracted considerable attention was the Flugel gas carburettor. This has been specially designed for gas-driven cars, the special nature in its construction being the fact that both the gas and air valves are actually operated by the pedal acceleration. Economy in consumption is thus ensured.

**Road Repairs in Montreal.**—The Administrative Commission of Montreal have been in conference with various public service companies, including the Montreal Tramways Co., on the subject of repairing breaks in the streets. It was agreed to abolish the old fixed rate of $2.50 (10s.) a cubic yard paid by the companies and that the latter pay the cost of repairing the roadways after the excavating. When a company applies to break up a road an estimate of the cost of repair will be made by the engineering department of the city, and a permit granted if there be sufficient money on deposit to cover the cost. No road is to be broken up without a permit except in very exceptional circumstances, such as breaking of water or gas mains.

## THE IMPORTANCE OF TRAMWAYS.

The *Coventry Herald*, although published in one of the great centres of the motor car industry, has no misconceptions as to the part that tramways must take in reconstruction after the war. It forsees a Coventry that will be the administrative centre of a wide area, each part of which will need to be connected with the city by an adequate tramway service; for only in that way can the sense of communal fellowship be developed among all the component units, only in that way can Coventry properly serve the whole of the population within the boundary ring, only in that way can trade be economically supplied with its required labour.

We talk of certain things touching life at all points. Among these is a well-organised tramways undertaking. The time, and therefore money saving aspect, lends itself to much elaboration, and anyone with leisure and inclination could profitably work it out. There is also the social aspect. Tramways bring people closer together, make them better known; they are among the modern assimilating agencies. By shortening distance they tend to break down aloofness, dissipate narrowness of vision, assist visitors to find their social feet. They are a merging and an absorbing force. They are a valuable home factor for they make it possible for fathers to be with their families in the middle of the day and early in the evening. They conserve physical labour and health because they enable the people to live under healthy conditions. There are indeed no limits to the usefulness of tramways. Not one but scores of texts could be furnished for a complete tramway service in any industrial town.

## COAL FOR ESSENTIAL INDUSTRIES.

To meet the crisis which has arisen with regard to the supply of coal to essential industries, and to keep those industries going, the Coal Controller has organised a scheme to level up stocks. In the national interest he is having coal supplied first to those who need it most.

The *Times* reports that manufacturers in all parts of the country are becoming alarmed at their depleted stocks. They know there is an estimated scarcity of coal of 36,000,000 tons, and that the output for last month was 3,300,000 tons short compared with July, 1917. Urgent demands for coal, therefore, are pouring in on the Coal Controller from Lancashire, Yorkshire, Birmingham, Staffordshire, Northumberland, Cumberland, and the Southern Counties. Many great manufacturing businesses are living from hand to mouth, not knowing when their supplies will cease. Others are using up their stocks which were intended for the winter months—when the difficulties of obtaining supplies always increase. All wish to increase their stocks. Fortunately, no crisis due to stoppage has so far been recorded, but the situation will not improve unless the output of coal is greatly increased during the long days and good weather. The Coal Controller's officials realise that it will be necessary to exercise the greatest vigilance day and night, and that the danger will continue to face the nation until the coal output rises by millions of tons.

## REDUCTION OF SERVICES.

Reductions of services continue to be made or proposed in various parts of the United Kingdom. At Newcastle-upon-Tyne the Corporation Tramways Committee have decided on abolishing certain stopping points and making the remainder compulsory. A curtailment of the Sunday service in the interests of economy of coal is a possibility of the near future.

The Wallasey Tramways Committee propose a curtailment of service according to which the last cars would start at 11.30 p.m. week days and 11 p.m. on Sundays.

At Sunderland the Corporation Tramways Committee have been considering the question of the time at which the service shall cease, referred back to them from a meeting of the Town Council, and have decided to recommend 9.30 instead of 9 as the time for the last cars to leave the centre of the town.

The Poole Town Council has again considered the withdrawal of the Sunday service by the Bournemouth Corporation, and has agreed to appoint a committee to meet representatives of the Bournemouth Tramways Committee, and, failing a satisfactory settlement to ask the Board of Trade to receive a deputation.

**Killed While Adjusting the Trolley.**—A fatal accident occurred close to the entrance to a depot of the Hastings Tramway Company last week. The deceased was a woman conductor, who was behind a car changing the trolley head from one wire to another. At the inquest the driver of another car stated that his car was travelling at about two or three miles an hour. When getting to the points it suddenly swerved and took the lines into the depot yard. He saw in front of him a car half-way in and half-way out of the depot gates. He put his brake on as far as he could and reversed his motors. At the same time he shouted to the deceased, who had her back to him, "Look out!" He was about six or seven feet from her By the time his car reached the other car it was only going very slowly, and the buffer of his car threw her against the buffer of the other car and fixed her there. She was taken to the hospital. Witness was so upset at the occurrence that he had not resumed duty since. The jury returned a verdict of "Accidental death, and exonerated everyone from blame, adding a rider to the effect that in future a flagman should be kept at the spot to avoid a repetition of the accident.

## MISCELLANEOUS NEWS AND NOTES.

**Edinburgh to Queensferry Tramway.**—A public inquiry will be held on October 1 into the application of the Edinburgh Corporation for power to construct an electric tramway to Queensferry.

**Injury to Passenger.**—Owing apparently to having leaned over the side of a car and having struck his head against a standard, a passenger was removed unconscious to hospital at Colchester.

**Needless Travelling at Rush Hours.**—The use of the Tramway service by non-workers at the time when the workers are coming home from work is being acutely felt in Sunderland, as elsewhere.

**Tree Falls on Wires.**—A tree falling in a Belfast thoroughfare was arrested by the trolley wires of the tramway. Traffic was suspended until the removal of the obstacle by the workmen of the tramway department.

**Moon Chart.**—We have received from Messrs. C. A. Vandervell and Company, of Acton, copies of their moon chart for September The chart, which is compiled by their chief engineer, Mr. A. H. Midgley, forms a very convenient record.

**To Save Waste Paper.**—With the object of saving waste paper, the London United Tramways Company have fixed canvas bags near the exits of some of their cars, and passengers are requested to put their used tickets in these on leaving the car.

**Option of Bristol Tramways Company.**—The Board of Trade has directed that the period during which the Corporation of Bristol are entitled to give notice of their intention to exercise their option of purchasing the Bristol Tramways undertaking shall be extended for one year from October 31, 1918.

**Queues in Contemplation.**—The Liverpool Corporation Tramways Committee have appointed several of their members, with the general manager, to visit towns where passenger queues have been introduced and to report with a view to obviating the present crushing at some of the principal points in the Liverpool tramway system.

**A New Change-Speed Gear.**—A new type of change-speed gear has recently been patented by Leyland Motors, Ltd., and Mr. J. G. P. Thomas. It is a novel departure from the usual practice, and is similar in principle to a differential gear. Five forward speeds and a reverse are provided, and the whole arrangement is of a most simple character.

**The L.C.C. Fire Brigade Motors.**—The report of the London County Council Fire Brigade which has just been issued shows that, out of a total of 186 vehicles no fewer than 173 are motor driven. These comprise 87 fire engines, 80 escapes, and 6 long ladder vehicles. The horse-drawn equipment consists of 10 escapes and 3 long ladder vehicles.

**High Price for Second-hand "Halley" Vehicles.**—At a public sale at Barheard recently, exceptionally high prices were obtained for two motor lorries, both built by Halley's Industrial Motors, Ltd., of Yoker, Glasgow. A 2-ton 25 h.-p. lorry built in 1911, and a 3-ton 35 h.-p. lorry built in 1915, together sold for £1,900 after keen competition.

**Supply of Gas for Motor Vehicles.**—Under the new gas rationing scheme, the supply of gas for a gas-driven motor vehicle can only be obtained from a properly authorised supply station or garage. All these establishments are to be controlled and distinctions will be made between essential services and others. The local fuel overseer will be the authority in each case.

**War Wages Award Results.**—The decision of the Committee on Production last week awarding an additional 5 shillings a week to the women employees in the tramway industry will be generally acted upon by corporations and companies in the United Kingdom. At Manchester with the added 5s. a week bonus the women will receive £2 6s. weekly on appointment and £2 15s. after four years' service. At Southampton the additional 5s. will bring the average weekly wage up to £2 4s. 6d.

**Electrici y Works Extension.**—Colchester Corporation have received sanction for a loan of £5,188 for additional plant for their electricity works. Maidstone Town Council have applied for permission to borrow £22,000 for the extension of their electricity undertaking. Middleton Corporation is applying for sanction to borrow £7,500 for cable, plant, etc. Nottingham Corporation have not succeeded in obtaining Government sanction for the purchase of new generating plant for the Trent Side station.

**Birmingham M.T.V. Service.**—The excellent motor transport service which had been organised in Birmingham for soldiers on leave from France, has been suspended for several weeks owing to the refusal of the Petrol Control authorities to grant the necessary allowance of motor spirit. An offer of 50 gallons per month was made, but as this was useless for the purpose it was decided to suspend the entire service until adequate supplies are obtainable. After repeated applications, we now understand that a regular supply of 300 gallons has been arranged, and that the full service will be resumed forthwith.

**"Safety First."**—With a view to obviating a probable increase of accidents as a result of the further restricted street lighting, the London "Safety First" Council offers the following advice to pedestrians in the streets after dark.—1. Look to the right before crossing the road; 2 Cross the road from a street lamp; 3 Make full use of street refuges; 4 Always face approaching traffic. The Council ponts out that, if all pedestrians kept to the left, instead of to the right, of the footpath on which they are walking, people would not step off the kerb into the road with their backs to oncoming vehicles, one of the chief causes of accident.

**Fund for Loyal Employees.**—A fund inaugurated by a local resident for the purpose of making a recognition of the loyalty of those Croydon Corporation tramways employees, about fifty, who remained at work during the recent strike has received substantial support and a total of about £70 has been subscribed. It is proposed to close the fund on September 14, and the subscribers will be consulted as to the disposal of the money contributed. The treasurer is Mr. T. G. Dyson, 19, George Street, Croydon.

**Women to Organise.**—At a Conference of delegates representing trades in which women are employed, held in connection with the Trades Union Congress at Derby, Mr. Clynes said that in many industries women having silently submitted to a wrong for a long time had struck and had begun to organise. They should organise first and then they would not have to strike at all. A presentation of a badge was made to Mrs. Fountain, a conductor on the London County Council Tramways, for having done the most work in organisation. Several men speakers declared that while men at first did not like women going into this work, they were now going to stand by them.

**Strike Averted at Nottingham.**—A threatened strike of about two hundred members of the Amalgamated Association of Tramway and Vehicle Workers employed by the Nottingham Corporation was averted by the decision of the employees to remain at work, pending arbitration. The question at issue was the refusal of the Corporation to recognise the claim of certain men to be included in the recent award of 5s. per week, or to submit the point to the Committee on Production. When the men concerned handed in notices, however, the Special Committee of the Corporation, while still maintaining their original contention, agreed to treat the application as for increased war wages, and to send it to arbitration.

**Wages Problem at Croydon.**—There are still, according to the *Croydon Advertiser*, questions between the Croydon Corporation and the men and women in their employ in the tramways undertaking which may either be the subject of settlement with the unions or of a special award of the Committee on Production. The women omnibus conductors who come through Croydon have got their full 5s. extra war bonus as from July. These had already had the 20s. award from March. The Croydon tramway employees have not had the 20s. even, but only 16s., the figures in their case being a little less on account of previous advances. The immediate 5s. increased bonus, the subject of the Committee on Production's latest award is due in Croydon to both men and women now, but the question outstanding, both as to that and the 20s., is when the payments date back to, whether to March and July respectively, when the previous awards were made, or to the date of the certifying of the Croydon Corporation tramways as a munitions undertaking, a week or two ago. It is not likely that the Corporation will voluntarily agree to pay long arrears of these increased war bonuses, and if they do not agree with the unions, who are making this a contention, resort must again behad to the Committee on Production.

**A Decimal Coinage Commission.**—The appointment has been announced in the London *Gazette* of a Commission to "consider and report whether it is advisable to make any changes in the denominations of the currency and money account of the United Kingdom with a view to placing them on a decimal basis, and whether, if an alteration of the present system is recommended, it is desirable to adopt, with or without modification, the proposals embodied in the Bill recently introduced in the House of Lords by Lord Southwark, or some other scheme, and in the latter alternative to make specific recommendations for consideration by Parliament." The Commission is to consist of:—Lord Emmott, Lord Southwark, Lord Faber, Lord Ashton of Hyde, Lord Leverhulme, Sir Richard Vassar-Smith, Sir Joseph Larmor, Sir George C. Marks, Sir Alfred Watson, Mr. J. W. Causton, Mr. S. A. Smith, Mr. C. Godfrey, Mr. James Bell, Mr. Joseph Burn, Mr. Harold Cox, Mr. G. Hayhurst, Mr. Theo. McKenna, Mr. G. Marks, Mr. J. F. Mason, Mr. Albert Smith, Mr. G. M. Smith, Mr. G. C. Vye. The Commission is empowered to call witnesses and to examine books, documents, registers and records. Pending the appointment of a secretary, which will be announced later, communications may be addressed to "The Royal Commission on Decimal Coinage," Treasury Chambers, London, S.W.1.

**Strike at Southend-on-Sea.**—The Southend-on-Sea Corporation tramway service was dislocated for several hours on Thursday of last week by a sudden and unexpected strike. The origin appears to have been the dissatisfaction felt by the employees at what they regarded as unreasonable delay on the part of the Corporation in dealing with applications made on their behalf for increased wages. The consideration of these applications, which were received by the Tramways Committee on July 19, had been deferred till September 6, owing to the fact that there was, in the ordinary course, no meeting of the Committee held during August. The cessation of work on the Thursday morning was decided on only the previous evening, and a few early cars went out before a general stoppage about seven o'clock. Mr. J. H. Hill, J.P., secretary of the local branch of the National Union of General Workers. and delegates for the tramway employees discussed the position with the chairman of the Tramways Committee (Councillor G. Radford) and the general manager (Mr. R. Birkett). An agreement was provisionally reached to the effect that all engaged in the department should receive the 5s. award granted by the Committee on Production, dating from the time the award was made; also overtime pay at the rate of time and a quarter for week-days and time and a half for Sundays. The employees at once returned to their duties, and by ten o'clock the trams were running as usual. A meeting of the Tramways Committee took place in the evening, when the agreement was confirmed.

**Belfast Tramway Fares.**—A deputation from the Belfast Unionist Municipal Association waited on the Tramway Committee on September 3, with reference to tramway fares and stages. Dr. William Gibson for the deputation said that they had been appointed owing to complaints from various wards as to fares. He made a suggestion that all overlapping stages should be abolished, and that certain routes should be divided into half-mile stages, so that a passenger could travel the stage in which he entered the car and a succeeding stage for 1d., subsequent stages to be ½d. each additional, and no fare to be lower than 1d. Councillor Turner, chairman of the Tramways Committee, said that they would consider the suggestion.

**Tramway Companies and Metals in Germany**—The confiscation of metals from electric tramways in Germany is a subject on which the *Elektrotechnische Zeitschift* gives some interesting details in a recent issue. The regulations for the delivering up of metals in Germany by public bodies have been strengthened by new regulations. Tramways and secondary railways have already given to the Government large quantities of metal which has been removed from their cars and overhead lines. The encroachments on the line material have necessitated replacements of at least equal quantities of substitute metals, which were very difficult to obtain. The tramway companies have made great efforts to find substitutes, and this is exemplified by their attempts to replace contact shoes by zinc, carbon and electro-metal and contact rollers by cast-iron and other metals, but without great success. The necessity for saving tin has made investigations necessary for finding substitutes for bearings that are particularly exposed to shocks in railway work. This problem has caused serious difficulty, as the use of inferior bearing metals causes overheating of the bearings and scoring of the shafts. Copper overhead wires have been replaced in large quantities by iron wires, in spite of the increased voltage drop and reduction of working efficiency. The tramway companies are now making attempts to find means of putting still greater quantities of metal at the disposal of the Government, and it is probable that they will now remove the internal fittings of the cars, although they contain only a moderate quantity of the metals required.

## PERSONAL.

**Mr. J. A. Bell,** electrical engineer of Aberdeen Corporation, has been granted an increase in salary of £110 to £850.

**Mr. W. J. Hadfield,** permanent way engineer to the Sheffield Corporation Tramways, has been appointed local fuel overseer.

**Driver W. H. Spencer, R.F.A.,** formerly a conductor on the Bradford Corporation Tramways, has been awarded the Military Medal.

**Alderman Valentine Fowler,** a director of the Scarborough Tramways Company, died recently at the age of 69. He had been Mayor of Scarborough.

**Sgt.-Major J. H. Jones,** formerly a driver on the West Ham Corporation tramways, has been awarded the D.C.M., having previously received the M.C.

**Mr. A. J. Griffin** has resigned his position as engineer in charge of the West Ham Corporation power station, to take up an appointment with the Western Electric Company.

**Mr. John Rodgers,** late chief inspector of the Belfast Corporation Tramways, died last week. He retired from service about six years ago, after over thirty years' association with the local tramways.

**Mr. Struan Robertson** has been appointed engineer and manager of the Hawthorn Tramway Trust. Since 1914 he has been engineer and manager of the Melbourne, Brunswick and Coburg Tramway Trust, whose undertaking he designed and constructed.

**Private T. Temple, M.M.,** Grenadier Guards, is the fourth Cardiff tramway man who has won distinction in the war. He has been presented with a watch, chain and pendent by the employees at a gathering at which Mr. Arthur Ellis, general manager, presided.

**Mr. A. R. Green,** only son of Mr. W. J. Green, manager of the Weston-Super-Mare branch of the Bristol Tramways Company, has been gazetted a lieutenant in the Royal Air Force. Before the war he was in the electrical department of the Bristol Tramway and he has served in Egypt for over two years in the Army Service Corps (Motor Transport).

**Mr. Robert N. Tweedy,** on receiving a commission in the R.A.F., A.G.S. branch, has resigned his position as manager of the Dublin and South of Ireland branch of William Coates and Sons, Ltd., which he has held for nearly twelve years. He will have charge, under the C.O., of the power and lighting installations of all the aerodromes in Ireland.

**Lieut. L. G. Byng, M.C.**—We deeply regret to record the death from wounds of Lieutenant Leonard G. Byng, M.C., Grenadier Guards, which took place on August 24. Lieutenant Byng was the second son of the late Mr. J. Byng, and was a director of the General Electric Company

The death is reported of **Mr. S. A. Mahood,** who was for many years in the Brush Electrical Engineering Company, and later with the Birmingham and Midland Tramways Joint Committee as resident engineer at Smethwick Power House. He was 60 years of age, and leaves a widow and one son, who is a lieutenant in the Royal Engineers, and is now with the British army in Mesopotamia.

## FINANCIAL REPORTS AND MEETINGS.

**Brazilian Traction, Light and Power Co.**—A quarterly dividend of 1½ per cent. has been declared on the preference shares.

**Tyneside Tramways and Tramroads Co.**—A dividend of 2½ per cent. has been paid for the past half year, £3,600 has been carried to reserve and £1,696 carried forward.

**J. Stone and Co., Ltd.** have paid a dividend of 10 per cent. on the ordinary shares; £50,000 is placed to reserve, and £116,702 is carried forward.

**Madras Electric Tramways (1914) Ltd.**—An interim dividend in respect of the year ending December 31st next of 8 per cent. per annum, free of tax, on the ordinary shares has been announced.

**Aberdeen Suburban Tramways Co.**—For the half year to July 31 the net profits amounted to £2,300 and £1,614, was brought forward. A dividend at the rate of 5 per cent. per annum has been declared, £1,200 is added to the depreciation fund, and £1,061 is carried forward.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended Sept. 4, amounted to £68,503, an increase of £9,281 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to Sept. 4 (twenty-two and a half weeks), the total receipts were £1,454,366, an increase of £196,268 on the corresponding period of 1917.

**Birkenhead Corporation Tramways.**—The seventeenth annual report for the financial year ended March 31 states that the income was £97,837 16s. 5d., or £17,090 3s. 3d. higher than the previous record made during the preceding twelve months. The traffic receipts, £96,386, showed an increase of £16,714, and the parcel receipts £206, an increase of £7. The total working expenses amounted to £53,815, an increase of £11,708. The available balance of £17,372 had been allocated as follows: In aid of rates, £8,550; reserve fund, £3,822; renewals fund, £5,000. The credits to reserve fund now stood at £12,013 and to renewals fund £39,338. The war bonus at present being paid to employees of the department was at the rate of £12,800 per annum. War allowances to dependents of employees on active service amounted to £998 8s. 9d., making a total since the war commenced of £4,996 7s. 4d. The passengers carried for the past year were 20,538,476, being an increase of 2,588,043 over the previous year, and an increase of 5,370,518 over the pre-war year. These figures did not include the large number of wounded sailors and soldiers who were allowed full use of the cars without charge. The effect of the withdrawal of the 1½d. stages in June, 1917, showed that, whilst there was a loss of 1,720,645 passengers at 1½d., there was an increase of 2,114,138 passengers at 2d.

## CONTRACTS AND ORDERS.

**Hythe Town Council** propose to purchase two petrol wagons for the collection of house refuse.

**Motor Wagons for Hythe.**—The Corporation of Hythe has decided to purchase two petrol wagons for use in the sanitary department.

**Sheffield Corporation** has agreed to purchase two electric chassis of British make instead of two other vehicles that they had on order.

**Salford Electricity Committee** have accepted a tender for sixteen elbow pipes for boilers at £195 from Stewarts and Lloyds, Ltd., of Glasgow.

**Salford Electricity Committee** have accepted the tender of Mann's Patent Steam Cart and Wagon Company, Ltd., for a 5-ton steam tipping wagon at £1,045.

**South Shields Electricity Committee** have accepted a tender for cable at £1,661, plus £125 for contingencies, from British Insulated and Helsby Cables, Ltd, of Prescot, Lancs.

**Electric Tipping Wagon for Maidstone.**—The Local Government Board has sanctioned the purchase of a 3½-ton electric tipping wagon by the Maidstone Corporation at a cost of £1,200.

**Electric Vehicles for Glasgow.**—The Cleansing Committee of the Glasgow Corporation, has recommended the purchase of four additional electric vehicles for the collection of house refuse.

**Electric Tower Wagon for Sheffield.**—The Tramways Department of the Sheffield Corporation is about to purchase an electric vehicle chassis upon which it is intended to mount a tower wagon body.

**Manchester Electricity Committee** are inviting tenders, which must be received by 10 a.m. on September 13, for a 3½-ton electric tipping wagon. Specification and form of tender may be obtained from Mr. F. E. Hughes, Town Hall, Manchester.

**Motor Omnibuses for Todmorden.**—Application has been made by Todmorden Corporation to the Ministry of Munitions for a priority certificate to enable the engineer to purchase three new motor omnibuses. In view of the fact that a number of vehicles have been commandeered only a restricted service has been possible. This has been quite inadequate for the needs of the town, and as a result of strong local feeling a deputation will wait upon the officials of the Ministry to urge the importance of the matter, should this prove necessary.

MANCHESTER MUNICIPAL
COLLEGE OF TECHNOLOGY.
(UNIVERSITY OF MANCHESTER).
Principal: J. C. M. GARNETT, M.A. (late Fellow Trin. Coll. Cam.).
Vice-Principal: E. M. WRONG, M.A. (Fellow Magdalen Coll., Oxford).
The Session 1918-1919 will open on 3rd OCTOBER. Matriculation and Entrance Examinations will be held in July and September. Matriculated students may enrol for 1918-19 from 1st August, 1918, and if under 18 years of age are eligible for membership of the Officers' Training Corps.
DEGREE COURSES IN TECHNOLOGY.
The Prospectus gives particulars of the Courses leading to the Manchester University Degrees (B.Sc. Tech. and M.Sc. Tech.) in the Faculty of Technology, in the following Departments:—
MECHANICAL ENGINEERING (Prof. G. G. Stoney, F.R.S.).
ELECTRICAL ENGINEERING (Prof. Miles Walker, M.A.).
SANITARY ENGINEERING (including Municipal Engineering).
THE CHEMICAL INDUSTRIES (including General Chemical Technology, Bleaching, Dyeing and Dyestuff Manufacture, Printing, Papermaking, Fermentation Industries, Metallurgy, Fuels).
TEXTILE INDUSTRIES, MINING, ARCHITECTURE, PRINTING AND PHOTOGRAPHIC TECHNOLOGY.
ADVANCED STUDY AND RESEARCH.
The College possesses extensive laboratories and workshops, equipped with full-sized modern apparatus, including machines specially constructed for demonstration and original research.
PROSPECTUS OF UNIVERSITY COURSES OR OF PART-TIME COURSES SENT FREE ON APPLICATION.

METRIC WEIGHTS & MEASURES AND BRITISH EQUIVALENTS
COMPILED BY
A. J. LAWSON, M.Inst.C.E.,
ON BEHALF OF
THE BRITISH-ITALIAN COMMERCIAL ASSOCIATION (Incorporated),
5, VICTORIA STREET, LONDON, S.W.1.
Conversion Tables of practically every British unit of measurement into Metric Equivalents are given with great detail and accuracy. These, in conjunction with the tables of £ s. d. and *lire*, will enable merchants and manufacturers to quote in the measurements and currency of the country with which they wish to trade.
Cloth, blocked in gold. Size 8½ by 6½. 212 pages. 5s. nett.
EYRE AND SPOTTISWOODE, LTD., EAST HARDING STREET, LONDON.

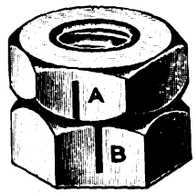
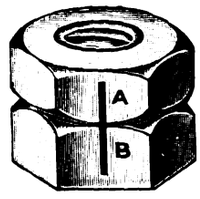
# The First Law of Mechanics:



LOCKED

—in design
SIMPLICITY
—in operation
SAFETY



NOT LOCKED

## Both of these are characteristics of

# VISLOK

**which consists of two inseparably inter-connected, continuously threaded sections capable of independent rotation, having no loose parts and operated with an ordinary spanner: thus, Simplicity. Its merits as a**

# SAFETY LOCK NUT

**are undeniably proved by the experience of hundreds of firms on all classes of machinery and industrial plant over a continuous period of nearly four years.**

One of the most noted Steel Makers of Sheffield use a number of steel-tyred Loco Type Steam Wagons. The swivel plate, which is subjected to severe twisting strains and vibration, is secured to a saddle by four bolts and nuts. To quote our correspondent (the Chief Engineer):—

"Formerly ordinary nuts would not hold and the addition of extra "nuts locked to them effected no improvement. Since fitting one Vislok "amongst the four it has held secure for some months and the remaining "three ordinary single nuts have also remained fixed much to my "astonishment. What is still more pleasing is that the bolt on which "Vislok was fitted has not elongated in the shank or thread which is "usually the trouble with patent locking devices."

**From which it is clear that Vislok effects Economy, as we have always claimed. To prove it under any conditions, we give**

***FREE TESTING SAMPLES.***

A SELECTED LIST

of Tramways where the need of VISLOK has been proved

# THE PARAGON EARTH CONE

is the safest, surest and most reliable. Careful tests have proved that its geometrical form provides a good contact. Will carry heavy currents for short periods without overheating. THE PARAGON EARTH CONE is made of pure copper—perforated—and filled with charcoal. This attracts the moisture and ensures a certain contact. Suitable for Electric Railways, Tramways, Telegraph, Telephone, Electric Light, Power, Lightning Conductors, etc.

## TELEPHONE IN COMFORT

**THE LAZILITE CO.** (KENT, MITCHELL LTD., Proprietors)

5 BALDWIN'S GARDENS, GRAYS INN ROAD, E.C.

**THE LAZILITE** telephone arm is a boon to busy business men. It opens, closes, rotates and lifts. Just to your elbow when needed or out of the way, still within reach when not required. Standing or seated you can speak on the 'phone with comfort. No more spilled ink or spoiled papers. Can be fixed by anyone anywhere. You will be happy to-morrow if you get one to-day.

**PRICE £2 10 0**

THE

# RAIL WELDING COMPANY

119 Victoria Street, Westminster, LONDON S.W.1

## ELECTRIC RAIL WELDING FOR NEW AND EXISTING RAILS

The only process by which the premature renewal of rails owing to defective joints can be avoided, the life of the rails prolonged for several years, and silent running ensured.

(Until recently carried out by The Rail Welding Dept. of the Tudor Accumulator Co. Ltd.)

*THIS PROCESS HAS BEEN CARRIED OUT ON THE FOLLOWING UNDERTAKINGS*

| | | | |
|---|---|---|---|
| ABERDEEN | LEITH | NEWPORT | SALFORD |
| BRADFORD | LIVERPOOL | OLDHAM | SHEFFIELD |
| DUNDEE | MANCHESTER | PAISLEY | STOCKPORT |
| GLASGOW | MIDDLETON | ROCHDALE | SUNDERLAND |
| HALIFAX | NEWCASTLE | ROTHERHAM | WEST HAM |

# From First to Last

it pays to choose an Albion. Albions give better service, are more reliable, cost less in upkeep, and last longer. Even after ten or twelve years' constant wear an Albion Motor Vehicle is often good for considerable further service. It is the unique experience of the Albion Company which accounts for this remarkable fact—a fact widely recognised by Governments, Contractors and Business Houses throughout the world, who, after experimenting years ago with other machines, now order whole fleets of Albions.

Fully Illustrated Handbook published for each Albion Model, price 3/- per copy.

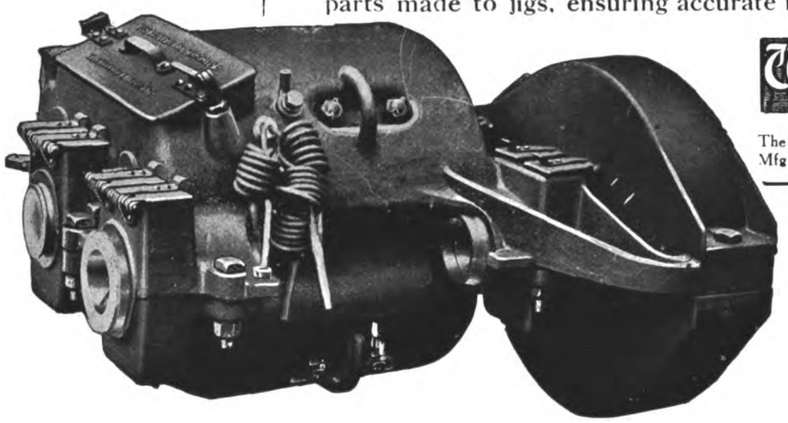
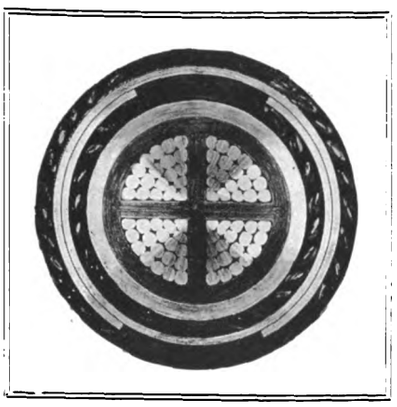
## Over 4500 Westinghouse
# Tramway Motors

have been supplied to the London County Council and the Glasgow Corporation. These motors are famous for their efficiency and low maintenance costs. All renewable parts made to jigs, ensuring accurate fitting of spare parts.



Westinghouse Manchester

The British Westinghouse Electric and Mfg. Co. Ltd., Trafford Park, Manchester



*·075 sq. in. Cable, Class 202, Paper Insulated, Lead Covered, Served, Steel Tape Armoured and Served.*

# HENLEY CABLES

EVERY year we manufacture tens of thousands of miles of small electric wire insulated with Vulcanised India Rubber, in addition to Paper insulated Mains.

WE have separate factories (at North Woolwich and Gravesend, England), each devoting its energies to one type.

YOU should ask us to quote for your requirements in *any* size or type of Electric Cables for use under any working condition.

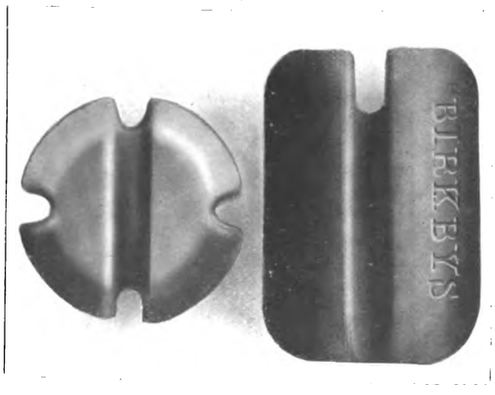
# Perfection

THIS is the standard aimed at in the Design and Manufacture of BIRKBY'S Porcelain Insulators, and having put that standard high enough we have produced an insulator of very high quality.

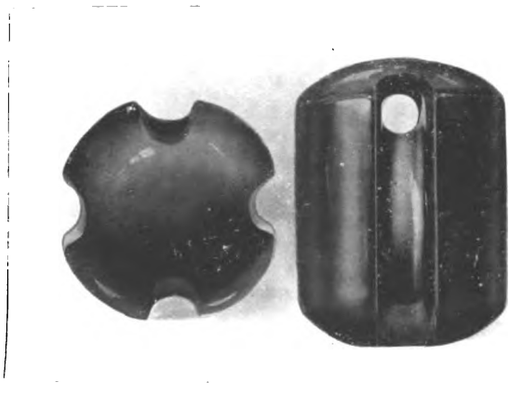
Its beautiful finish and extreme accuracy of shape immediately inspire confidence, and the user quickly proves to his satisfaction that these Insulators are sound in every way.

## DESIGN—MECHANICAL AND ELECTRICAL STRENGTH ALL O.K.

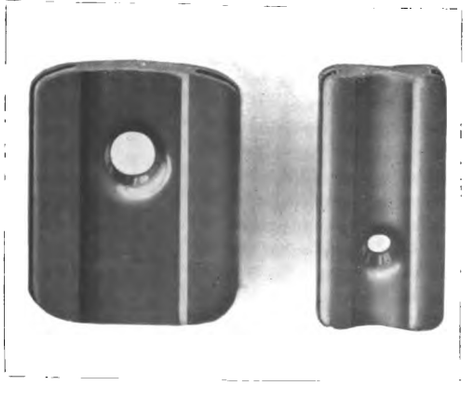
TYPE "A" (made in 3 sizes)



TYPE "B" (made in 3 sizes)



POLE STRAP TYPE



### FARADAY HOUSE TESTS

| MECHANICAL & ELECTRICAL BREAKING STRESS | | | FLASH-OVER TEST (WET) | | |
|---|---|---|---|---|---|
| Size. | Lbs. | Volts, A.C. | Size. | Volts, A.C. | Remarks. |
| Large - - | 17,203 | 27,100 | Large - - | 15,000 | Flashed over |
| Medium - | 11,200 | 22,600 | Medium - | 11,500 | ,, ,, |
| Small - - | 6,060 | 15,200 Flashed over | Small - - | 10,000 | ,, ,, |

The rainfall in the wet tests was equivalent to approximately two inches per hour, and consisted of distilled water. Room temperature, 59° F.

# Brill Swing-Link 21-E Truck (Pat.)

THE Brill swing-link truck brings to the short car the advantages of the swinging bolster of the bogie-truck. Body oscillations on single-truck cars are now counteracted. The heavy shocks and blows at the wheel flange and rail head, due to side thrusts —endwise swinging—and "snaking" of the body, subject passengers to extreme buffetting and discomfort. The swing-link intercepts the rigid thrust of the body, modifying these side shocks, and thus introduces greater flexibility between truckframe and carbody.

The swing-link truck permits a car to be operated around curves at greater speeds without the present shocks or lurching of the body; the body structure here benefits and the cushioning movement is vastly more comfortable for passengers. Whilst the wheels and axles are always parallel, the swinging movement of the links allows a slight lateral movement of the axle across the truck, giving greater ease on curves. This easement reduces noise and wear, both on curves and straight track. It further renders a longer wheelbase feasible, bringing so much greater stability to the car. *A carbody mounted on this swing-link truck is a revelation in riding comfort.* The swing-link journal box is immediately adaptable to existing 21-E trucks. No labour nor expensive fitting involved. . . . . .

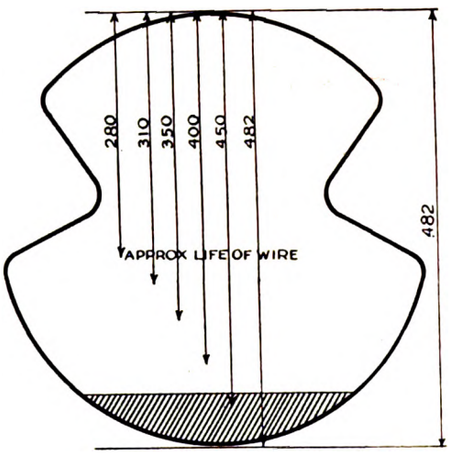
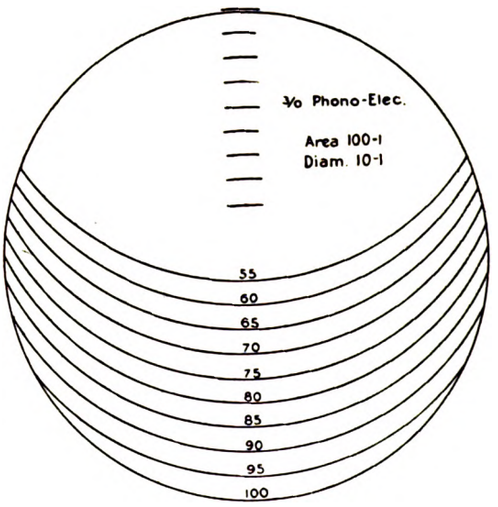
# THE SECRET

## OF THE LONG LIFE IN

# PHONO-ELECTRIC TROLLEY WIRE





The above diagrams show the permissible wear upon a No. 0000 Phono ELECTRIC trolley wire and are taken from the actual results of gauging by a large user.

They show that the section of the wire can be worn down to practically 65 per cent. of its original thickness before it need be discarded.

This is because it has such a high tensile strength that the small section left is quite sufficient to withstand the strain of traffic. Ordinary hard drawn copper wire would have to be renewed long before an equal reduction has been made and would have worn out much quicker.

## HOW IS THIS FOR ECONOMY?

PHONO-ELECTRIC Trolley Wire is homogeneous throughout and not hard on the surface only, like hard drawn copper wire. Therefore the wear is even throughout.

**Try a short length on a busy section. We ask this to prove what we say is correct**

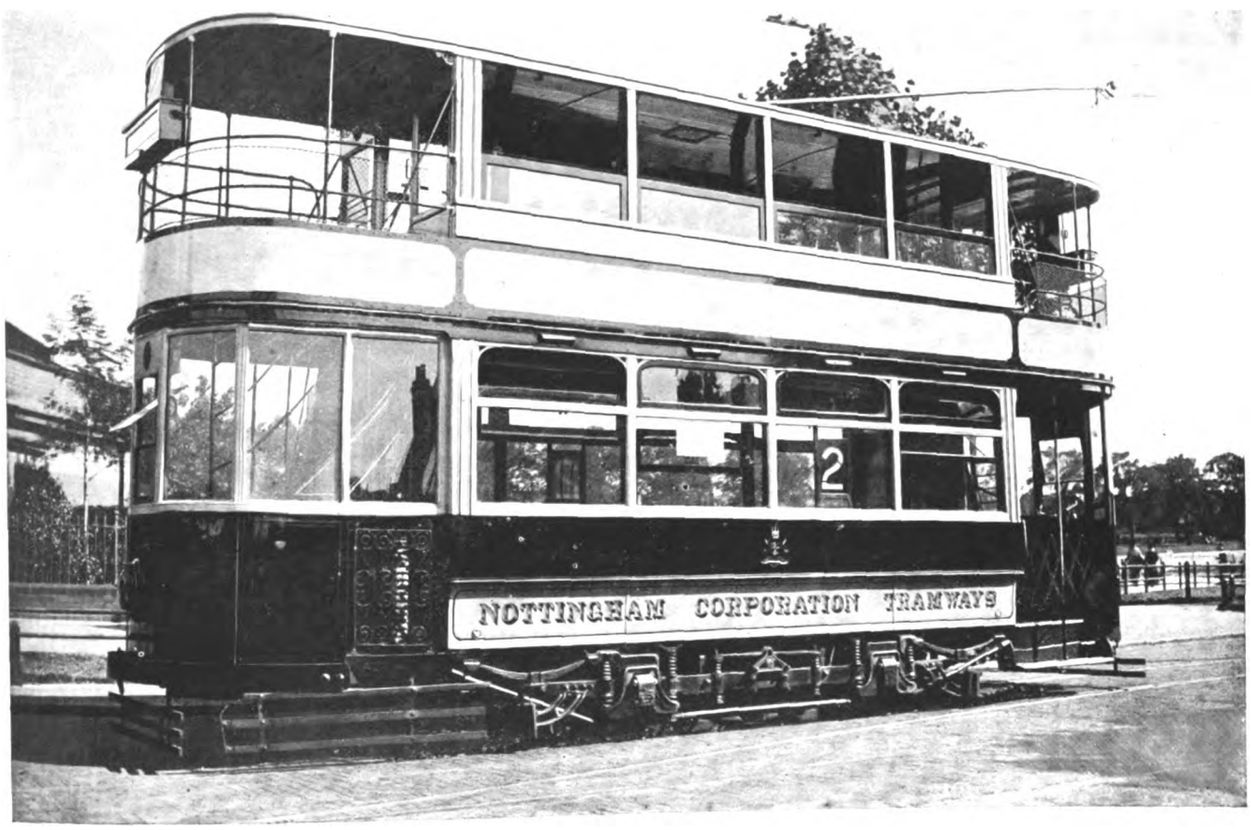
THE Tramway & Railway World
WITH MOTOR TRAFFIC SECTION

Founded 1892. LONDON, SEPTEMBER 12, 1918. VOL. XLIV.

# NOTTINGHAM CORPORATION STANDARD CAR.

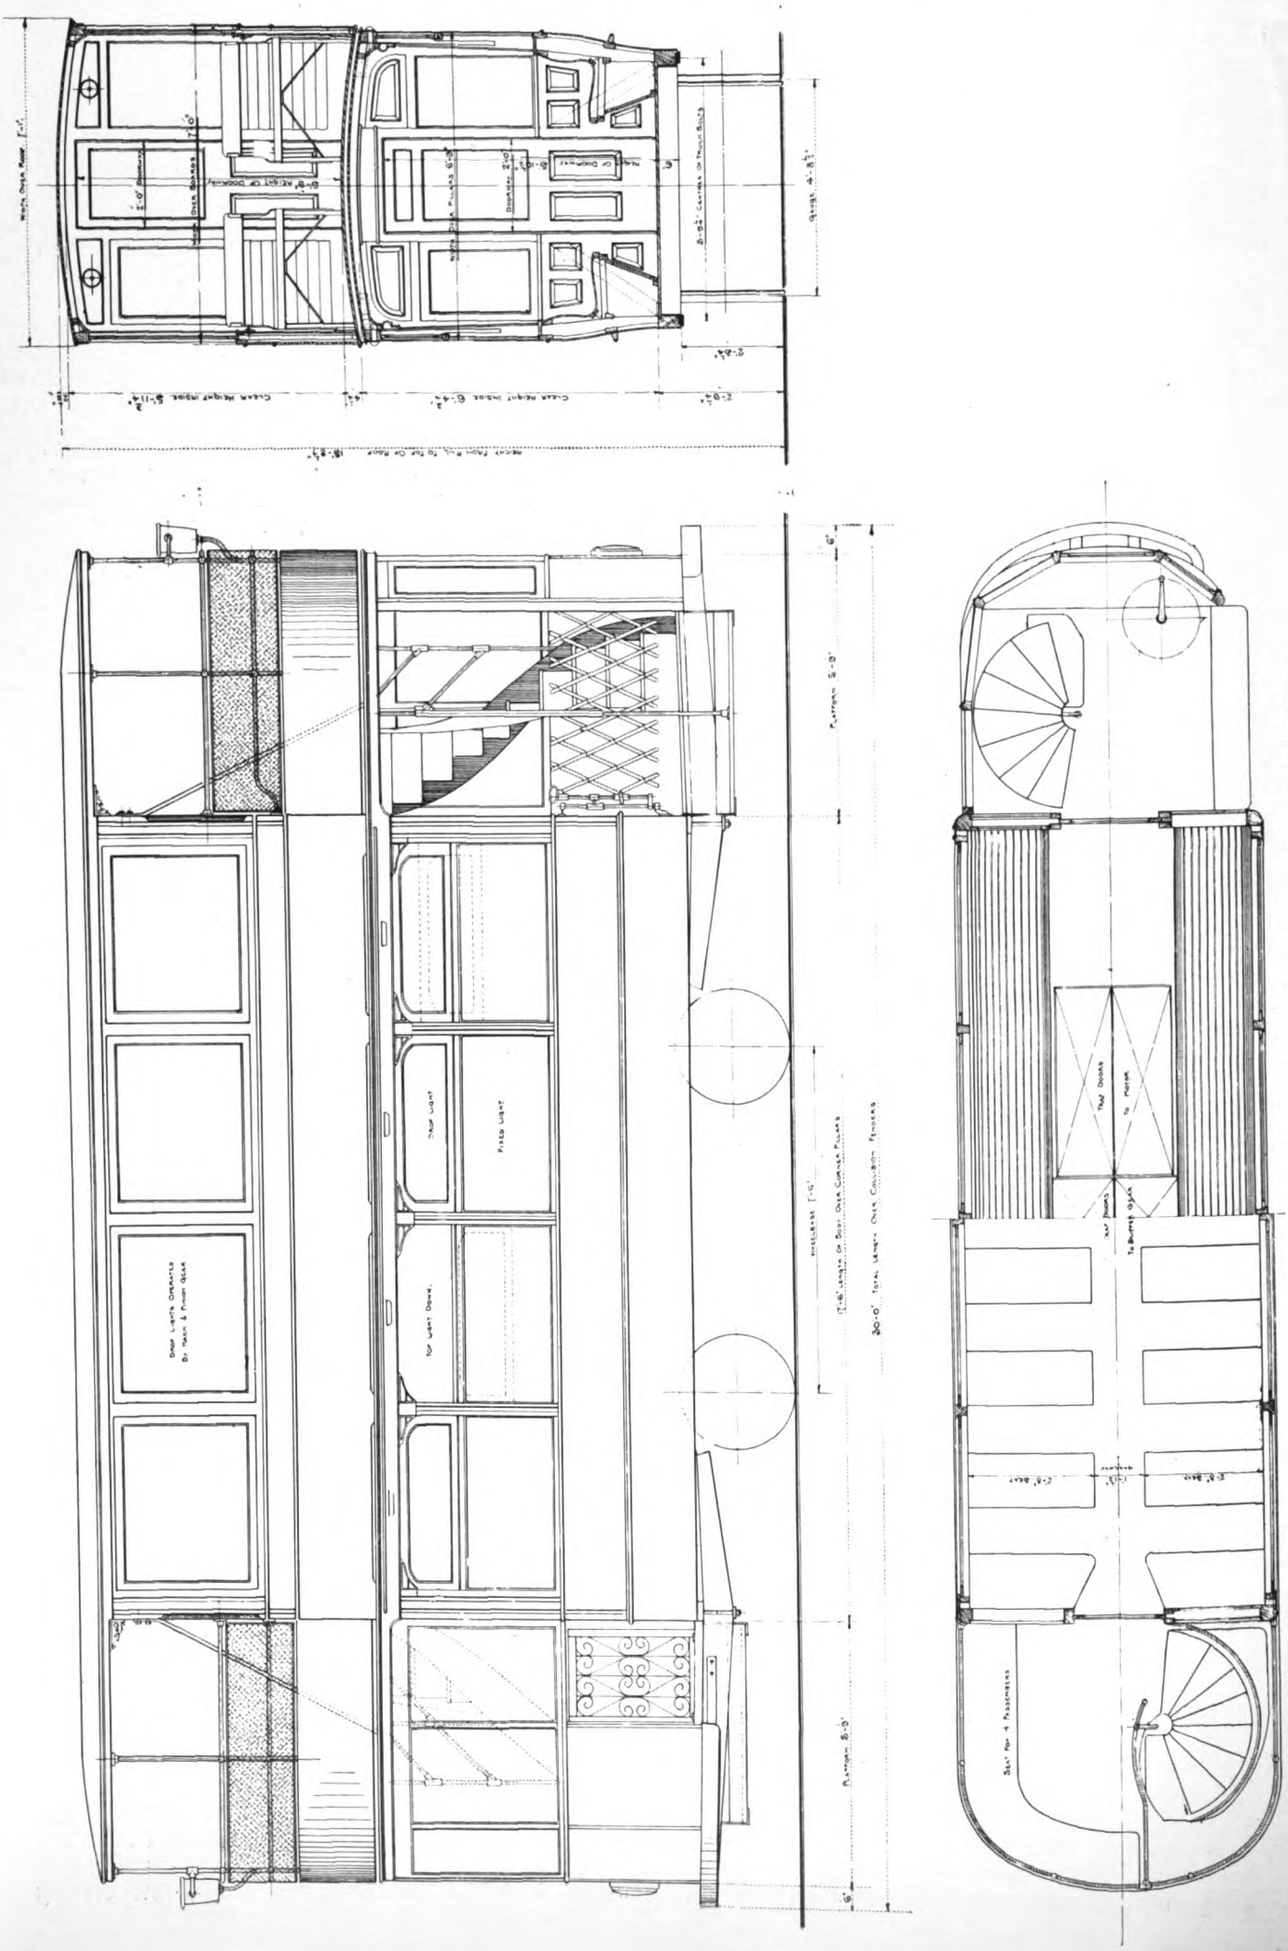
The accompanying illustrations show the type of car that the Nottingham Tramways Committee adopted in 1914, on the advice of the general manager, Mr. J. Aldworth, as their standard car. Twenty of these cars have been put in service since the outbreak of war, and as soon as circumstances permit the number will no doubt be increased, for in Nottingham, as well as in many other towns, the present rolling stock has become inadequate to meet the demands of increased traffic. The new cars are in every respect thoroughly good examples of the best work of British builders, and the Tramways Committee are well satisfied both with the construction and the design, while the public find the cars convenient and comfortable. The interior is light and well ventilated, and owing to the arrangement of the windows and the pattern of the ceiling gives an effect of spaciousness that is agreeable to passengers.

A comparison of the standard car with the car originally adopted in 1901, when the Nottingham Corporation electrified their tramways, gives a good idea of the changes effected in the design of four-wheel cars in this country during the past twenty years. At the end of the last century the development of car design for electric tramways for city and suburban services was practically stationary, and the car then selected for Nottingham was typical of those that continued to be built for many years afterwards, and are still in use in many towns. When describing the Nottingham car of 1901 in our issue of February 7 of that year, we said:—"This country has gone to America for nearly all its precedents in tramway equipment, but it refuses to be led by American practice in its adoption of single-deck cars. The advantages of the double-deck car in this country are easily understood. It deals with the separation of smokers and non-smokers; it doubles the seating



Nottingham Corporation Tramways Standard Car.

Digitized by Google



Elevation and Plan—Nottingham Corporation Standard Car.

Digitized by Google

capacity with comparatively small increase in weight; it is more popular than the single-deck car with the public; and the public in this country must have what it prefers." For these reasons the Nottingham cars were provided with seats on the upper deck, which, of course, were then uncovered. Single trucks were used because it was felt that short cars were best adapted to local conditions.

That the type of car then selected well met the requirements is proved by the fact that the new standard cars are also double-deck, single truck cars. In details, however, they differ greatly from the earlier cars. The top deck is now covered, and the platforms are enclosed with vestibules. The general appearance of the car has gained much. It is more substantial and solid, without being more heavy looking. An element in producing this effect is no doubt the scheme of the window framing.

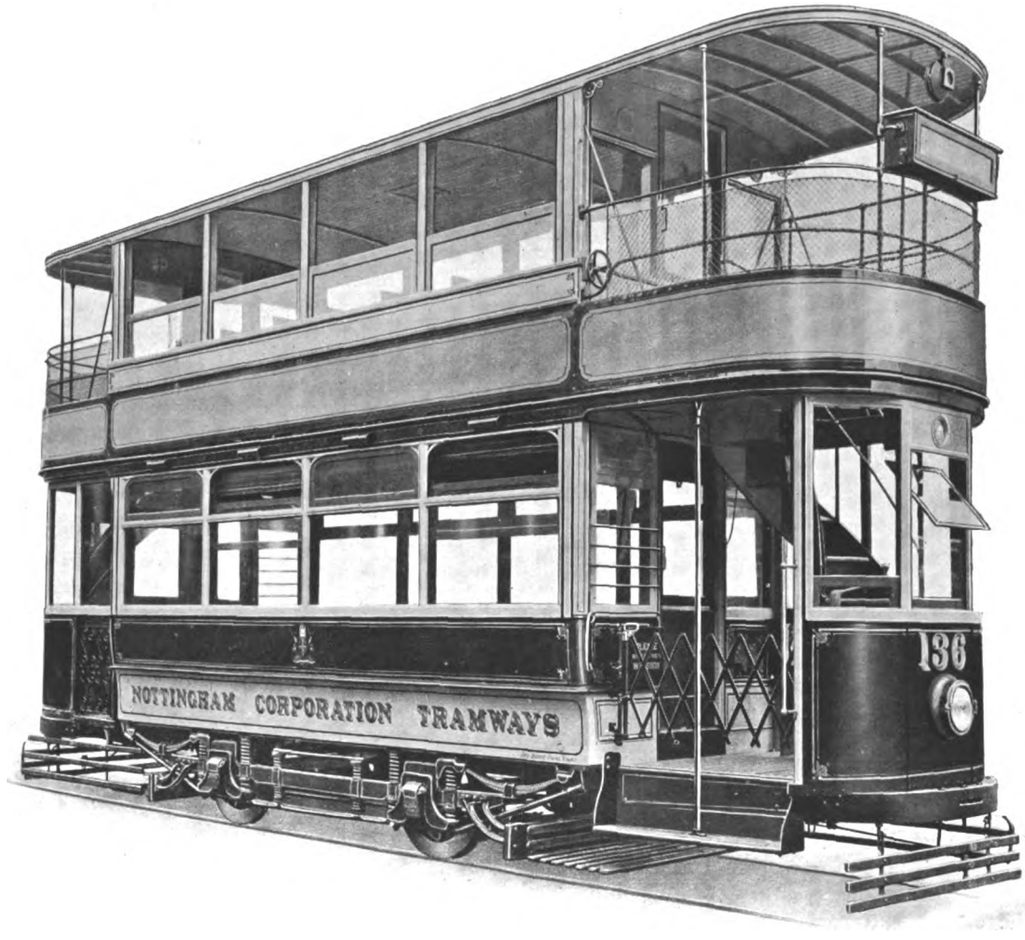
The car shown in the accompanying drawing was supplied by Dick, Kerr and Company, and was constructed at their car works at Preston. The body is mounted on a four-wheel Preston truck, and is fitted with 32½ in. wheels. The principal dimensions of the body are as follows:—

| | | |
|---|---|---|
| Total length over collision fenders | 30 ft. | 0 in. |
| Length of body over corner plates | 17 ft. | 6 in. |
| Height from rail to top of roof | 15 ft. | 8½ in. |
| Clear height inside lower saloon | 6 ft. | 4¾ in. |
| Clear height inside upper saloon | 5 ft. | 11¾ in. |
| Width over roof | 7 ft. | 1 in. |
| Length of platform over buffer | 6 ft. | 3 in. |
| Wheel base | 7 ft. | 6 in. |
| Gauge | 4 ft. | 6¾ in. |
| Width between centres of truck bolts | 5 ft. | 9¼ in. |

The cars are provided with Tidswell life-guards, Philipson side guards, and the Spencer-Dawson power brake. Motors and controllers were manufactured by Dick, Kerr and Company; the former are the standard D.K.9A-3 type, and the latter the D.B.L.K-3 type.

The whole of the framing is of teak, and the body is fitted with specially designed steel braces, which prevent the joints from working loose. The windows, as shown in the illustrations, are in two parts, the upper portion being movable so that it can be lowered as required for ventilation.

The car has a seating capacity for sixty-four passengers. In the upper saloon, arranged on either side of a centre aisle, are eight transverse seats, each accommodating two passengers. The lower saloon has longitudinal seats, each accommodating twelve passengers and divided into two sections by means of a brass rail, which assists the conductor in getting the full number of passengers seated.



**Nottingham Standard Car—View Showing Movable Windows in Vestibule.**

As will be seen from the illustrations, the driver and conductor are fully protected from the weather by well-lighted vestibules. The window in front is pivoted in the centre, so that it can be set at any angle convenient to the driver. While there are various opinions as to the use of vestibules, the objections originally made to them have been proved more imaginary than real, and there is no doubt that especially in inclement weather drivers find them an advantage.

The cars are fitted with illuminated route numbers placed over the end destination indicators. Numbers are also placed on each side of the cars in the side windows, and these are found to be very serviceable.

## TRACK MAINTENANCE AND ELECTRIC ARC WELDING.

Electric arc welding passed out of the experimental into the practical stage many years ago, but, in spite of this fact, the subject is still rather vague to many engineers. Electric welding plays a most important part to-day in the manufacture and repair of many articles, and is largely used for track repairs by many important tramway undertakings. Engineers have previously hesitated to adopt electric welding, because they failed to see its advantages, and doubted its efficiency. They did not fully appreciate that by installing a small plant they had at their command a ready means of carrying out repairs on their track which had previously been beyond their power. They further, no doubt, thought that the plant and apparatus employed were complicated and required extreme skill in handling, and they further thought that the amount of benefit gained would not be sufficient to justify the outlay.

The object of this article is to show that the process is simple, and can be carried out by ordinary labour, whilst the repairs are efficient and effected at small cost; that the saving is considerable, and that a plant once installed can be considered a paying investment.

If the track is allowed to fall into a bad condition, the faults are further transmitted to the rolling stock. The shocks and jars given to the truck frames by a badly-worn track cause many a car to be laid up in the repair depot for days. Nuts are shaken loose, hangers and brake fittings are thrown out of adjustment, and many other faults develop which would ordinarily be avoided.

Even if new rails were procurable, it is doubtful if the present labour conditions would permit of extensive track repairs, and these conditions will not terminate with the cessation of hostilities. They are bound to continue for a considerable time after the war, and this fact should be borne in mind in reviewing the general aspect.

Electric arc welding has been extensively used by the shipbuilding and general engineering trades for many years Various systems are in use, but the "E. & E." system has been perfected and the makers claim many advantages for it. There are two principal systems in common use, the low pressure alternating, or Thompson system, and the electric arc. The former is largely used in manufacturing processes, but nearly always requires large transformers and costly clamping devices. The electric arc is the system best adapted for track and rail repairs, and this is again divided into two methods. The first consists of using a metal rod as the electrode, and is without doubt the system which finds most application in track work. The other method consists of using a graphite electrode, from which the arc is struck to the rail. This, of course, does not provide any new metal, so this must be fed to the arc by means of a metal bar. The graphite electrode is usually employed for cutting and filling. The former has the advantage that the carbon contents of the steel rail are not interfered with, as they may be with the graphite electrode. This, however, can be avoided by the selection of pure graphite electrodes, and by carefully observing that the current is flowing in the right direction.

Various types of metallic electrodes are provided for use upon different classes of rails; for instance, electrodes of manganese steel can be used for the repair of crossings or points made of that metal. The application of the arc can easily be understood by the illustration here shown.

Fig. 1 shows a worn rail joint, inside section, where the original conditions can be seen by the dotted line AA. Traffic passing in the direction of the arrow has the effect of wearing the facing end of each rail, this being due to the fall or hammer of each wheel as it drops from the preceding rail at the gap. When the hammer once starts it rapidly increases, as obviously the fall becomes greater. Here the object of the welder will be to restore matters to their original state as far as possible. He, therefore, strikes an arc upon the

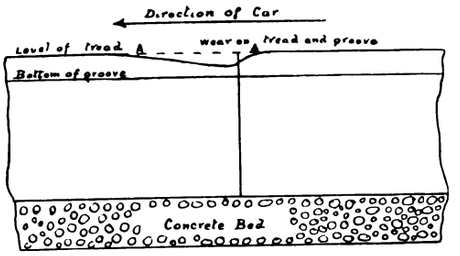

Fig. 1.

face of the rail with a metallic electrode, and deposits metal until the surface is somewhat higher than that required. If necessary, the metal can be applied in successive layers where the depression is very deep, but in such cases the operator must be careful to remove the slag from the first layer before the second is applied. The slag is formed in a thin black coating of hard silicate scale. It can be removed by chipping and this is best carried out by one of the special hammers provided for the purpose, the loosened scale being afterwards removed with a wire scratch brush.

When the whole of the metal has been deposited, the joint will appear as shown in Fig. 2. In this illustration the wavy method of depositing the metal will be seen. This mode of working the electrode is the practice regarded as most successful.

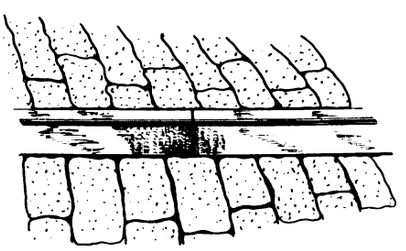

Fig. 2.

While the newly-deposited metal is still hot, it should be hammered carefully. This will assist in making the deposit more homogeneous and prevent sponginess. When the joint is cool it can be dressed to the correct level. The joint is finally surfaced by means of a rail plane or rail grinder of the "Celerity" type. Where necessary for special repair work, manganese electrodes can be used to great advantage.

This method of surface repair is, of course, not suitable in cases where the rail ends have already worked loose, and the foundation become damaged. To leave such a joint with a mere surface weld would only result in the newly-deposited metal fracturing under the first car. It is necessary in such cases to remove the side sets and attend to the packing of the damaged foundation. This done, the surface weld can be carried out in the manner described. As the sets have been removed, advantage can be taken to deposit new metal at the base of the rail, and the fish plate can also be secured by a layer of metal, deposited along its edges.

Digitized by Google

The repairing of damaged checks provides a large field for electric arc welding. Fig. 3 shows one method of carrying this out. The illustration shows the section of a rail, where the groove has worn badly in the check, so that it has either cut through at places or become so badly cracked as to court accident. The first process consists of cutting out entirely the faulty check. This can be accomplished by cutting it away with the electric carbon arc. This is a quick method but requires some care or the metal may descend into

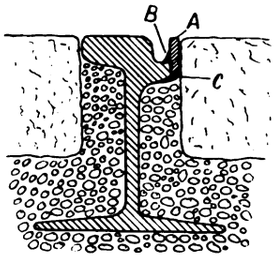

Fig. 3.

the base of the rail groove, where it is hard to remove. Graphite electrodes are used in this case, as there is no metal to be deposited.

The new check which consists of a length of steel bar, is then placed in position, as shown at A in Fig. 3. It must be packed in position, so that the top corresponds with the original check. Metal is then deposited at B and C. In the latter case it will be seen that the metal has to be built up above the arc. This is termed overhead welding, and is carried out by metallic electrodes having thicker flux coatings than those used for downright welding. The object is to prevent the molten metal falling from the tip of the electrode by the thicker sheath.

The repairs at junctions and crossings are easily carried out by the electric arc, for here it is the simple depositing of metal in worn grooves and tongues. Care is, however, necessary to make the deposit even and keep it off the adjoining surfaces, so that smooth

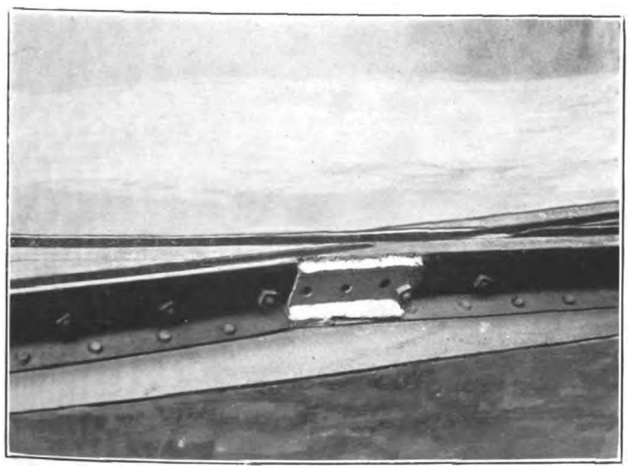

Fig. 4.—Rail Crossing Repaired by Arc Welding.

running may be secured. The spongy ends of points are easily corrected by this process, thus solving what has hitherto been a great trouble on many tramways.

The above show only a few of the many repairs which may be effected, but instances will readily suggest themselves to the engineer owning a welding plant.

The plant employed for arc welding is simple and requires no great skilled attention for its operation. Briefly it consists of a motor generator suitable for welding. The motor is wound to operate upon 500 to 550 volt circuits. The current is taken from the trolley wire by means of a pole and hook connection, where the welding set is mounted upon a lorry or wagon. If the set is mounted upon a repair car, the ordinary boom circuit can be used to collect the supply.

The generator is, as a rule, specially designed to withstand the heavy work of welding. The load may vary from zero to 50 per cent. overload in a few seconds. There are, however, other considerations to be met, and it is advisable always to adopt the special machines now put on the market by the makers for the purpose.

The voltage required by the arc is approximately 50 for the carbon arc, and 25 to 35 for the metallic electrode. The voltage, however, varies according to the thickness of flux covering and the kind of repair being effected. It is, however, necessary to include in the arc circuit a resistance which acts as a steadying device, limiting the current in the event of a dead short circuit or when the arc is struck. The resistance must be arranged for ample carrying capacity and free ventilation, on account of the long periods which it may be in circuit. The actual regulation of current is also obtained by means of a shunt regulating resistance in the generator field circuit.

The current required in welding arcs varies from about 35 to 200 amperes when metallic electrodes are in use, and up to 250 to 400 amperes with carbon electrodes. This is for portable sets, as used upon track repairs, and is usually ample for the purpose. For metallic electrodes there is a scale of current values for each size electrode. These must not be exceeded or the metal is blown from the end of the rod rather than quietly deposited. The size of the electrode used depends upon the thickness of the work and the extent of the weld.

The whole of the plant can be carried either upon a lorry or upon a repair car. In the former case, the set can be used for rail repairs in the daytime, without interfering much with traffic. The repair car which, of course, occupies the rails can only be used at night. The welding work is easily learnt by any skilled and intelligent workman in a few weeks. It requires a little skill to deposit metal neatly and free from flaws. This can be best obtained by experience and practice in the depot upon scrap material. Men who have been accustomed to oxy-acetylene welding, readily become expert in the use of the electric arc.

The time occupied in repairing and grinding off a single joint is approximately one hour and the amount of current used is 2·8 units. These figures were obtained from actual tests. With an operator and assistant, the actual cost of the repair worked out at 6s. 6d. In this case, welding was only done by night, and as many as six joints were dealt with each night. The sections finished are practically equal to new rails, and the smoothness in running is appreciable.

The plant also finds many an application in the depot where all sorts of repairs can be dealt with. Worn holes in side frames and brake gear can be filled up solid with metal, and redrilled to correct size. Broken lugs can be replaced upon motor and gear cases, and hundreds of other applications will be found. In fact, much material previously discarded as scrap can be reclaimed and made serviceable again. For much of the information contained in this article we are indebted to the Equipment and Engineering Company, of 2-3, Norfolk Street, Strand, W.C.2.

**Queues in Contemplation.**—Liverpool Corporation Tramways Committee have appointed several of their members, with the general manager, to visit towns where passenger queues have been introduced and to report with a view to obviating the present crushing at some of the principal points.

Digitized by Google

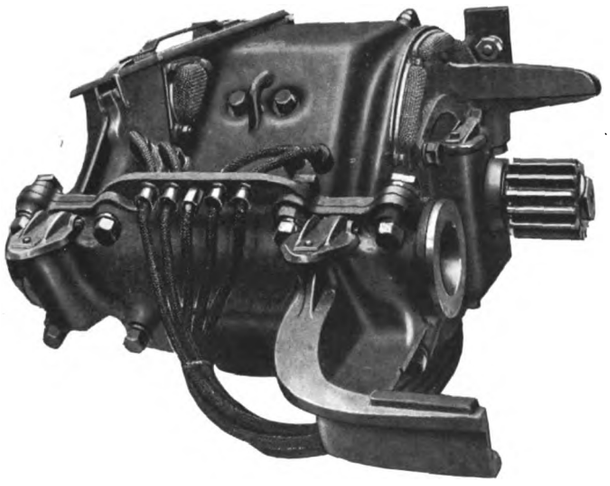
## THE DICK-KERR-30 VENTILATED TRACTION MOTOR.

The conditions under which tramway motors operate are well known to be the reverse of ideal. Such motors owing to their location are necessarily of limited dimensions, and have to operate for lengthy periods without attention, and this despite the inherently dirty conditions of their employment below the car.

For this reason the totally enclosed type of motor has been very largely favoured by tramway engineers in the past, as being practically dustproof and watertight, although total enclosure naturally reduces the continuous rating of such a machine owing to temperature limitations, due to the difficulty of dissipating the heat generated in the motor.

Many of the difficulties associated with the design and operation of tramway motors would be obviated if a really satisfactory system of ventilation could be provided, and with this object in view Messrs. Dick, Kerr and Company, Limited, have recently placed on the market a positively ventilated type of traction motor, which embodies all the features which the firm's long experience in this class of apparatus has shown to be essential to successful operation, and will strongly appeal to those engineers who favour the ventilated type of motor.

This machine, known as the D.K. 30, is of the interpole type and in general design follows the firm's

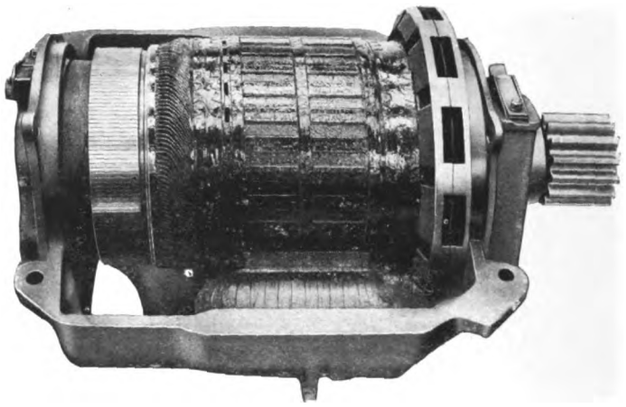


The D.K.-30 Traction Motor.

standard practice. It is, however, supplied with either a split frame (as illustrated) or box frame, which latter construction is now finding favour, particularly abroad. The frame itself is of high permeability cast steel, fitted with separately cast armature bearing boxes on either side, which are firmly bolted to the frame. This gives a very rigid construction, and one which facilitates dismantling for inspection, as the armature can be retained in position while the bottom half of the frame is removed or can be removed with it if necessary. The solid armature bearing boxes are also an effective preventative of oil creepage into the interior of the shell.

The main pole pieces are built up of laminated steel punchings, rivetted together, and are interchangeable and fitted with former wound coils; these coils are specially insulated to withstand moisture and high temperature conditions, and are firmly held in position by flat steel springs, by means of which any shrinkage of the coil is automatically taken up. The interpoles are solid steel, with field coils clamped in position by screws. The armature is of the firm's standard construction, special air ducts being provided in the case for ventilation purposes. To ensure that this ventilation is satisfactory and positive, a double flow exhaust fan of compact form is fitted to the armature which draws one current of air through the armatu e laminations, and another air current over the field coils.

This air enters the motor casing through inlets of considerable area, which are located behind the commutator lid, where they are protected from dust and

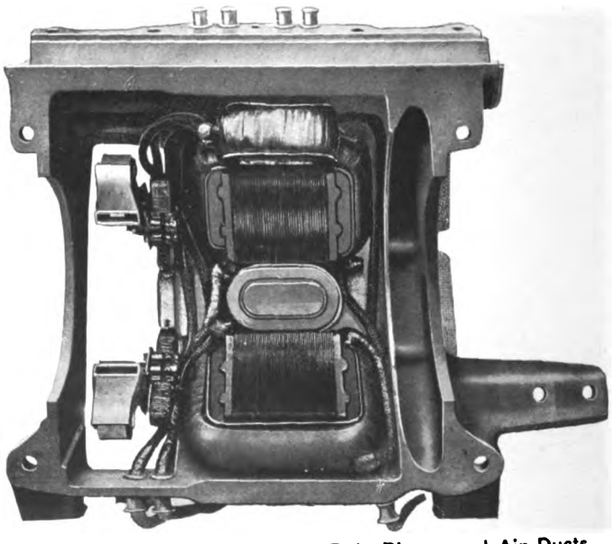


Armature with Double Flow Fan.

water, and is discharged through outlets at the pinion end, in a similarly protected position. Both the air inlets and outlets are fitted with coarse protective screens, shaped so as not to restrict the volume of air entering or leaving the air ducts.

The volume of air and its velocity are such that any dust entering the casing is carried right through and expelled, an operation which the smooth direct air passages greatly facilitates, as also the fact that no reversal of direction of air currents occurs in the motor.

The cooling effect resulting from this positive system of ventilation increases the continuous capacity of the



Top Half of Motor, Showing Pole Pieces and Air Ducts.

motor to 70 per cent. of the one-hour rated capacity, as compared with a value of only 40 per cent. with the unventilated type of motor.

It is unnecessary to emphasise the value of this feature as it is obvious that in tramway operation the capacity of the motor for continuous operation during periods of eight or ten hours is far more important than its one-hour rating, and due to the cooler running conditions the life of the insulation is greatly increased,

Digitized by Google

as it is unlikely to suffer from the effects of overheating. Furthermore, owing to the improved utilisation of materials a greater output can be obtained for a given weight, or stated in another way, a reduction in weight to be hauled can be made which represents a material saving in cost of operation.

The bearings of the armature, as well as those for the axle suspension, are lubricated by means of wool waste and horse-hair saturated in oil, a special channel being cast in the bearing box for oiling. The motor is also adapted for ring lubrication, and owing to the oil storage capacity provided, the bearings will operate for long periods without attention.

The motor is fitted with the firm's standard brush gear; the axle is provided with a forged steel pinion cut from the solid, which meshes with a cast-steel gear wheel, the gearing being enclosed in a malleable iron case supported from the frame.

The D.K. 30 motor is designed for one metre gauge and is rated at 40 H.P., when operating on 500 volts at a speed of 520 revolutions per minute. It is claimed that it represents a great advance in motor designs, even of the ventilated type, both in efficiency and all-round reliability, and it is specially adapted for use under the conditions met with in British tramway operation.

## ELECTRIC TRAMWAYS IN POLAND.

By ARTHUR E. GURNEY
(*Member Warsaw Engineers' Association*).

Since the inauguration, in 1908, of Warsaw's new tramways, the inhabitants of all the five principal Polish cities have enjoyed the advantages—not in every case unalloyed—of an electric tramway service. For although by far the most populous and important, Warsaw was the last of them to introduce electric traction in its streets.

The form of ownership and manner of exploitation vary considerably in the several towns. At the time war broke out the tramways of Lodz were the only remaining purely private undertaking, while those of Lwow (Lemberg) constituted the only completely municipal system, owned and worked entirely by the municipality. In Poznan (Posen) the tramways were still nominally a private business, but negotiations for their transference to the town were all but completed, whilst the tramways of Cracow were owned and controlled by a private company nearly all of whose shares had gradually been acquired by the municipality. The Warsaw tramways represent an unusual departure from precedent, for although the property of the town, they are worked by a group of capitalists under guarantee of certain minimum profits.

In the case of Cracow, the utility and profitableness of the service were further reduced by the circumstance that the cars were old-fashioned and uncomfortable, and the lines consisted of but a single track—a frequent cause of long stoppages. It is therefore not surprising that the average relative number of passengers carried daily was lower than in any other Polish city, amounting to less than one-sixth of the population. In this connection only the original Cracow, about three square miles in extent, with a population (in 1910) of 112,500, can be taken into account, as "Great Cracow," with its 152,000 inhabitants and area of 13 square miles had but recently been created by the inclusion of outlying districts, whose development had only just begun. There seems little doubt that in the near future, when the service is extended to the new areas, the whole system will be reconstructed. In 1910 the gross takings of the Cracow tramways amounted to £28,252, or £25 4s. per 100 of the city's inhabitants, and expenses to £20,367, leaving a net profit of £7,885, or £7 per 100 of the population. A tax levied by the municipality on the tickets sold realised £3,125.

The area and population of Poznan were both only a little larger than those of Great Cracow, but the tramway system was fully developed to serve the whole area. The proportion of the inhabitants who daily used the cars was only slightly higher than in Cracow, but the gross takings amounted in 1910 to £53,200 or £33 19s. per 100 of the population, and were more than double the amount received in 1901.

In Lwow the tramways are closely connected with the city's electric light and power supply, both being controlled by the same municipal department, and together forming the "Lwow electricity works," which are a credit to those responsible for their management, and a profitable source of income to the town. In 1908 the tramways were greatly extended, and a new supply station erected, the two schemes together costing £646,000.

The relative number of passengers carried daily by the Lwow tramways was greater than in any other Polish town, representing one-third of the city's population.

Lodz—the "Polish Manchester," as it is frequently called—was one of the first of the Polish cities to adopt electric traction. That the tramways were a real boon to the many workers of this busy and straggling town—which, with its 508,500 inhabitants (in 1912) covered an area of 12½ square miles—was proved by the fact that although passengers were not numerous at other times of day, the cars were always crowded during the hours of from 7 to 9 a.m. and 6 to 8 p.m., as well as at midday. Warsaw's new system of electric tramways were constructed and worked in accordance with an agreement entered into in 1905 between the municipality and a small group of financiers, which provided that the latter were to carry out the scheme at the expense and under the supervision of the former. The total cost of construction and equipment, including generating station, repair workshops, and sheds, was estimated at £673,360 (6,380,000 roubles), which amount was not exceeded. The group was to pay the town interest at the rate of 5½ per cent. per annum on this sum, besides a guaranteed minimum annual income of £42,428. In addition the town was to receive half the net profits realised, after payment of all expenses, including the above sums, and a sum of £63,325, representing the salaries of five members of the group, forming the board of directors. The group has the sole right of exploitation, for a period of fifteen years, expiring in 1922, and without its consent the municipality may not permit the introduction of any other means of communication in the streets of Warsaw.

The construction of the new system was begun in 1906, and the service made available to the public in the spring of 1908, a delay of a few months having been caused by the unsettled state of the country. The total length of line, consisting of double track throughout, is 31 miles, and the rolling stock consists of 200 trolley cars and 60 trailers, of the latest design and perfect finish. Both kinds have seating accommodation for 24 inside, and standing room for 16 on the platforms.

It is to be foreseen that Warsaw's tramway system will be greatly extended shortly after peace is restored. The inclusion in the city boundary of extensive suburban areas—whose inhabitants in 1909 numbered over 150,000—had been under consideration for some time previous to the war, and was carried out in 1916. The extension, as well as the proposed linking up of numerous outlying districts, will undoubtedly afford great opportunities to enterprising contractors, and it is to be hoped that at least some of the contracts will be secured by British firms.

LONDON, SEPTEMBER 12, 1918.

**London Traffic Reform.**

It is to be hoped that the public passenger transport interests of the metropolis will take advantage of the failure of the Home Office management of the police force to represent again to the Government that the time is opportune for setting up a Traffic Board for Greater London. The change in the person of the Chief Commissioner of the force is not likely to bring any amelioration of the grievances and hindrances to which the traffic authorities have too long submitted. The new commissioner is a military officer unacquainted with the imperative needs of the capital for the development of its transport system and the problems that sooner or later must be solved. Moreover, the new chief has distinguished himself as an autocrat who has defied both the Public Accounts Committee and the officials who were appointed to effect reforms in the staffing of the War Office. Hitherto the traffic authorities have been content to pass resolutions pressing upon successive Governments the need for carrying into effect the recommendations of the Royal Commission on London Traffic, but there are a number of circumstances that now combine to call for stronger action than petitions that meet only with acknowledgment. These circumstances concern not the advancement of sectional interests but the welfare of the metropolis and the surrounding districts. In the first place, the London County Council are faced with the necessity of spending a sum estimated at over two millions sterling for housing accommodation. The great bulk of that work must of necessity be carried out beyond the boundaries of the county, and with that object in mind the Council are about to hold conferences with the authorities of contiguous districts. The erection of great areas of new houses must entail road widenings and the construction of new roads. Most important of all, there will have to be great extensions of the tramways of various authorities, and possibly in some instances electric railway construction may be preferable. There may be cases, too, in which initial needs may be met by motor omnibuses. All these questions imperatively call for the formation of a co-ordinating and controlling authority in the form of a Traffic Board. Another great desideratum is that London should be freed from the blighting hand of one or two permanent officials at the Home Office. Those persons were no doubt just as much responsible as the late Chief Commissioner for the persistent ignoring of traffic needs, as exemplified by the opposition to trailer cars against the advice of the Board of Trade and the Home Office opposition to almost every Bill for tramway extension. The latest example of this unreasoning opposition is shown in the long drawn out objection of the police to discharge what is one of their primary functions, namely, the protection of the travelling public by the institution of queues at omnibus stopping points. In partially abandoning this attitude just before his retirement, the late commissioner pleaded that the formation of queues must entail extra expense upon the ratepayers for additions to the strength of the force. He failed to see that the ratepayers are not opposed to such an expenditure, for the strongest advocates of queues have been the metropolitan borough councils, which have been pressing the subject upon his attention for a year past. Equally weak was the contention of the late commissioner that queues will constitute a

Digitized by Google

danger to pedestrians using the pavements. This argument becomes absurd in relation to such places as Trafalgar Square. The success of an experiment by the omnibus company at Hammersmith nearly two years ago shows that the innovation can be adopted at the Square with the greatest ease. The present situation presents an opportunity that should not be lost for pressing on the movement for traffic reform for which London has waited so long. In this era of reconstruction the prospect is more favourable than at any previous period. In the present President of the Board of Trade the Prime Minister has an expert and trusted adviser. To delay now may entail years of waiting.

---

**Women's Wages.** A serious situation has been created by the award of the Committee on Production published on August 30, which is given in full elsewhere in this issue. The award conceded the claim that the total remuneration, including war bonuses, paid to tramway and omnibus women employees must be the same as that paid to men, if the women are doing what is called the same work. As is well known, the women conductors who do "the same work" as the men are really much more costly to employ, because of the larger percentage of absenteeism which necessitates the engagement of many spare hands, and because new women have continually to be trained to replace those who abandon the work. The award of the Committee on Production will greatly add to the financial difficulties of tramway and omnibus undertakings, and it is problematical whether anything like adequate relief will be obtained under the Statutory Undertakings (Temporary Increase of Charges) Act of this year. Certainly there will be much delay in securing the approval of the Board of Trade to changes which the tramway authorities may regard as necessary. Serious as the increased cost entailed by the award will be, the outlook for the future is even more threatening. It was only on July 9 last that the Committee, after careful consideration of the case presented by both the employers and the employees, made an award refusing to grant to the women an additional advance of 5s. a week which they granted to the men. Such awards are supposed to stand for four months before there can be any appeal or re-hearing, but the London omnibus women conductors struck work in the middle of August. They were supported by the men's trades unions in defiance of the advice of their leaders; and the intimidated Government at once called on the Committee on Production to reconsider the matter. The result was a foregone conclusion; the women were given the desired advance with the least possible delay. The Committee on Production, to justify the reversal of their previous decision, pointed out that up to the time when that award was given a 12½ per cent. bonus had been confined throughout to men. Since July 9, however, the Minister of Munitions had granted an advance of 5s. to women munition workers, and for this reason the Committee thought it necessary to give it also to the women tramway and omnibus workers, without reference apparently to the justice of their claim. The Committee, however, evidently feel considerable anxiety as to the future, and they recommend that the whole question of women's wages should be made the subject of a special inquiry. The Government, prepared beforehand for this proposal, simultaneously announced the appointment of a Committee to inquire into the whole subject. All industrial occupations in which women are employed are apparently to be brought under review. What the future holds no one can tell, but the prospect seems to be one of indefinite increases in wages, and consequently of indefinite increases in the cost of materials and in the cost of living. Unless the Minister of Reconstruction can discover some remedy which is not now apparent, something like industrial anarchy may result when wages begin to come down after the war. The object of the men's trade unions in supporting the women's demands for equal pay is tolerably clear. They desire to create such a condition as will prevent the women from continuing to be employed after the war. Men will then be available, and if they can be had at the same wages as women they will in many occupations be preferred by employers. It is possible that the women will find that they have been short-sighted in their insistence upon equal pay for what is not in fact equally valuable service.

**Traffic Control at Street Junctions.**

As one outcome of two days' absence at the majority of busy London junctions of police supervision of traffic, the question may be asked whether it is advisable to hold up periodically the various lines of traffic in order to relieve each stream in turn. At junctions traversed by tramways the County Council tramways department had placed inspectors with red flags to facilitate the car traffic, but their services were rarely requisitioned. Drivers of all vehicles continued on their way while the road ahead was clear, and traffic from a cross direction remained stationary until an opening presented itself. It is generally admitted that under these circumstances the junctions were less congested than when point policemen were on duty. Pedestrians suffered no inconvenience. They found their way across the roads at the head of a halted line, and, more often than not, through the intervals between vehicles in slow motion, while at the Elephant and the Mansion House, where subways exist, foot passengers had no need to concern themselves with above-ground conditions. The absence of police served to demonstrate the hollowness of all that has been said concerning the magic sweep of the arm of the point duty constable by writers who apparently have never seen traffic controlled at the great provincial centres. As to police control at junctions in general, the question may be asked whether the time has not arrived for the trial of a system of signal posts, such as are to be seen in American cities, operated from an elevated cabin. That method would do away with the risk to life and limb, involving such a fatality as that which occurred to a constable at Ludgate Circus a few years since. In view of the experience at the junctions during the absence of the police it would also be worth while for experiments to be made under official direction for the purpose of definitely ascertaining which method—control or non-control—leads to least congestion. Heads of the police force ought to be the first to approve of a trial. All inquiries go to show that where there was no artificial hold-up of traffic there were either none, or at least fewer, blocks. As it is perhaps hopeless to expect Scotland Yard to take an unbiassed attitude on this matter, the tramways department of the County Council might invite their inspectors to report upon their two days' experience, with a view to elucidating the aforementioned point. No doubt in the provinces it would be an easy matter for managers to arrange with the police for the carrying out of experiments.

---

**Coal Economy.**

Elsewhere in this issue reference is made to the final report of the Coal Conservation Committee of the Ministry of Reconstruction, which has presented the reports of various sub-committees. The first of these was the report of the Electric Power Supply Sub-Committee, a long abstract of which was given in our issue of January last. Among the other reports which are dealt with in our present issue is that of the Mining Sub-Committee, one of the most interesting features of which is a proposal for the creation of a Ministry of Mines and Minerals. In spite of the number of new Ministries that have been formed since the war began, there seems to be a good case for this proposal. The work now done by various departments and committees could be brought under one control, and a great deal of work now not done at all could be carried out to secure economy and efficiency, both in the mining and the consumption of coal. It is interesting to observe in connection with the report of the Carbonisation Sub-Committee that that body is of opinion that the introduction of carbonisation and gasification processes for the preparation of coal as a preliminary for its use for steam raising is still an open question. The Sub-Committee also, while agreeing that the use of large turbo-generator units is essential to economy in large power-stations, consider that there is a definite field for the use of gas engines in special circumstances, and in cases where the most suitable units are of relatively small size, say only 3,000 or 4,000 KW. This is particularly interesting in view of the history of the employment of gas engines in power stations. The Sub-Committee anticipate important developments in the design and use of these engines. A detailed study of the various reports should be made by all interested in coal, whether as producers or consumers.

# TRAMWAY AND OMNIBUS WORKERS' WAGES.

## A STRIKE FOLLOWED BY A NEW AWARD BY THE COMMITTEE ON PRODUCTION TO WOMEN WORKERS.

The women employees in the tramway and motor omnibus industry have been completely successful in their agitation to obtain wages equal to those paid to the men. After the award by the Committee on Production on July 11, which was given in full in our issue of August 15, there was widespread dissatisfaction with the refusal of the Committee to grant to the women the additional bonus of five shillings per week which was given to the men. An agitation was immediately commenced, and as a consequence an extensive strike broke out suddenly in the London area on Saturday, August 17, when the tramway service was practically stopped. It was estimated that within two days 10,000 employees ceased work and 3,000 vehicles, including those of the company-owned undertakings, were taken off the streets. The strike also extended to several towns in the provinces. This action was against the wishes of the officials of the trades unions, who were, however, powerless to influence the employees to continue their duties. Sir George Askwith, Chief Industrial Commissioner, promptly intervened, but the strike continued until August 22, when the employees decided by a large majority to return to work pending the consideration by the Committee on Production of the question of whether or not the women employees should be placed on an equality with the men employees in the matter of wages. On August 23 there was a general resumption of work in the metropolitan area and in the provinces. The Committee on Production, after meeting representatives of both parties, issued on August 29 their award, which was as follows :—

### TEXT OF THE AWARD.

1. The parties to this reference are (1) the Municipal Tramways Association, the Tramways and Light Railways Association, the London United Tramways (Limited), the Metropolitan Electric Tramways (Limited), the South Metropolitan Tramways (Limited), the London General Omnibus Company (Limited), the London Omnibus Section of Messrs. Thomas Tilling (Limited), the National Steam Car Company (Limited), the Croydon Corporation, and the British Automobile Traction Company (Limited) (London Branch), and (2) the National Transport Workers' Federation.

2. The claim submitted was as follows :—

(*a*) Interpretation of Committee on Production awards, viz., whether under Clause 14 of the award of July 9, 1918, the Committee intended to nullify any agreements or undertakings, and in particular any such undertaking as is alluded to in Clause 4 of the award of March 8, 1918.

(*b*) That equal total payments be made to women as to men for equal work in the tramway and omnibus undertakings, parties to the awards of March 8 and July 9, 1918.

(*c*) That any present change of payment should date from the beginning of the first full pay day following July 9, 1918.

(*d*) That any future changes of payments should take place conjointly with those of the men.

In the case of the Croydon Corporation the application submitted included a claim for the extension to the employees of that authority of the awards of March 8 and July 9, 1918, for tramway and motor omnibus employees.

3. The matter was referred by the Ministry of Labour to the Committee on Production for settlement, and representatives of the parties were heard on August 26 and 29, 1918.

4. The award of March 8, referred to in the claim, dealt with an application for an advance of wages for male and female employees engaged in connection with tramways and motor omnibus undertakings. The award provided for certain increases to men and women aged eighteen years and over, and to boys, youths, and girls under eighteen years, in those cases where the terms of employment include an undertaking that women should be paid the same rates as the grades of men whose places they had filled, the Committee gave the same advance as to men, that is, a total of 20s. a week over pre-war rates. In the case of women not covered by such an undertaking the Committee gave an increase of 4s. a week, subject to a maximum of 20s.

5. The claim dealt with in the award of July 9 was for an increase of 12½ per cent. upon the present total earnings, or for a standard increase equivalent thereto, and for such a revision of the award of March 8, 1918, as would provide for equal payment for women as for men, both as regards war wages and basic rates. By their award of July 9 the Committee increased the war wage advance already paid to men aged twenty-one years and over from 20s. to 25s. a week, such advance being intended to cover any claim with respect to the bonus of 12½ per cent. The Committee found that the claim with respect to the bonus of 12½ per cent. in the case of women had not been established, and they came to a similar decision with regard to the application for the revision of the award of March 8.

6. Subsequently to the issue of the award the employees of the London General Omnibus Company and certain other passenger transport companies in the London area struck work, expressing dissatisfaction with the terms of the award, and pressing for consideration of the question of the relation of the wages of men and women. Negotiations ensued between the employees and the Ministry of Labour, as the result of which the employees resumed work, and the matter was referred to the Committee on Production under the headings set forth in Clause 2 of this award. The Committee think it right to point out that the circumstances which have led up to the submission of the present claim and its reference to them have necessarily influenced them in considering and dealing with the matter.

### The Claim for Equal Pay.

7. In dealing with the claim that equal total payments be made to women as to men for equal work, it is necessary to distinguish between the elements of which these total payments are composed, The payments made to the men contain the following three elements, viz. :—(1) The base rate of wage ; (2) the additions made thereto since the outbreak of war by way of war bonus or war wage advance, with a view to meeting the increased cost of living ; (3) the addition of 5s. per week granted under the award of July 9, as a war wage advance to include and to be deemed to be in full settlement of any claim with respect to the bonus of 12½ per cent.

8. In considering the last-mentioned 5s. per week regard must be had to the origin and purpose of the 12½ per cent. bonus and to the circumstances which have led to its various extensions. The original grant of the bonus by the Minister of Munitions under the powers conferred upon him by the Munitions of War Act, 1917, and all subsequent extensions of the bonus by orders of the Minister, or by agreements or awards, have been confined to male workers twenty-one years and over. Under these circumstances the Committee, in adjudicating on the claim of women workers on tramways and motor omnibuses by their award of July 9, 1918, did not feel justified in treating the bonus as one which could properly be extended to women or be made the subject of a compensatory advance of wages.

9. Since the issue of the award of July 9, however, the Minister of Munitions, in pursuance of his statutory powers, has granted to female workers employed on or in connection with munitions work an advance of 5s. per week, which may be assumed to contain an element of compensation for their exclusion from the 12½ per cent. bonus. The policy indicated by that grant, and by the reference to the Committee by the Ministry of Labour of the renewed claim on behalf of the women concerned in this case, for some advance in lieu of the bonus, and the circumstances mentioned in Clause 6 of this award, makes it necessary for the Committee to consider the position as it at present exists, and they have arrived at the conclusion that the women concerned should have the advance granted by Clause 10 of this award, such advance to be deemed to include and to be in full satisfaction of any claim in respect of the 12½ per cent. bonus.

10. With regard to item (*b*) of the claim so far as it relates to an application for an increase of wages, the decision of the Committee is as follows :—

(1) To those grades of women aged eighteen and over, whose terms of employment include an undertaking that they shall be paid the same rates as the grades of men whose places they have filled, there shall be paid such advance as shall give 25s. per week over the pre-war rates of the grades concerned, payment to be made on the basis of a week of six days or six shifts.

(2) In the case of women aged eighteen and over, not covered by Clause 10 (1), the advances now being paid shall be increased by 5s. a week, subject to a maximum of 25s. a week over the pre-war rates of the grades concerned, payment to be made on the basis of a week of six days or six shifts.

(3) The increases hereby awarded shall take effect as from the beginning of the first full pay following July 9, 1918. They are to be regarded as war wages and recognised as due to and dependent on the existence of the abnormal conditions now prevailing in consequence of the war.

11. As regards item (*a*) of the claim, the award of July 9, 1918, does not nullify any agreements or undertakings in existence between any of the parties to the award, relating to the payment of women.

12. As regards the items mentioned in Clause 7 of this award and numbered (1) and (2), the claim submitted covering these items is put forward in such a form as to involve the determination of a general principle applicable, if adopted and established, not only to women employed on tramways and motor omnibuses, but to women employed in many other industries. Such a principle can only be decided on a national basis after full, comprehensive, and detailed investigation, with due regard to the far-reaching financial and economic considerations involved, and after hearing all interests that would be affected, including those women (if any) engaged in other industries, whose interests might be considered by them to be affected. The Committee therefore recommend that the whole question of women's wages and advances should be made the subject of a special inquiry, in which women can take part, and at which all the facts and circumstances which must be taken into account

Digitized by Google

before any general guiding principle can be safely or properly formulated, may be fully investigated and considered.

13. In regard to item (*d*) of the claim, the Committee approve of the principle that when general changes of wages are under consideration the wages of women, as well as men, should be considered, and they recommend that the parties should formulate an agreement, providing for a regular procedure for the periodical consideration and review of wages in the industry concerned.

14. As regards the claim submitted in the case of the Croydon Corporation for the extension to that authority of the awards of March 8 and July 9, the Committee suggest that the parties should meet with a view to arriving at a settlement between themselves on the matter. If any points then remain on which the parties are unable to agree, it shall be open to either side to ask the Committee to give a decision thereon, and, if necessary, to arrange for a further hearing to afford the parties an opportunity of stating their case before the Committee.

GEORGE S. GIBB. F. B. BUTTON.
WILLIAM W. MACKENZIE. JOHN BARKER.
JOHN M. DENNY.

## A COMMITTEE ON WOMEN'S AND MEN'S WAGES.

On August 29 also the following official announcement was issued :—

The Government have decided to appoint a Committee "to investigate and report as to the relations which should be maintained between the wages of women and men, having regard to the interests of both, as well as to the value of their work. The recommendations should have in view the necessity of output during the war, and the progress and well-being of industry in the future."

The Committee will consist of Mr. Justice Atkin (Chairman), Dr. Janet Campbell, Sir Lynden Macassey, K.C., Sir W. W. Mackenzie, K.C., and Mrs. Sidney Webb. Lieutenant-Colonel Sir Matthew Nathan (secretary to the Ministry of Pensions) has been appointed as secretary to the committee.

Communications on matters concerning the committee should be addressed (till further notice) to the Secretary, No. 2, Whitehall Gardens, S.W.1.

## THE CASE FOR THE EMPLOYERS.

The following statement briefly summarises the case of the employers against the concession to women of the additional bonus, and explains their view of the claim that women employees should be paid the same wages as men :—

From time to time since the outbreak of war applications for increased remuneration have been made by tramway and omnibus employees, and an agreement was come to in February of this year between the National Transport Workers' Federation and organisations representative of the employers, that such applications would be dealt with on a national basis, and, failing agreement, would be submitted to the arbitration of the Committee on Production, whose findings would be binding on both sides, and would not be subject to review under periods of four months.

In March last an award was given, involving the employers in additional payments of hundreds of thousands of pounds per annum. In July the Transport Workers' Federation submitted a new claim for (1) payment of a bonus of 12½ per cent. on total earnings to men and to women, and (2) equal payments to women as to men both as regards basic rates and war wages.

In accordance with agreement, this claim was submitted to the Committee on Production, who, after a careful hearing of the statements of both sides, made an award to the following effect :—(1) That an additional war wage of 5s. per week (making a total war wage advance of 25s. per week) be paid to able-bodied men in full settlement of any claim with respect to the 12½ per cent. ; (2) that the claim for the payment of 12½ per cent. to women had not been established ; (3) as regards the claim for the payment of the same basic rates and war bonuses for the women as for the men, the award was as follows :—"It was stated on behalf of the employers at the hearing that they accepted the principle that in cases in which women are doing the same work as men, and doing it as efficiently, and provided their employment does not involve increased expenditure compared with the employment of men, they should be paid the same wages as men.

ADDITIONAL COST OF WOMEN EMPLOYEES.

"They showed, however, that in the case of tramway and motor omnibus undertakings a large number of women employees stay only a comparatively short time, and their attendance is less regular than that of men, necessitating the keeping of a large spare staff, which adds to the cost of employing women. The decision of the Committee with reference to the application that the award of March 8, 1918, shall be revised so as to provide for equal payment to women and men both as regards war wages and basic rates is that the claim has not been established."

In the whole of the undertakings in London where the present strike originated the basic rate of wages to women is the same as that paid to men. The decision of the Committee on Production in withholding from women any payment in respect of an application for 12½ per cent. has followed the practice of all Government departments in connection with the matter. Throughout the country there has not been, in any industry, any award for the payment of 12½ per cent. or any sum in lieu thereof to women.

The question raised is therefore a national one of first importance, as if the present application is carried into effect in regard to tramway and omnibus women, it would, logically, raise for similar consideration the whole question of the remuneration of women engaged in munitions and all other forms of industry. The strike in London, without any notice to the employers or to the public, and in direct contravention of the instructions of the National Transport Workers' Federation, the agreed negotiating body, is against an award of the official Committee on Production, set up by the Government to deal with wages disputes. If the decisions of such Committee are to bind only one of the parties to a dispute, then the whole of the machinery of the Munitions of War Acts, under which such differences are to be dealt with and awards made, is rendered useless.

## STRIKE ON THE TUBE RAILWAYS.

The services of the tube railways in London were considerably interrupted from August 24 to August 27, owing to a strike in which a large number of employees participated. The strike, which was undertaken, generally speaking, without any preliminary backing on the part of the trade unions concerned, arose out of a question of wages, owing to the dissatisfaction felt among the women employees at having received a bonus of only 12s. 6d., as against 25s. awarded to the men employees, and to the wish to assert the principle of equal pay for the same class of work, whether done by men or women. The train service was kept up very well, this result being facilitated by the closing of several of the less important stations on the Bakerloo, Piccadilly, Hampstead, and City and South London tubes. On August 26 the strikers decided to resume work on August 28, but many anticipated the decision by returning to their posts on August 27. It was understood that the strike was abandoned with a view to subsequent consideration of the claim for equal pay. This claim is presumably one of the subjects which is before the Committee which the Government have appointed to inquire and report in regard to men's and women's wages.

**A Decimal Coinage Commission.**—A Commission has been appointed to "consider and report whether it is advisable to make any changes in the denominations of the currency and money account of the United Kingdom with a view to placing them on a decimal basis, and whether, if an alteration of the present system is recommended, it is desirable to adopt, with or without modification, the proposals embodied in the Bill recently introduced in the House of Lords by Lord Southwark, or some other scheme, and in the latter alternative to make specific recommendations for consideration by Parliament." The Commission is to consist of Lord Emmott, Lord Southwark, Lord Faber, Lord Ashton of Hyde, Lord Leverhulme, Sir Richard Vassar-Smith, Sir Joseph Larmor, Sir George C. Marks, Sir Alfred Watson, Mr. J. W. Causton, Mr. S. A. Smith, Mr. C. Godfrey, Mr. James Bell, Mr. Joseph Burn, Mr. Harold Cox, Mr. G. Hayhurst, Mr. Theo. McKenna, Mr. G. Marks, Mr. J. F. Mason, Mr. Albert Smith, Mr. G. M. Smith, Mr. G. C. Vye. The Commission is empowered to call witnesses and to examine books, documents, registers, and records. Pending the appointment of a secretary, which will be announced later, communications may be addressed to "The Royal Commission on Decimal Coinage," Treasury Chambers, London, S.W.1

**"Safety First" in Darkened Streets.**—With a view to obviating a probable increase of accidents as a result of the further restricted street lighting, the London "Safety First" Council offers the following advice to pedestrians in the streets after dark :—(1) Look to the right before crossing the road ; (2) cross the road from a street lamp ; (3) make full use of street refuges ; (4) always face approaching traffic. The Council points out that if all pedestrians kept to the left, instead of to the right, of the footpath on which they are walking, people would not step off the kerb into the road with their backs to oncoming vehicles, one of the chief causes of accident.

**Fund for Loyal Croydon Employees.**—A fund inaugurated by a local resident for the purpose of making a recognition of the loyalty of those Croydon Corporation tramways employees, about fifty, who remained at work during the recent strike, has received substantial support, and a total of about £70 has been subscribed. It is proposed to close the fund on September 14, and the subscribers will be consulted as to the disposal of the money contributed. The treasurer is Mr. T. G. Dyson, 19 George Street, Croydon.

# TRANSPORT IN RELATION TO AGRICULTURAL DEVELOPMENT.

In the recently-issued report of the Sub-Committee on Agricultural Policy (appointed by the Reconstruction Committee) considerable attention is devoted to the question of transport, especially as regards light railways and road motor vehicles. The report states, among other things :—

The general question divides itself under two heads :—(*a*) Facilities for, (*b*) cost of, transport. Dealing first with (*a*) facilities for transport, this again may conveniently be sub-divided into those where the distances to be covered are respectively long and short, ordinary railways and canals coming within the former and light railways and motor services within the latter category. It is not possible to define with exact precision the different spheres of activity of light railways and of motor services. In one district, where the farm buildings are accessible by good roads to motor vehicles, a motor service may best meet the need. In another district, where the farm buildings generally lie off the made roads, and are accessible only by unmade and often steep tracks, a light railway may be preferable.

### Light Railway Movements. Comparative Failure.

It is in connection with short distance transport that we look for the greatest improvement. These facilities should be provided as feeders for ordinary railways with the object of expediting and cheapening delivery to distant markets. Whether development will best proceed in the direction of an extension of the light railway systems or by the organisation of motor transport services, or by a combination of both, remains to be seen.

In view of the large areas of land in good agricultural districts which are still four or five miles from the nearest railway, it is disappointing that the light railway movement has not proceeded with greater rapidity. Doubtless this has been due in part to the comparatively close network of ordinary railways which exist and in part to the initial cost of promoting light railway schemes, but mainly, perhaps, to the difficulty in finding capital for an object from which the direct financial return is uncertain. This latter view is borne out by figures showing the number of schemes which have come under the consideration of the Light Railway Commissioners. In 52 cases Class A lines (i.e., lines on lands acquired, mostly steam motive power and such as would usually be employed for the carriage of agricultural produce), covering in all 532§ths miles have been constructed ; in 137 they have been authorised and the projects are still in being, though construction has not been commenced ; in 100 they have been approved, but not yet authorised ; while in 662 they have been authorised, but have since been abandoned owing to the necessary capital not having been subscribed.

The promotion of schemes received an impetus through the passing of the Light Railways Act, 1896. Between December, 1896, and the end of 1899, 122 applications in respect of railways Class A were received, involving 1,625 miles of line, estimated to cost nearly nine and a half millions sterling. Since then the number has dwindled appreciably, the total applications between the date last mentioned and the middle of 1917 being only an additional 135, for 1,150 miles of line at an estimated cost of about ten millions sterling. In view of these figures, the mileage of Class A lines constructed (532§ths miles) cannot be looked upon as other than disappointing, especially in view of the large amount of good agricultural land still without railway facilities. The comparative failure of the light railway movement has been attributed to the large cost of the Class A lines, which we understand averages about £7,000 per mile, and the difficulties experienced in obtaining capital. How this should be remedied would seem to be outside the scope of our reference, but we are of opinion that the matter is one deserving of careful inquiry by a competent authority.

### Development of Motor Traction.

The development of the mechanical road car would seem to have opened out new possibilities. Such a form of transport has the advantage that it is not restricted to a particular route, but can be organised to touch any points where needed, and, by calling at individual farms, may enable horses and men, which would otherwise be engaged in the delivery or collection of goods, to be more profitably employed in the cultivation of the land or other farm work.

As an example of the existing uneconomic method of delivery, an instance has been quoted of half a dozen farmers sending half a dozen carts twice a day along the same road to deliver a few churns of milk at a railway station, each as a rule bringing back merely an empty churn or two.
